Abbreviations	xxix

PART I Introduction to massive MIMO and cellular networks

CHAPTER 1 Introduction	3
1.1 What Is Massive MIMO?.....	3
1.2 How Does Massive MIMO Work?.....	5
1.2.1 Massive MIMO Radios.....	5
1.2.2 Massive MIMO Features	7
1.3 Why Is Massive MIMO Used?	9
1.3.1 Benefits of Massive MIMO in the Mobile Networks	9
1.3.2 Why Now?	11
1.4 Academic Work.....	14
1.5 Summary.....	15
References.....	16
 CHAPTER 2 Cellular Networks	 17
2.1 Cellular Network Basics	18
2.1.1 Radio Communication Procedures	19
2.1.2 Scheduling.....	21
2.2 Spectrum.....	23
2.2.1 Global Alignment.....	23
2.2.2 Spectrum Characteristics and Allocation for Mobile Communication.....	24
2.3 Radio Site Deployments.....	26
2.3.1 Radio Site Installation.....	26
2.3.2 Main Site Types	28
2.3.3 Functionality	29
2.4 Network Services	30
2.4.1 Services Offered by Mobile Networks.....	30
2.4.2 MBB Traffic and Its Characteristics	31
2.5 Network History	35
2.5.1 Analog Networks – 1G.....	35
2.5.2 Digital Networks – 2G.....	35
2.5.3 Voice and Mobile Data Networks – 3G and HSPA	36
2.5.4 Mobile Data Only – 4G.....	37

2.5.5	Advanced Mobile Data and First Step Toward New Services – 5G.....	38
2.5.6	Advanced Mobile Data and Intrinsic Design for New Services – 6G	39
2.6	Summary.....	39
	References.....	40

PART II Fundamental Concepts, Massive MIMO Techniques and 3GPP Standardization Support

CHAPTER 3	Antennas and Wave Propagation	43
3.1	Introduction	43
3.2	Properties of Electromagnetic Waves.....	45
3.2.1	Instantaneous and Average Power Flow	46
3.2.2	Wave Fronts	46
3.2.3	Polarization	47
3.2.4	Superposition.....	50
3.2.5	The Electromagnetic Spectrum.....	51
3.3	Transmission and Reception of Electromagnetic Waves: Basic Antenna Concepts	52
3.3.1	Infinitesimal Dipole	53
3.3.2	Near Fields and Far Fields.....	53
3.3.3	Antenna Polarization.....	53
3.3.4	Radiation Pattern.....	55
3.3.5	Reciprocity of Antenna Characteristics.....	57
3.3.6	Isotropic Antenna.....	57
3.3.7	Antenna Properties.....	58
3.3.8	Antenna Size, Gain, Lobe Width, and Frequency Dependence	61
3.4	Transmission and Reception of Electromagnetic Waves: Free-Space Propagation.....	62
3.4.1	The Reciprocal Radio Channel.....	62
3.4.2	Friis' Equation.....	63
3.5	Wave Propagation in Real-World Environments	65
3.5.1	Path Loss and Shadow Fading.....	66
3.5.2	Building Penetration Loss.....	67
3.5.3	Multi-path Propagation	69
3.6	Modeling of Wave Propagation and the Transmission of Communication Signals	77
3.6.1	Directional Propagation Channel.....	78
3.6.2	Radio Channel.....	81
3.6.3	Stochastic Models	87
3.6.4	Site-Specific Propagation Models	90

3.7	Summary and Discussion.....	92
	References.....	93
CHAPTER 4	Antenna Arrays and Classical Beamforming.....	95
4.1	Introduction	95
4.2	Arrays with Two Elements	98
4.2.1	Assumptions	99
4.2.2	Received Signal in a Free-Space Channel	101
4.2.3	Gain and Array Factor	102
4.2.4	Properties of the Gain	104
4.2.5	Extension to Narrowband Signals	107
4.3	Uniform Linear Arrays with More Than Two Elements	107
4.3.1	Assumptions	108
4.3.2	Array Response Vector and Beamforming Weight Vector	110
4.3.3	Uniform Linear Arrays	112
4.4	Beamforming.....	116
4.4.1	Classical Beamforming.....	117
4.4.2	Uniform Linear Arrays	119
4.4.3	Beamforming Beyond Basic Beam Steering.....	122
4.5	Dual-Polarized Uniform Planar Arrays	124
4.5.1	Uniform Planar Array	125
4.5.2	Dual-Polarized Arrays.....	128
4.6	Arrays of subarrays	131
4.6.1	Partitioning an Antenna Array into an Array of subarrays.....	132
4.6.2	Gain Patterns	135
4.7	Summary.....	137
	References.....	138
CHAPTER 5	OFDM-Based MIMO Systems.....	141
5.1	Introduction	141
5.1.1	Orthogonal Frequency Division Multiplexing	141
5.1.2	Outline.....	142
5.2	Single-Antenna OFDM Transmission and Reception.....	143
5.2.1	Orthogonal Frequency Division Multiplexing Modulation and Demodulation	145
5.2.2	Cyclic Prefix and Time Dispersive Channel.....	146
5.2.3	Frequency Domain Model and Equalization.....	147
5.2.4	Multiplexing on a Time–Frequency Grid	149
5.2.5	Low PAPR OFDM – DFT-Precoded OFDM.....	150

5.3	Multi-antenna OFDM Transmission and Reception	152
5.3.1	Frequency Domain Model	154
5.3.2	Spatial Structure of the MIMO Channel	159
5.3.3	Spatial Correlation Matrices	165
5.4	Radiation and Receiving Patterns	168
5.4.1	Measuring Radiation Pattern in Transmit Direction	169
5.4.2	Measuring Receiving Pattern in Receive Direction	171
5.4.3	Radiation/Receiving Patterns and Effective Channels Are the Same	172
5.5	What Is a Beam?	173
5.5.1	A Beam in the Transmit Direction	176
5.5.2	A Beam in the Receive Direction	180
5.6	Summary	181
	References	182
CHAPTER 6	Multi-Antenna Technologies	183
6.1	Basic Dynamic Channel-Dependent Beamforming Concepts	184
6.1.1	The Two Categories of Classical and Generalized Beamforming	186
6.1.2	Simple Narrowband Models	193
6.1.3	Classical Beamforming for Pure Line of Sight	193
6.1.4	Generalized Beamforming for a Multi-Path Channel	196
6.1.5	The Confusing Beamforming Terminology	198
6.1.6	Classical Versus Generalized Beamforming	199
6.1.7	Beamforming and Impact on Inter-Cell Interference	203
6.1.8	Nullforming – Explicit Inter-Cell Interference Mitigation	205
6.2	Semi-Static Beam Concepts for Cell Shaping	207
6.2.1	Brief Background on Ordinary User Equipment to Cell Association	207
6.2.2	Cell Shaping as a Means for Adapting the Cell Coverage	208
6.3	Spatial Multiplexing	210
6.3.1	Received Data Model	212
6.3.2	Spatial Filtering on Receive Side to Extract Layers	213
6.3.3	Precoding on the Transmit Side	215
6.3.4	Does Spatial Multiplexing Always Provide Gain?	222
6.3.5	Channel Properties Matter!	225
6.4	Channel State Information for TX Precoding	235
6.4.1	Closed-Loop Channel State Information Feedback	236
6.4.2	Reciprocity-Based Channel State Information	243
6.5	Radio Alignment	246
6.5.1	Radio Misalignment Model	247
6.5.2	Separate Alignment Requirements for Transmitter and Receiver	247
6.5.3	Model for Misalignment of Transmitter Relative Receiver	249

6.5.4	Alignment of Transmitter Relative Receiver	250
6.6	Coordination in the Form of Coordinated Multipoint.....	251
6.6.1	Relation Between Cell, Sector, Point, and Base Station	252
6.6.2	Beamforming for Coordinated Multipoint	254
6.6.3	Downlink Joint Transmission	255
6.6.4	Dynamic Point Selection	256
6.6.5	Uplink Joint Reception	257
6.6.6	The Term Distributed MIMO and Its Relation to CoMP and mTRP	259
6.7	Massive MIMO in Commercial Networks – Putting It All Together	260
6.7.1	Fast Fading Reciprocity Challenged by Network Trends.....	261
6.7.2	Downlink SU-MIMO Versus MU-MIMO and Number of Layers.....	265
6.7.3	Uplink SU-MIMO Versus MU-MIMO and Number of Layers	267
6.7.4	The Pitfall of Unfair SU-MIMO Versus MU-MIMO Comparisons.....	269
6.7.5	Simpler Signal Processing or Fewer Antennas?	275
6.7.6	How Close Are Commercial Deployments to “Infinitely Many Antennas?”	276
6.7.7	Challenges With Limited User Equipment Capabilities	276
6.8	Summary.....	277
	References.....	279
CHAPTER 7	Massive MIMO Network Performance.....	281
7.1	Outline and Summary	281
7.1.1	Cell-Specific Beamforming	283
7.1.2	UE-Specific Beamforming.....	285
7.1.3	Relations Between Cell-Specific and UE-Specific Beamforming.....	286
7.1.4	Multi-user MIMO	286
7.1.5	Additional Massive MIMO Performance Aspects	288
7.1.6	Mobile Broadband Massive MIMO Performance in Macro Network Deployments.....	289
7.2	Radio Network Simulations	292
7.2.1	Overview	292
7.2.2	Antenna Configurations	293
7.2.3	Multi-antenna Algorithms.....	298
7.2.4	Performance Metrics.....	299
7.2.5	Traffic Characteristics.....	300
7.2.6	Deployment Characteristics	302
7.2.7	System Assumptions	307
7.3	Cell-Specific Beamforming	308
7.3.1	Overview	308
7.3.2	Fixed Beamforming	310

7.3.3	Cell Shaping	314
7.3.4	Higher-Order Sectorization	316
7.4	UE-Specific Beamforming (SU-MIMO)	318
7.4.1	Overview	318
7.4.2	Impact of Different Antenna Configurations	319
7.4.3	Beamforming Effects on Signal Power and Interference	324
7.5	Relation Between Cell-Specific and UE-Specific Beamforming	328
7.5.1	Overview	328
7.5.2	Combining Cell-Specific and UE-Specific Beamforming	329
7.5.3	Cell Shapes and Beam Sweeping	330
7.6	Multi-User MIMO	332
7.6.1	Overview	332
7.6.2	Feedback-Based MU-MIMO	333
7.6.3	Reciprocity-Based MU-MIMO	336
7.6.4	Reciprocity-Based MU-MIMO With Inter-cell Interference Handling	337
7.7	Additional Massive MIMO Performance Aspects	341
7.7.1	Coverage Aspects of Beamforming	341
7.7.2	Uplink Spatial Receiver Combining	345
7.7.3	High-Band Aspects	349
7.7.4	Frequency-Band Interworking	353
7.8	Massive MIMO Performance in Macro Network Deployments	355
7.8.1	Overview	355
7.8.2	Dense Urban High Rise	357
7.8.3	Dense Urban Low Rise	360
7.8.4	Suburban/Rural Macro	362
7.9	Summary	364
	References	365
CHAPTER 8	3GPP Physical Layer Solutions for NR	367
8.1	NR Background, Requirements, and Frequency Bands	367
8.2	NR Standard of Physical Layer for Massive MIMO	369
8.2.1	Physical Channels and Signals, Frames and Slots	369
8.2.2	Features Needed to Support mm-Wave Frequencies	371
8.2.3	Antenna Ports, Reference Signals and Quasi-Co-Location	372
8.2.4	Initial Access	379
8.2.5	Reference Signals in NR Rel.15	382
8.2.6	PDSCH and PDCCH Transmission Procedures	408
8.2.7	PUSCH Transmission Procedures	415
8.2.8	Channel State Information Framework	419
8.2.9	Beam-Based Operation	433

8.3	Standard Evolution for Massive MIMO	439
8.3.1	Rel.16	440
8.3.2	Rel.17	445
8.3.3	Rel.18	452
8.3.4	Rel.19	455
8.3.5	Other 3GPP Features Related to Massive MIMO.....	456
8.4	6G Outlook in 3GPP	462
8.5	UE Capabilities and Feature Support for Massive MIMO	463
8.6	NR Summary and Evolution.....	467
	References.....	467
CHAPTER 9	Radio Performance Requirements and Regulation.....	469
9.1	Introduction	469
9.2	Purpose of Radio Requirements	469
9.3	Radio Requirement Description.....	471
9.3.1	General Overview	471
9.3.2	In-Band Transmitter Requirements	475
9.3.3	In-Band Receiver Requirements.....	478
9.3.4	Out-of-Band Requirements	480
9.3.5	Co-location	481
9.3.6	Receiver Demodulation Performance.....	483
9.4	Advanced Antenna System Requirement Approach	484
9.4.1	Requirement Approaches Before Advanced Antenna System.....	484
9.4.2	Challenges Introduced by Advanced Antenna System	485
9.5	Over-the-Air Requirement Concept and Metrics	488
9.5.1	Initial Over-the-Air Requirements for Advanced Antenna System.....	489
9.5.2	Other Over-the-Air Transmitter Requirements	490
9.5.3	Over-the-Air Receiver Requirements	495
9.5.4	Beam Quality Aspects	499
9.6	Derivation of Requirement Thresholds and Levels.....	501
9.6.1	Mapping of FR1 OTA to Conducted Requirements	501
9.6.2	Advanced Antenna System for Millimeter-Wave Frequencies	504
9.6.3	Sub-THz Frequency Ranges	516
9.6.4	OTA Mitigation of Radio Impairments for MIMO Systems.....	516
9.7	Radio Frequency EMF Exposure From AAS Base Stations.....	517
9.7.1	Limits on Human Exposure to Radio Frequency Electromagnetic Fields	517
9.7.2	Assessing Compliance of AAS Base Stations With RF EMF Exposure Limits	518
9.8	Over-the-Air Testing	518
9.8.1	Types of Over-the-Air Test Facilities	518

9.9	5G Advanced Moving Toward 6G	523
9.9.1	5G Advanced Overview.....	523
9.9.2	Overview of Some 6G Candidates From RAN4 Perspective	528
9.10	Summary.....	532
	References.....	533

PART III Network solutions for massive MIMO

CHAPTER 10	Network Use Cases and Solutions	537
10.1	Network Requirements and Solutions	537
10.2	Network Requirements and the Drivers for Continuously Increasing Requirements	537
10.2.1	New Services.....	538
10.2.2	Increasing Traffic.....	539
10.2.3	Higher Requirements on User Experience	539
10.2.4	Requirement Variations in the Network.....	540
10.3	Solutions to Meet the Network Requirements	542
10.3.1	Spectrum and Massive MIMO.....	543
10.3.2	Site Densification and Massive MIMO.....	544
10.3.3	Spectral Efficiency and Massive MIMO.....	545
10.4	Constraints.....	549
10.4.1	Cost.....	549
10.4.2	Ease of Deployment.....	552
10.4.3	Energy Performance.....	554
10.4.4	Device Capabilities	555
10.4.5	Regulatory Constraints.....	556
10.5	Solutions for Different Spectra	556
10.5.1	Spectrum Characteristics Affecting the Massive MIMO Solution.....	556
10.5.2	Time Division Duplex Mid-Band Frequencies	557
10.5.3	Frequency Division Duplex Frequencies	558
10.5.4	Millimeter Wave (mm-wave) Frequencies.....	560
10.5.5	Centimeter Wave (cm-wave) Frequencies	563
10.6	Summary.....	563
	References.....	564
CHAPTER 11	Massive MIMO Hardware Solutions	565
11.1	Introduction	565
11.2	2G, 3G, and 4G Radio Access Network Overview.....	565
11.2.1	RAN/RBS Architecture Development.....	565

11.2.2	Learnings.....	570
11.3	Massive MIMO Solutions for 5G and Beyond	571
11.3.1	Technology Aspects Driving Massive MIMO Solutions.....	571
11.3.2	Architecture and Functional Split Aspects.....	572
11.3.3	Digital Versus Analog Beamforming.....	575
11.3.4	Hardware Implementation of Beamforming	576
11.3.5	Analog Beamforming at mm-Wave	579
11.3.6	Hybrid Beamforming for Large Antennas	581
11.4	Requirements and Solutions.....	582
11.4.1	Requirements on Architecture and Solutions.....	582
11.4.2	Solution Segmentation	582
11.5	Site Solutions.....	584
11.5.1	Radio Site Impacts and Constraints.....	584
11.5.2	Multi-Band Antennas	584
11.5.3	Combining Passive Antennas and Massive MIMO	586
11.6	Radio Base Station Implementation Aspects	589
11.6.1	Split Options	589
11.6.2	Higher Layer Split	590
11.6.3	Lower Layer Split.....	591
11.6.4	eCPRI Ethernet Transport.....	595
11.6.5	Antenna Element and Subarray Implementation	595
11.6.6	Alignment Requirements and Calibration	597
11.6.7	Antenna Mutual Coupling	600
11.7	Summary.....	602
	References.....	603

CHAPTER 12 Massive MIMO Software Feature Solutions..... 605

12.1	What is a Massive MIMO Feature	605
12.2	Categories of Massive MIMO Features.....	608
12.2.1	Where Is a Solution Most Useful?	608
12.3	Coverage.....	609
12.3.1	Coverage Classification	609
12.3.2	Coverage Analysis	611
12.3.3	Coverage Solutions	612
12.3.4	Beamforming as a Coverage Solution.....	612
12.4	Capacity and User Performance	614
12.4.1	Different Codebook-Based Beamforming Implementations.....	616
12.4.2	Advanced MIMO Features and Feature Interaction.....	617
12.5	Ease of Deployment, Cost Efficiency, and Energy Efficiency.....	619
12.6	FDD Specific Features	620

12.7	mm-Wave Specific Features	621
12.8	End-to-End Use Case: Suburban Deployment with Low Traffic Demand	623
12.8.1	Introduction	623
12.8.2	Selecting Massive MIMO Features from the 3GPP Toolbox.....	624
12.8.3	Implementation Aspects.....	626
12.8.4	End-to-End Feature Description	627
12.9	End-to-End Use Case: Dense Urban Deployment with Extreme Traffic Load at Peak Hours	628
12.9.1	Introduction	628
12.9.2	Selecting Massive MIMO Features from the 3GPP Toolbox.....	629
12.9.3	Implementation Aspects.....	630
12.9.4	End-to-end Feature Description.....	631
12.10	Summary.....	632
	Reference	633
CHAPTER 13	How to Use Massive MIMO to Meet Network Requirements	635
13.1	Introduction	635
13.2	Guiding Principles for How to Choose a Radio Access Network (RAN) Solution.....	636
13.2.1	Process.....	636
13.2.2	Objectives and Strategy	637
13.2.3	Network Assets	638
13.2.4	Analysis (Incorporating Deployment Considerations)	639
13.2.5	Solution	641
13.3	Examples of the Strategic Network Evolution Plan.....	641
13.3.1	US Operator Evolution	642
13.3.2	European Network Evolution for MBB	649
13.4	Examples of Site Evolution Plans	653
13.4.1	Mid-Band TDD Sites for Deployment Consideration	654
13.4.2	Mid-Band FDD – Enhance Capacity on Existing FDD Bands	660
13.4.3	mm-wave – Requirements for Extremely High Capacity.....	661
13.5	Summary.....	663
	References.....	664
CHAPTER 14	Developing Services and Technologies	665
14.1	Applications Beyond Mobile Broadband	665
14.1.1	Introduction	665
14.2	Fixed Wireless Access	665
14.3	Developing and Future Services	670

14.3.1	Non-Terrestrial Networks	670
14.3.2	Time Critical Communication	675
14.4	Summary.....	680
	References.....	681
CHAPTER 15	Summary and Outlook	683
15.1	Summary.....	683
15.1.1	Using Massive MIMO to Meet Network Requirements.....	683
15.1.2	Massive MIMO Performance	685
15.1.3	Notes on Selected Issues.....	686
15.2	Expectations on Use of Massive MIMO in 5G Advanced and 6G	688
15.3	Final Remark	689
Appendix A: Mathematical Notation and Concepts.....		691
Index		697
