|---------------------------------------------------------------------------------------------------------------------------------|-----|
| 1. Preface – Günter SCHULTSCHIK .....                                                                                           | 9   |
| 2. Introduction .....                                                                                                           | 13  |
| 3. The bizarre research history of banded newts, especially today's<br><i>Ommatotriton vittatus</i> – Josef F. SCHMIDTLER ..... | 17  |
| 4. Taxonomy, systematics and distribution of banded newts – Ben WIELSTRA .....                                                  | 50  |
| 5. General biology .....                                                                                                        | 57  |
| 5.1. Diagnosis .....                                                                                                            | 57  |
| 5.1.1. Adults .....                                                                                                             | 57  |
| 5.1.1.1. Seasonal variation .....                                                                                               | 59  |
| 5.1.2. Eggs .....                                                                                                               | 61  |
| 5.1.3. Larvae .....                                                                                                             | 61  |
| 5.2. Sexual dimorphism .....                                                                                                    | 63  |
| 5.3. Anomalies .....                                                                                                            | 65  |
| 5.4. Methods for species identification .....                                                                                   | 68  |
| 6. Banded newts in their habitats .....                                                                                         | 75  |
| 6.1. Phenology .....                                                                                                            | 75  |
| 6.2. Activity .....                                                                                                             | 76  |
| 6.3. Habitats .....                                                                                                             | 76  |
| 6.3.1. Aquatic habitats .....                                                                                                   | 76  |
| 6.3.2. Terrestrial habitats .....                                                                                               | 84  |
| 6.4. Migrations .....                                                                                                           | 91  |
| 6.5. Observation and detection methods .....                                                                                    | 92  |
| 6.6. Diet .....                                                                                                                 | 97  |
| 6.7. Defensive behaviour .....                                                                                                  | 98  |
| 6.8. Reproduction .....                                                                                                         | 99  |
| 6.8.1. Courtship .....                                                                                                          | 99  |
| 6.8.2. Fighting behaviour .....                                                                                                 | 109 |
| 6.8.3. Oviposition .....                                                                                                        | 113 |
| 6.9. Development .....                                                                                                          | 116 |
| 6.9.1. Embryonic development .....                                                                                              | 116 |
| 6.9.2. Larval development .....                                                                                                 | 119 |
| 6.9.3. Metamorphosis .....                                                                                                      | 120 |
| 6.9.4. Paedomorphosis .....                                                                                                     | 123 |
| 6.9.5. Life after metamorphosis .....                                                                                           | 125 |
| 6.9.6. Age determination .....                                                                                                  | 127 |
| 7. Husbandry .....                                                                                                              | 128 |
| 7.1. Location .....                                                                                                             | 129 |

|                                               |     |
|-----------------------------------------------|-----|
| 7.2. Enclosure size .....                     | 130 |
| 7.3. Stocking .....                           | 130 |
| 7.4. Temperature regimes .....                | 131 |
| 7.5. Lighting and lighting duration .....     | 131 |
| 7.6. Escape protection and cover .....        | 132 |
| 7.7. Rediscovery of escaped animals .....     | 133 |
| 7.8. Handling .....                           | 137 |
| 7.9. Aquatic phase .....                      | 137 |
| 7.9.1. Substrate .....                        | 137 |
| 7.9.2. Decoration .....                       | 138 |
| 7.9.3. Planting .....                         | 139 |
| 7.9.4. Haul-out areas .....                   | 141 |
| 7.9.5. Water quality and water changes .....  | 141 |
| 7.10. Terrestrial phase .....                 | 143 |
| 7.10.1. Humidity and substrate moisture ..... | 143 |
| 7.10.2. Damp refuge .....                     | 143 |
| 7.10.3. Ventilation .....                     | 143 |
| 7.10.4. Substrate .....                       | 145 |
| 7.10.4.1. <i>Clay</i> .....                   | 146 |
| 7.10.4.2. <i>Bentonite</i> .....              | 147 |
| 7.10.4.3. <i>Leaf mould</i> .....             | 148 |
| 7.10.4.4. <i>Gravel</i> .....                 | 148 |
| 7.10.4.5. <i>Paper towels</i> .....           | 149 |
| 7.10.4.6. <i>Acidity gradient</i> .....       | 150 |
| 7.10.5. Decoration .....                      | 150 |
| 7.10.6. Plating .....                         | 151 |
| 7.10.7. Hygiene .....                         | 151 |
| 7.10.8. Hibernation .....                     | 152 |
| 7.10.9. Aestivation .....                     | 153 |
| 7.11. Outdoor enclosures .....                | 155 |
| 7.12. Feeding .....                           | 159 |
| 7.12.1. Feeding intervals .....               | 159 |
| 7.12.2. Feeding records .....                 | 160 |
| 7.12.3. Feeder animals .....                  | 160 |
| 7.12.4. Dry foods .....                       | 173 |
| 7.12.5. Gut loading and supplementation ..... | 175 |
| 7.12.6. Food envy and cannibalism .....       | 176 |
| 7.13. Acquisition .....                       | 179 |
| 7.13.1. Sources .....                         | 179 |
| 7.13.2. Reporting requirements .....          | 180 |
| 7.13.3. Quarantine .....                      | 184 |

|                                                                                                             |     |
|-------------------------------------------------------------------------------------------------------------|-----|
| <b>8. Breeding</b> .....                                                                                    | 185 |
| 8.1. Preparations .....                                                                                     | 185 |
| 8.2. Development of the breeding dress .....                                                                | 186 |
| 8.3. Courtship .....                                                                                        | 189 |
| 8.4. Intermale aggression .....                                                                             | 191 |
| 8.5. Oviposition .....                                                                                      | 191 |
| 8.6. Transition between water and land after reproduction .....                                             | 194 |
| <b>9. Rearing the offspring</b> .....                                                                       | 200 |
| 9.1. Embryonic development and hatching .....                                                               | 200 |
| 9.2. Larval phase .....                                                                                     | 202 |
| 9.2.1. Rearing in groups .....                                                                              | 202 |
| 9.2.2. Rearing individually .....                                                                           | 203 |
| 9.2.3. Equipment in the larval tank .....                                                                   | 203 |
| 9.2.4. Development .....                                                                                    | 204 |
| 9.2.5. Feeding the larvae .....                                                                             | 206 |
| 9.2.6. Metamorphosis .....                                                                                  | 207 |
| 9.3. Raising juveniles .....                                                                                | 211 |
| 9.3.1. Husbandry .....                                                                                      | 211 |
| 9.3.2. Dormancy periods for juveniles .....                                                                 | 215 |
| 9.3.3. Sexual differentiation in juveniles .....                                                            | 215 |
| 9.3.4. Reaching sexual maturity .....                                                                       | 215 |
| <b>10. Health issues with <i>Ommatotriton</i> and hygiene measures –</b><br>Frank PASMANS & An MARTEL ..... | 218 |
| 10.1. Metabolic bone disease .....                                                                          | 219 |
| 10.2. Hypovitaminosis .....                                                                                 | 220 |
