

# Contents

<i>About the Editors</i>	v
<i>About the Contributors</i>	vii
<i>Acknowledgments</i>	xiii
<i>Introduction – Energy Reimagined: Precise Discussions on Batteries are Shaping the Future Julian Joël Grimm and Kai Peter Birke</i>	xv
Chapter 1     The Periodic System of Elements as the Limiting Factor for Galvanic Cell Design <i>Elisa Thauer and Kai Peter Birke</i>	1
Chapter 2     Energy Density vs. Power Density: Implications for Electrolyte Quantity and Filling Procedure <i>Johannes Wanner and Kai Peter Birke</i>	21
Chapter 3     The Best Battery Cell Candidates for Highest Energy Density <i>Kathrin Schad and Kai Peter Birke</i>	41
Chapter 4     Energy Density versus Power Density, Lifespan, Safety, and Costs <i>Sabri Baazouzi and Kai Peter Birke</i>	93
Chapter 5     The Role of Raw Materials in Enhancing or Limiting Energy Density <i>Daniel Steffen Reichert and Kai Peter Birke</i>	139

Chapter 6	Remaining Energy Densities at the Battery Systems Level	187
	<i>Julian Joël Grimm and Kai Peter Birke</i>	
Chapter 7	Achievable Progress in Battery Energy Densities	201
	<i>Yucheng Luo and Kai Peter Birke</i>	
Chapter 8	Power-to-X Technology for Decarbonizing Non-Land Transportation, Heating, and Chemical Industry	221
	<i>Paul Rößner and Kai Peter Birke</i>	
	<i>Index</i>	255
