Foreword *xiii*

About the Author *xix*

Preface *xxi*

Acknowledgments *xxv*

1	Signals, Receivers, and Antennas	1
1.1	Random Variables, Real and Complex	1
1.1.1	Definitions	2
1.1.2	Operations	4
1.1.3	Normal Random Variables	6
1.1.4	The Arc Sine Law	8
1.2	Stochastic Processes	9
1.2.1	Stationarity	10
1.2.2	Correlation and Power	11
1.2.3	Jointly Normal Processes	14
1.2.4	Spectral Densities	17
1.2.5	Linear Systems	19
1.2.6	Time Averaging or Integration	20
1.3	Analytic Signals	23
1.3.1	Hilbert Transform and Quadrature Filter	23
1.3.2	Complex Envelope	25
1.3.3	Correlation and Spectra	26
1.4	Phasors of Random Signals	28
1.4.1	Concept	29
1.4.2	Power and Cross-correlation	30
1.4.3	Linear Systems	31
1.5	Microwave Networks	32
1.5.1	Voltage and Current	32
1.5.2	Normalized Voltage Waves	34
1.5.3	Available Power	35

1.5.4	S-parameters and Power Gains	36
1.5.5	Noise Waves and Temperature	38
1.5.6	Interconnection	40
1.5.7	Two-port Networks	42
1.5.8	Cascade	45
1.5.9	High Gain Receiver	46
1.5.10	The Bosma Theorem	48
1.6	Antennas	50
1.6.1	Radiated Electric Field and Power Density	50
1.6.2	Antenna Pattern and Directivity	51
1.6.3	Antenna Polarization	53
1.6.4	Thermal Noise Radiation	56
1.6.5	Received Signal	57
1.6.6	Phase Center	59
1.6.7	Polarization Misalignment	60
1.6.8	Transmission Link	61
1.6.9	Reciprocity	62
1.6.10	Other Definitions	64
1.6.11	Antenna Loss	65
	References	66
2	Microwave Radiometry	69
2.1	Thermal Emission	69
2.1.1	Emissivity and Brightness Temperature	70
2.1.2	Planck and Rayleigh–Jeans Laws	73
2.2	Polarization	74
2.2.1	Stokes Parameters and Polarimetric Brightness Temperature	74
2.2.2	Change of Polarization Frame	76
2.2.3	Linear Axis Rotation	77
2.2.4	Horizontal and Vertical Polarization	78
2.2.5	Circular Polarization	80
2.3	Antenna Temperature	81
2.3.1	Concept	81
2.3.2	Flat Target	83
2.3.3	Point Source	84
2.3.4	Extended Source	85
2.3.5	Angular Resolution	85
2.4	Total Power Radiometers	86
2.4.1	Received Signal	87
2.4.2	Power Measurement and Sensitivity	90
2.4.3	Square Law Device	94

2.4.4	Quadratic Detector	97
	References	100
3	Interferometry and Polarimetry	101
3.1	Historical Perspective	101
3.1.1	The Proposed Formulation	105
3.2	A Single Baseline	106
3.2.1	Visibility	106
3.2.2	Single Polarization	109
3.2.3	Polarimetric Radiometry: Ideal Case	110
3.2.4	Full Polarimetric Case	111
3.2.5	Receivers Interaction	114
3.2.6	The “ $-T_r$ ” Term	119
3.3	The Visibility Equation	120
3.3.1	Complex Correlation	121
3.3.2	The Fringe Washing Function	123
3.3.3	Director Cosines	125
3.3.4	Fourier Relation	127
3.4	Correlation Measurement	127
3.4.1	Sensitivity	128
3.4.2	Four Signal Multipliers	131
3.4.3	Two Signal Multipliers	133
3.4.4	Analog Multipliers	137
3.4.5	Signal Clipping and Normalized Correlation	139
	References	146
4	Aperture Synthesis	149
4.1	Synthetic Beam	150
4.1.1	Hexagonal Sampling	153
4.2	Radiometric Sensitivity	155
4.2.1	Variance of the Modified Brightness Temperature	155
4.2.2	Uncorrelated Visibility Samples	157
4.2.3	Correlation of Visibility Samples	159
4.3	Spatial Sampling	163
4.3.1	Visibility Coverage	163
4.3.2	Reciprocal Grids	164
4.3.3	Aliasing	166
4.3.4	Field of View	168
4.3.5	Hexagonal Grids: Y-shape Instrument	168
4.3.6	Hexagonal Instrument	171
4.4	Imaging	175

4.4.1	System of Equations	175
4.4.2	Conjugate Extension and Redundant Baselines Averaging	178
4.4.3	Fourier Image Reconstruction	179
4.4.4	G-matrix Image Reconstruction	181
4.4.5	Polarimetric Retrieval: Ideal Case	184
4.4.6	Full Polarimetric Case	184
4.4.7	Spatial Frequency Components	186
4.4.8	Reconstruction Error and Alias Mitigation	189
	References	191
5	Instrument Techniques	193
5.1	Frequency Conversion	193
5.1.1	Frequency Bands	193
5.1.2	Mixer Operation	195
5.1.3	Image Rejection Mixer	196
5.2	In-phase and Quadrature (IQ) Mixer	197
5.2.1	Concept	197
5.2.2	General Analysis	198
5.2.3	Quadrature Error	200
5.2.4	Correction of Phase Errors	201
5.2.5	Normalized Correlations	202
5.3	Quarter Period Delay	203
5.3.1	Concept	203
5.3.2	Center Frequency Error	205
5.3.3	Normalized Correlations	206
5.4	Digital Techniques	207
5.4.1	Sampling	207
5.4.2	Impact on Measurement Uncertainty	215
5.4.3	Low-frequency Spectrum	217
5.4.4	Spectrum with High-frequency Content	221
5.4.5	I/Q Alternate Sampling	225
5.4.6	Nyquist Zones	227
5.4.7	Correlation in the Frequency Domain	231
	References	235
6	Calibration and Characterization	237
6.1	Calibration Standards	237
6.1.1	Antenna and Calibration Planes	238
6.1.2	Plane Change in Total Power Radiometers	240
6.1.3	External Passive Targets	243
6.1.4	Probe Antenna	245

6.1.5	Internal Load	247
6.1.6	Noise Distribution	248
6.2	Parameter Retrieval	250
6.2.1	Correlator Gain	251
6.2.2	Inter-element Phase and Amplitude	253
6.2.3	Correlator Offset	255
6.2.4	Flat Target Response	257
6.2.5	Fringe Washing Function Shape	259
6.2.6	Receiver Gain and Offset	261
6.2.7	Instrumental Offset	263
6.3	Nonlinearity	265
6.3.1	Deflection Ratio	266
6.3.2	Impact on Instrumental Offset	267
6.4	Calibration Rate	268
6.4.1	Averaging and Interpolation	268
6.4.2	Temperature Correction	269
	References	270

A	Definitions and Concepts	273
A.1	Complex Vectors	273
A.2	Useful Complex Number Identities	274
A.3	Energy Conservation and Unitary Matrix	274
A.4	Spherical Coordinates and Solid Angle	275
A.4.1	Differential Surface	275
A.4.2	Solid Angle	275
A.5	Quadrature Equation Inversion	276
A.6	Special Functions	277
A.7	Fourier Transform	278
A.7.1	Convolution	278
A.7.2	Properties	279
A.7.3	Transform Pairs	279
A.7.4	Real Signals	279
A.7.5	Two-dimensional Fourier Transform	280
A.8	Discrete Fourier Transform	281
A.8.1	Correlation in Time and in Frequency	283
A.8.2	Random Signals	283
A.8.3	Two-dimensional Case	284
	Reference	284
