

Contents

1 Overview	1
1.1 High-Power Microwaves	1
1.1.1 Definition of High-Power Microwaves	1
1.1.2 Characteristics of High-Power Microwaves and Their Measurement	2
1.2 Introduction to the Power Measurements of High-Power Microwave	3
1.2.1 Microwave Power Measurement	3
1.2.2 Definition of Microwave Power	5
1.2.3 Fundamental Composition of Microwave Power Measurement System	8
1.2.4 Classification of Microwave Power Meters	11
1.2.5 Characteristics of Power Meters	15
1.3 Introduction to the Mode Measurement of High-Power Microwave	16
1.3.1 Necessity of Mode Measurement of High-Power Microwave	16
1.3.2 Primary Methods of Mode Measurement for High-Power Microwave	18
1.4 Introduction to the Frequency Measurement of High-Power Microwave	20
1.4.1 Fundamental Concept of Frequency Measurement	20
1.4.2 High-Power Microwave Frequency Measurement	22
2 Power Measurements of High-Power Microwave of Continuous Wave and Continuous Pulse Wave	25
2.1 Introduction	25
2.2 Thermal-Effect Power Meter—Calorimetric Power Meter	27
2.2.1 Dry Calorimeter Power Meter	28
2.2.2 Liquid Calorimeter Power Meter	35

2.3	Thermal-Effect Small-Power Meter	39
2.3.1	Thermoelectric Resistance Power Meter	40
2.3.2	Thermocouple Power Meter	44
2.3.3	Ferrite Power Meter	48
2.4	Non-thermal Effect Power Meter	52
2.4.1	Detector Small-Power Meter	52
2.4.2	Hall-Effect Power Meter	58
2.4.3	Electromagnetic Wave Pressure Effect Power Meter	62
2.4.4	Other Electromagnetic-Effect Power Meters	71
2.5	Power Measurement of Continuous Pulse Microwave	76
2.5.1	Average Power Method	77
2.5.2	Peak Detection Method	79
2.5.3	Comparative Measurement Method	81
2.5.4	Notch Method	84
3	Radiation Field Measurement of High-Power Microwaves	
	Power	89
3.1	Introduction	89
3.2	Radiation Field Measurement of Microwave Power	90
3.2.1	Overview	90
3.2.2	Microwave Radiation Field	91
3.3	Total Attenuation Measurement Method	94
3.3.1	Overview	94
3.3.2	Calibration of the Measurement System	97
3.4	Space Integral Measurement Method	100
3.4.1	Single-Point Measurement Method	100
3.4.2	Multi-point Measurement Method	102
3.4.3	Radiation Directivity or Antenna Gain Measurement Method	107
3.5	Numerical Integration Method and Fitting Method	109
3.5.1	Numerical Integration Method	109
3.5.2	Fitting Method for Radiation Pattern	112
3.6	Calibration of Effective Horn Aperture and Characteristics of Spatial Integral Measurement Method	115
3.6.1	Calibration of Effective Receiving Horn Aperture	115
3.6.2	Merits and Faults of the Spatial Integration Measurement	121
4	Coupling Field Measurement of High-Power Microwave Power	125
4.1	Introduction	125
4.2	Probe Coupling Method	126
4.2.1	Overview	126
4.2.2	Coupling Power of Probe	128
4.2.3	Fields and Power in Waveguides	130

4.3	Coupling Coefficient and Effective Section of Probe	135
4.3.1	Definition of Coupling Coefficient and Coupling Rules	135
4.3.2	Coupling Coefficient of Probe	139
4.3.3	Calibration of Effective Section of Probe	144
4.4	Small-Hole Coupling Method	150
4.4.1	Technical Specifications of Directional Coupler	150
4.4.2	Fundamental Theory of Small-Hole Coupling	152
4.4.3	Practical Directional Coupler	160
4.5	Calibration of Directional Coupler	168
4.5.1	Mode Exciters	169
4.5.2	Mode Converters	173
4.5.3	Calibration of the Coupler by Network Analyzers	179
5	Other Electromagnetic-Effect Use in High-Power Microwave Power Measurement	183
5.1	Vacuum Diode Power Meter and Capillary Energy Meter	184
5.1.1	Measurement Method Using Vacuum Detector Diode	184
5.1.2	Measurement Method Using Thermionic Diode	185
5.1.3	Measurement Method Using Capillary Energy Meter	188
5.2	Power Measurement Using Resistive Sensor	195
5.2.1	Resistive Sensor	195
5.2.2	Power Probe of Resistive Sensor	198
5.2.3	Power Measurement Method Using Resistive Sensor	203
5.2.4	Application of Resistive Sensor in China	206
5.3	Electroacoustic Method for the Power Measurement	209
5.3.1	Fundamental Principles of Electroacoustic Method	209
5.3.2	Electroacoustic Method for Pulse Power Measurement of High-Power Microwave	214
6	Mode Field Measurement of High-Power Microwave Mode	217
6.1	Introduction	217
6.2	Image Display Method	219
6.2.1	Scorched Spot Method	219
6.2.2	Thermosensitive Paper (Film) Method	220
6.2.3	Neon Tube Array Method	225
6.3	Radiation Field Measurement Method	227
6.3.1	Overview	227
6.3.2	Direct Discrimination Method	229
6.3.3	Numerical Calculation Method	235
6.3.4	Single-Mode Discrimination Method	239
6.4	Analysis Methods of Thermal Image	244
6.4.1	Analytical Method of Infrared Image	245
6.4.2	Analytical Method of Thermoelectric Detection	250

6.5	Measurement Method of the Field in Waveguides	253
6.5.1	Fundamental Principles	253
6.5.2	Practical Measurement Example	254
7	Mode Spectrum Measurement of High-Power Microwave Mode	259
7.1	Introduction	259
7.1.1	Differences Between Mode Spectrum and Mode Field Measurement Methods	259
7.1.2	Mode Spectrum Measurement Method	261
7.2	Measurement Method Using Dispersive Reflector Antenna	263
7.2.1	Measurement Principles of Dispersive Reflector Antenna	263
7.2.2	Experimental Results	265
7.3	Mode Selective Coupling Method	267
7.3.1	Cross-Coupling Method	267
7.3.2	Theoretical Foundation of Mode Selective Coupler with Overmoded Waveguide	269
7.3.3	Design of Mode Selective Coupler	280
7.3.4	Design Examples of Mode Selection Coupler	290
7.4	Calibration and Power Measurement of Mode Selective Coupler	294
7.4.1	Direct Calibration Method	294
7.4.2	Back-to-Back Calibration Method	298
7.4.3	Coupling Coefficient Calibration, Mode Discrimination, and Power Measurement	305
7.5	Wavenumber Spectrum Measurement Method-Small-Hole Array Antenna Method	308
7.5.1	Fundamental Principles and Measurement Instruments of Wavenumber Spectrum Method	309
7.5.2	Main Factors to Be Considered in Wavenumber Spectrum Method	312
7.5.3	Measurement Examples of Wavenumber Spectrum Method	316
8	Frequency Measurement of High-Power Microwave	321
8.1	Waveguide Dispersion Method	321
8.1.1	Conventional Waveguide Dispersion Method	321
8.1.2	Circulating Waveguide Dispersion Method	325
8.2	Frequency Mixing Method (Heterodyne Method)	330
8.2.1	Measurement Principles of Frequency Mixing Method	330
8.2.2	Experimentation of Frequency Mixing Method	334
8.3	Filtering Method	336
8.3.1	Filter Measurement Method	336
8.3.2	Cutoff Waveguide Measurement Method	342

8.4	Other Methods of Frequency Measurement	346
8.4.1	Direct Reading Measurement Using Oscilloscope	346
8.4.2	Measurement Method with Evanescent Mode Attenuator	347
