PREFACE TO THE FIRST EDITION.	vii

SECTION 1

INTRODUCTION TO GEAR CUTTING

CHAPTER I. GEARS AND GEAR CUTTING PRACTICE	1
Steel Gears—Other Materials—Tooth Curves and Pressure Angles—Shapes of Gear Teeth—Teeth and Parts of Gears—Profiles of Gear Teeth—Terms Commonly Used—Pitch Diameter—Measuring Tooth Depth—Types of Gears—How Gear Teeth Are Laid Out—Gear Cutting Methods—How Gears Are Measured—Proportions of Gear Teeth—Proportion of Metric Gear Teeth—Module System Translation Formulas—Tables of Tooth Parts—Standard Backlash Practice—Measuring Backlash—Gear Blanks—Cast-iron Gear Blanks—Cutting Oils for Machinery and Soft Steel—Cutting Oils for Alloy and High-carbon Steels—Cooling Compounds for Brass, Bronze, and Aluminum—Cutting Fibrous Materials—Automobile and Other Gears—Steels Used—Physical Properties—Gear Materials and Blanks—Forged and Rolled Carbon Steel—Forged and Rolled Alloy Steel—Steel Castings—Bronze and Brass Castings—Non-metallic Gears and Pinions—Standard Keyways for Gears—Standard Limits and Tolerances on Holes in Gears—Depth of Keyways—Recommended Practice for Holes.	

SECTION 2

CUTTING SPUR GEARS WITH CIRCULAR CUTTERS

CHAPTER II. SPUR GEARS AND CIRCULAR CUTTERS.	59
Cutting Spur Gears—Formed Cutters—Cutting Gears in the Milling Machine—The Principles of Hobbing—Hobbing vs. Milling of Gear Teeth—Cutting Gears by the Hobbing Process—Setting Up Hobbing Machines—Estimating Production—Approach and Overrun—Selecting Proper Feeds and Speeds—Division of Operating Time—Estimating Approach of Cutter—Gould and Eberhardt Gear Hobber—Gearing Hobber for Cutting Gears—Estimating Production—The Lees-Bradner Hobbing Machine—Semi-automatic Gear Hobbers—Standardized Hobbing—Differential and Nondifferential Methods of Gear Hobbing—Advantages of the Differential Method (Parallel Helical Gear)—Limitation of	

the Differential Method (Parallel Helical Gears)—Advantages of the Nondifferential Method (Parallel Helical Gears)—Using the *C* Constant.

SECTION 3

SHAPING EXTERNAL AND INTERNAL GEARS

CHAPTER III. THE SHAPING METHOD OF CUTTING GEARS. 121

Fellows Gear Shaper—Some Details of the Fellows Machine—Holding Gears for Cutting—Examples of Gear-shaper Work—Side-truing Cutters—Forms Generated by Reciprocating Tools—Sykes Gear Generator—Mating of Hobbed and Shaped Gears—Getting the Most Out of Shaper Gear Cutters—The Shear-speed Gear Cutting Machine.

CHAPTER IV. CUTTING SMALL PINIONS 142

Gear Shaper for Small Pinions—Fine-tooth Gears.

CHAPTER V. INTERNAL GEARS 153

Clearance Grooves for Internal Gears—Calculating Elements of Internal Gears—Interference in Internal Gears—Rules for Calculating Tooth Parts—Internal Clutch Gears—Limits for Size of Internal Clutch Gears—Cutting Internal Clutch Gears—Smallest Number of Teeth That Can Be Cut with the Gear-shaper Cutter.

SECTION 4

TYPES OF BEVEL GEARS

CHAPTER VI. TYPES OF BEVEL GEARING 171

Plain Bevel Gears—Cutting Bevel Gears in the Milling Machine—Pitch of Bevel Gear—Data Required to Cut Bevel Gears with Rotary Cutter—Scratch Depth Line on Blank—Selection of Cutter for Bevel Gears—Rule for Selecting Cutter—Setting Cutter out of Center—Cutters for Right-angle Gears and Pinions—Roughing Out Bevel Gears—Gleason Machines—Gleason Bevel-gear Generator—Bevel-gear Developments—The Formate Gear Tooth—Formate Bevel Gears—Precision Bevel Gears with a Rotary Cutter—Coniflex Gears—Cutting Spiral Bevel Gears—Spiral Bevel-gear Generator—Finishing Spiral-bevel and Hypoid Gears—Three Methods of Finish Cutting—Bearing of Bevel-gear Teeth—Adjustment of Bevel Gears in Assembly—A.G.M.A. Suggestions—Grinding Hypoid Gear Teeth—Chucks and Mandrels for Bevel Gears—Bevel-gear Tolerances—A.G.M.A. Standard System Fine-pitch Straight Bevel Gears.

SECTION 5

HELICAL GEARS, AND HOBS AND CUTTERS

CHAPTER VII. HELICAL AND HERRINGBONE GEARS. 229

Helical Gears—Real Pitches of Circular Pitch Helical Gears—

Spur-gear Cutters for Helical Gears—Helical-gear Table—Helical-gear Calculations—Accuracy of Helical Gears—Helical-gear Angles—Herringbone Gears—Hobbing Helical Gears Using Differential—Lead Gears—Hobbing Helical Gears without Using Differential—Index Gears—Feed Gears—Gearing Calculations.

CHAPTER VIII. HOBBS AND CUTTERS. 259

Terms Used by Makers—Terms Used in Connection with Hobbs and Hobbing—Hobs for Gear Cutting—Straight- or Taper-hole Hobs—Taking One or Two Cuts—Carbide-tipped Hob Teeth—Positioning of Hobs—Sharpening and Maintenance—Worm-gear Hobs—Sharpening Gear-shaper Cutters—Hob Spindle Standards—Laminated Helical Gears—Illinois Fine-pitch Gear Generator—Hobbing Spline Shafts—Hobbing Taper Splines.

SECTION 6

WORMS AND WORM GEARING

CHAPTER IX. WORM THREADS AND GEARS 295

Early Hourglass Worms—Angle of Worm Threads—Cutting Worm Wheels—Compound Ratios—Worm Threads—Two Methods of Hobbing Worm Wheels—Tangential Hobs—Cutting Small Worm Wheels—Cone Worm Gears—Rules and Formulas for Worm Gears—To Cut Worm Wheels on Hobbing Machine—Multiple-thread Worm Wheels—Standard Design of Worm Gearing—Worm Threads—Worm-wheel Hobs—Lead Gears for Diametral Pitch Worms—Proportions of Circular-pitch Worms—Worm-thread Measurement—Cutting Hourglass Worms on the Gear Shaper—Backlash—Snail-back Fly Tool for Cutting Worm Wheels.

SECTION 7

INVOLUTE AND STRAIGHT-SIDED SPLINES

CHAPTER X. SPLINES FOR GEARS. 329

Involute Splines—Length of Spline—Basic Tooth Proportions—Measurement of Tooth Thickness—Types of Fits—Pin Measurements of Involute Splines—Straight-sided Splines—Taper Shafts.

SECTION 8

FINISHING GEAR TEETH AND BORES

CHAPTER XI. BURNISHING, SHAVING, LAPPING AND GRINDING GEAR TEETH AND BORES. 353

Gear-tooth Burnishing—Gear-tooth Shaving—Rotary Crossed-axis Shaving—Red Ring Diagonal Gear Shaver—Shaving Involute Splines—Fellows "Full-Tool" Shaving Principle—Fellows Gear Shaving Machine—Traverse Feeds and Cutting Time—Fellows Internal Gear Shaver—Lapping Spur and Helical Gears—Princi-

ple of Lapping Operation—Gear-lapping Practice—Modern Gear-lapping Methods—Lapping Spiral-bevel Gears—Lapping Compound—Grinding Helical Gears with Generating Wheel—Stock Control for Grinding Spiral-bevel Gears—Formed Wheels for Gear-tooth Grinding—Red Ring Gear Grinder—Gears for Automobile Transmissions—Grinding the Bores of Gears—Gear-holding Chucks.

SECTION 9

HEAT TREATMENT OF GEARS

CHAPTER XII. WHEN HEAT TREATMENT BEGINS. 391

Continuous Cyaniding—Wearing Qualities of the Case—How Buick Handles Gears Steels—Annealing—Hardening—Cyanide Hardening—Controlled-atmosphere Hardening Furnace—Drawing—Ring-gear Quenching Machine—Heat Treatment for S.A.E. Gear Steels—Flame Hardening of Gear Teeth—The Gleason Methods—Quenching Dies for Gear Hardening.

CHAPTER XIII. STANDARDS OF GEARING PRACTICE. 416

Standard Letter Symbols for Gearing—New Gear Notation—Wear of Gear Teeth.

SECTION 10

GEAR-INSPECTION METHODS AND EQUIPMENT

CHAPTER XIV. GEAR INSPECTION. 421

Involute-profile Measuring Machine—Calculating the Base Circles—To Find the Base Circle of Helical Gears—To Find Transverse Pitch—Normal-pitch- and Space-measuring Machine—Helical Gears—Fellows Involute Measurer—Bevel Gears—Inspecting Helical Gears—Helical-lead Checking Machine—Fellows Lead Measuring Machine—Checking Calibration of Fellows Instrument—"Sine-line" Lead Checker—The Red Ring Gear Checker—Helical-gear-tooth Measurement—The Red Liner Inspection Machine—Inspecting Gears with Theoretically Correct Rack—Hand-operated Gear-testing Fixture—Accuracy in Gear Gaging—Hob Inspection—Inspecting Worms—Worm and Worm-gear Measuring Machine—Red Ring Sound Tester—Wires for Measuring Gear Teeth and Involute Splines—Simplified Gear-measuring System—Module Gears—The New, Involute Splines—Gear-tooth Measuring Blocks—Checking Fine-pitch Spur Gears—Measure with Drill Rod—Tolerances for Bevel and Hypoid Gears—Master Gear Standard—A.G.M.A. Standard for 20-deg. Involute Fine-pitch System for Spur Gears—Lapping Hardened Gears.

INDEX. 523
