

CONTENTS

	PAGE
<i>Preface</i>	vii
<i>Introduction to Volume I</i>	ix
<i>Chapter</i> 1. Essential features of statistical data	1
2. Descriptive statistics. First steps	17
3. Descriptive statistics. Fundamental analytical ideas	41
4. Descriptive statistics. Correlation and linear regression	86
5. The problem of statistical inference	120
6. Probability: fundamentals	135
7. Probability: random variables	158
8. Probability: some important distributions	194
9. Statistical hypotheses	223
10. Simple statistical tests	242
 <i>Appendix</i> 1. Corrections for grouping	 269
2. Stirling's approximation to $n!$	274
3. The Normal curve as an approximation to the binomial probabilities	277
4. Values of the ordinate and the cumulative distribution function for the Normal curve	280
 <i>Answers to the Exercises and notes on the solutions</i>	 282
<i>Index</i>	288
