<i>Introduction to the series</i>	V
<i>Preface</i>	VII
<i>Preface to the second edition</i>	VIII

PART I: STATICS

<i>Chapter I. Utility functions</i>	3
1.1. Basic axioms on the preference relation	4
1.2. Additional axioms	8
1.3. Ordinalism versus cardinalism	11
1.4. Maximization of the utility function	16
1.5. Indirect utility functions	27
<i>Chapter II. Demand functions: general restrictions</i>	32
2.1. Homogeneity of degree zero	34
2.2. Adding-up	38
2.3. The Slutsky equation: an intuitive approach	40
2.4.* The fundamental matrix equation	47
2.5. Concluding remarks: evidence and significance	53
<i>Chapter III. Demand functions: particular restrictions</i>	57
3.1. Additive utility functions	57
3.2. Separable utility functions	66
3.3. Conditional demand functions and the implications of separable utility	72
3.4.* The structure of preferences: substitution, complementarity and independence	77
3.5. Homothetic utility functions	86
<i>Chapter IV. Empirical implementations</i>	91
4.1. Economic theory and empirical analysis	92
4.1.1. Theoretical plausibility	93
4.1.2. Identification	94
4.1.3. Ceteris paribus	96
4.1.4. Aggregation over individuals	98

4.2.	Engel curves	102
4.2.1.	Household budgets and Engel curves	102
4.2.2.	Ceteris paribus	103
4.2.3.	General restrictions	106
4.2.4.	Allen and Bowley	106
4.2.5.	Prais and Houthakker	110
4.2.6.	Addilog utility functions	113
4.3.	Studies using time series	116
4.3.1.	H. Schultz	116
4.3.2.	Stone's 'Measurement of Consumers' Expenditure and Behaviour'	119
4.3.3.	The linear expenditure system	122
4.3.4.	Duality and flexible functional forms	132
4.3.5.	An almost ideal demand system	136

Chapter V. Cost-of-living indices 139

5.1.	Statistical price indices	139
5.2.	The true cost-of-living index	141
5.3.	The true index in the linear expenditure system	142
5.4.	The true index and the Laspeyres index	146
5.5.	International comparisons of purchasing power	149

PART II: DYNAMICS

Chapter VI. Dynamic single-equation models 155

6.1.	Introduction	155
6.2.	Distributed lag models	157
6.2.1.	Empirical distributed lag models	157
6.2.2.	The partial adjustment model	160
6.2.3.	The demand for automobiles	161
6.2.4.	The demand for household durables	164
6.3.	Habit formation and stock adjustment: a generalization to all commodities	168

Chapter VII. Dynamic demand systems 177

7.1.*	Dynamic utility functions	177
7.2.*	Short-run and long-run utility functions	182
7.3.*	The general restrictions again	186
7.4.*	Derivation of a dynamic linear system	189
7.5.*	A dynamic version of the linear expenditure system	191
7.5.1.	'Myopic' maximization	192
7.5.2.	Long-run effects	193
7.5.3.	Short-run effects	194
7.5.4.	A finite approximation	196
7.5.5.	Empirical results	197
7.6.*	A dynamic quadratic model	204

Chapter VIII. Substitution, complementarity and the utility tree 212

8.1.*	Introduction	212
8.2.*	Random shocks	213

Contents

XI

8.3.* The residual variation and the structure of preferences	215
8.4.* Principal components	218
8.5.* Some empirical results	221

Chapter IX. Dynamic cost-of-living indices 224

9.1.* Introduction	224
9.2.* The Fisher-Shell index	226
9.3.* The cardinal index	228
9.4.* A dynamic specification	231
9.5.* A computational algorithm	234
9.6.* Comparing different indices	238
9.7.* Final remarks	240

Chapter X. The demand for leisure and money 242

10.1.* Introduction	242
10.2.* A demand system including leisure and money	244
10.3.* Short-run and long-run effects	248
10.4.* Estimation procedures	251
10.5.* Empirical results	255
10.6.* True indices of real wages	261

Chapter XI. An intertemporal approach 267

11.1.* Ordinal intertemporal utility functions	269
11.2.* Impatience and time perspective	273
11.3.* Utility functionals	275
11.4.* Consistency in intertemporal utility maximization	276
11.5.* The wealth constraint	280
11.6.* Dynamic demand systems and the maximum principle	283
11.7.* Alternative estimation procedures	286
11.8.* Decentralization with unchanging tastes	288
11.9.* Decentralization with changing tastes	293
11.10.* The linear expenditure system with rational habit formation	297
11.11.* Observational equivalence with myopic models	298
11.12.* Consistency and time preference	303
