PART I

PRINCIPLES OF HEAT AND TEMPERATURE MEASUREMENTS

1.	TEMPERATURE SCALES	3
	Evolution of concept of heat and temperature. Development of measuring instruments.	
2.	EXPANSION THERMOMETERS	13
	Thermal expansion coefficients. Differential expansion. Liquid-in-glass thermometers. Gas thermometer. Bimetallic thermometer.	
3.	HEAT TRANSFER	32
	Steady conduction through plates, spherical and cylindrical walls. Heat flow in three dimensions. Variable flow. Convection.	
4.	THERMOELECTRICITY	49
	Sources of thermal emf's. Thermodynamic relations for a thermocouple. Thermoelectric coefficients.	
5.	THERMOELECTRIC TEMPERATURE MEASUREMENTS	62
	Types of thermals and their characteristics. Thermocouple millivoltmeters and potentiometers. Measuring procedures.	
6.	RADIANT ENERGY	89
	Radiation terminology. Radiation laws for an ideal radiator. Radiation and absorption by a non-blackbody.	
7.	OPTICAL AND RADIATION PYROMETRY	111
	Total radiation pyrometer. Optical pyrometer. Temperatures of non-blackbodies. Extension of measuring range of instruments.	

8.	RESISTANCE THERMOMETRY	130
	Construction of resistance thermometers. Calibration. Resistance measurements. Applications.	
9.	TEMPERATURE RECORDING AND CONTROL	145
	Recording potentiometers. Characteristics of automatic control. Types of action in control equipment. Thermostats.	
10.	CALORIMETRY	171
	Types of calorimeters. Measurements of specific heats and heating values. Procedures for minimizing errors.	
11.	PHASE DIAGRAMS, THERMAL ANALYSIS	190
	The phase rule. Cooling curves. Determination of temperature-composition diagrams.	
12.	THERMODYNAMICS	209
	First and second laws of thermodynamics. Specific heats. Humidity. Thermodynamic efficiency. Absolute temperature scales.	
13.	EXTREME TEMPERATURES	226
	Liquefaction of gases. Approach toward absolute zero. High temperature furnaces.	
14.	SPECIAL METHODS OF TEMPERATURE MEASUREMENT	245
	Flame temperatures. Spectral line reversal. Pyrometric cones. Thermocolors. Interferometer.	
15.	INTERNATIONAL TEMPERATURE SCALE	262
	International agreements on the temperature scale. Experimental procedures recommended.	

PART II

LABORATORY EXPERIMENTS

1.	GAS THERMOMETER	275
2.	COEFFICIENT OF EXPANSION OF A LIQUID	277
3.	THERMAL CONDUCTIVITY OF A METAL	280
4.	THERMAL CONDUCTIVITY OF HEAT INSULATORS	283
5.	THERMAL CONDUCTIVITY, FORBES' BAR METHOD	286
6.	THERMAL CONDUCTIVITY OF GASES	289
7.	VISCOSITY OF A LIQUID	292
8.	VISCOSITY OF A GAS	297
9.	THERMOELECTRICITY	300

10.	COMPARISON METHOD OF THERMOCOUPLE CALIBRATION . . .	303
11.	PRECISION CALIBRATION OF A THERMOCOUPLE	306
12.	SURFACE TEMPERATURE MEASUREMENT	310
13.	THE RADIATION CONSTANT, CALORIMETRIC METHOD	313
14.	THE RADIATION CONSTANT, EQUILIBRIUM METHOD	315
15.	THE RADIATION CONSTANT, HEATED WIRE METHOD	316
16.	RADIATION PYROMETER	318
17.	OPTICAL PYROMETER	320
18.	SPECIFIC HEAT OF A LIQUID BY RADIATION METHOD	323
19.	RESISTANCE THERMOMETER	326
20.	A CONTINUOUS FLOW CALORIMETER	329
21.	SIMPLE FUEL CALORIMETER	332
22.	OXYGEN BOMB CALORIMETER	333
23.	GAS CALORIMETER	340
24.	THERMAL ANALYSIS	345
25.	RATIO OF THE SPECIFIC HEATS OF AIR	347
26.	VAPOR PRESSURE OF WATER; RELATIVE HUMIDITY	350
27.	PYROMETRIC CONES	356
28.	THE CURIE TEMPERATURE OF NICKEL	357
29.	MEASUREMENT OF FLAME TEMPERATURE	361

APPENDIX

HOW TO SOLVE PHYSICAL PROBLEMS	363
GENERAL LABORATORY PROCEDURE	364
LABORATORY REPORTS	368
VISUAL AIDS	369
SYMBOLS AND QUANTITIES	370

Tables

1.	Physical Constants	372
2.	Temperature Conversion Table	373
3.	The Chemical Elements: Their Atomic Numbers, Symbols, and Weights, and Their Melting Points on the International Temperature Scale	376

4.	Properties of Materials	378
5.	Platinum vs. Pt + 10% Rh Thermocouple (°C)	380
6.	Platinum vs. Pt + 10% Rh Thermocouple (°F)	382
7.	Platinum vs. Pt + 13% Rh Thermocouple (°C)	384
8.	Platinum vs. Pt + 13% Rh Thermocouple (°F)	386
9.	Chromel-Alumel Thermocouple (°C)	388
10.	Chromel-Alumel Thermocouple (°F)	390
11.	Copper-Constantan Thermocouple (°C)	392
12.	Copper-Constantan Thermocouple (°F)	393
13.	Iron-Constantan Thermocouple (°C)	394
14.	Iron-Constantan Thermocouple (°F)	395
15.	Thermal Emf of Important Thermocouple Materials Relative to Platinum	396
16.	Thermal Emf of Some Alloys Relative to Platinum	397
17.	Electrical Resistivity as a Function of Temperature	398
18.	Spectral Emissivity of Materials, Surface Unoxidized	400
19.	Spectral Emissivity of Oxides	401
20.	Total Emissivity of Metals, Surface Unoxidized	402
21.	Total Emissivity of Miscellaneous Materials	403
22.	True Temperatures Corresponding to Various Emissivities	404
23.	Properties of Tungsten	406
24.	Saturated Water Vapor Pressure and Density	407
25.	Trigonometric Functions	408
26.	Logarithms to the base e	409
27.	Logarithms to the base 10	411
	INDEX	413
