

CONTENTS

CHAPTER	PAGES
I. INTRODUCTORY	1-3
Rapid expansion of the industry under wartime conditions—Replacement of forgings by castings—Development of laboratories under A.I.D. supervision.	
II. QUOTATION	4-12
Factors to be considered in giving a quotation : (1) Number required ; (2) Alloy to be used ; (3) Purpose of casting ; (4) Whether machined ; (5) A.I.D. release ; (6) Sand or die ; (7) Possible changes in design ; (8) Question of acceptance—Quotation sheet—Delivery date.	
III. PATTERN AND DIE-MAKING	13-30
Patternmaking—Materials for patterns—Metal patterns—Coreboxes—Die-making—Design and preparation of the die—Gravity dies—Materials used—Runners and risers—Parting—Venting—Cores and pins—Design for easier production—Pressure dies—Materials used—Importance of heat-treatment of steels—Typical steels—General design of pressure dies—Dimensional limits.	
IV. MELTING	31-83
Properties of light alloys—Shrinkage—Hot-shortness—Chemical properties of aluminium : Affinity for oxygen—Absorption of hydrogen—"Pin-holing"—Degassification—Grain refining—Melting procedure—Storage and issue of metal—Fluxing and fluxes—Fuels—Types of furnace—Preparation of alloys in the foundry—Use of hardeners—Classification of alloys—Use of scrap—A.I.D. and B.S. specifications—Properties of alloys—"Modification" of 2 L 33—L.A.C. alloys—S.T.A. 7 Schedule—Aluminium bronze—Slush casting—Cleanliness of tools.	
V. SAND CONTROL	84-104
Properties of foundry sand—Green and dry strength—Permeability—Principles of sand control—Estimation of moisture—Methods of determining properties—Grain size and clay content—Synthetic sands—Properties of core sands—Core-binding materials—Technique for high-magnesium alloys.	
VI. MOULDING AND SAND CASTING	105-149
Moulding-boxes—Facing and backing sands—Milling and aerating—Oddside moulding—Risers—Chills—Runners—Technique card—Casting temperature—Use of X-rays—Split patterns—Making several castings at once—Types of moulding-machines—Large castings—Flat castings—Durville method—Cores—Core stoves—Core inspection.	
VII. DIE PREPARATION AND CASTING	150-179
Advantages and disadvantages of dies—Heating and dressing gravity dies—Chilling—Use of "gassing" materials—Importance of time cycle—Technique card—Layout of die-shop—Metal control—Alloys used—Fluxing—Pressure dies : types of machine—Alloys for pressure die-casting—Casting billets—Types of mould—Segregation.	
VIII. FETTLING AND REPAIRING	180-197
Equipment of fettling shop—Collaboration with inspection—Welding—Fluxes for gas-welding—Electric welding—"Burning"—Gas-tight castings—Soldering.	

CHAPTER	PAGES
IX. HEAT-TREATMENT	198-214
Solid solutions—Principles of heat-treatment—Methods for particular alloys—Types of furnace—Furnace management—Quenching tank—Heat-treatment records.	
X. INSPECTION AND LABORATORY ASSISTANCE	215-247
Inspection requirements—Collaboration between foundry and laboratory—Duties of metallurgist—Foundry assistance—Metal control—Spot-testing of scrap—Pyrometry—Control of casting temperatures—X-ray—Test-bars—Heat-treatment supervision—A.I.D. release note—Organisation of laboratory work—Etching reagents—Inspection routine—Code of failures—Special tests for castings—Dimensional inspection.	
XI. AFTER-TREATMENT	248-280
Mechanical treatment—Sand-blasting—Polishing—Chemical treatment—Etching—M.B.V. process—Painting—Electro-plating—Preparation of surface—Plating baths—Anodic oxidation—Dyeing and sealing of anodic films.	
XII. MACHINING	281-287
Machinability of aluminium alloys—Turning-tools—Milling—Drilling—Tapping—Sawing—Filing.	
XIII. CORROSION	288-302
Definition—Tests of corrosion resistance—Factors in corrosion—Summary of available information—Rapid tests.	
XIV. GENERAL ORGANISATION	303-309
Movement of metal and of sand—Quotation and progressing—Foundry layout—Costing—Welfare—Statistical control.	
XV. FUTURE OUTLOOK	310-319
Value of wartime experience—Development of "secondary" metal—World resources of aluminium—Possibilities of anodising—Anodised aluminium dies—New uses for aluminium castings—Trade information—Aluminium Development Association.	
INDEX	321-326

LIST OF TABLES

TABLE	
I. Approximate compositions of sand-casting alloys as standardised in America	56
II. Approximate compositions of gravity die-casting alloys as standardised in America	57
III. Approximate compositions of pressure die-casting alloys as standardised in America	57
IV. D.T.D. specifications for casting alloys	60-61
V. British Standard Specifications for casting alloys	62
VI. Some typical alloys used in Europe	63
VII. Mechanical qualities of aluminium casting alloys at elevated temperatures	66
VIII. Compositions of L.A.C. alloys	72
IX. Effect of varying water content on the green compression strength of a Belgian yellow sand	91
X. Aperture sizes of British Standard sieves	96
XI. Heat-treatment of aluminium casting alloys	203
XII. Alkaline cleaning solutions for castings prior to electro-plating	258
