Preface xix

How to Use This Book xxiii

I CONTINUUM MECHANICS 1

1 Kinematics 3

1.1 Motion 5

1.1.1 Compatibility 7

1.2 Vectors: Material Velocity 8

1.3 One-Forms 11

1.3.1 Duality Product..... 13

1.4 Tensors 14

1.5 Covariant Derivative 14

1.5.1 Evolution of Connection Coefficients 16

1.6 Metric..... 17

1.6.1 Covariant Derivative of the Metric 19

1.7 Deformation Rate and Vorticity 19

1.8 Lie Derivative 22

1.9 Euler Derivative 24

1.10 Material Derivative 24

1.11 Corotational Material Derivative 25

1.12 Levi-Civita Density and Capacity 26

1.13 Levi-Civita Pseudotensor and Volume Form 27

1.14 Pullback and Pushforward..... 30

1.15 Volumes 31

1.16	Jacobian of the Motion.....	33
1.17	Surfaces	34
1.18	Reynolds Transport Theorem	39
1.18.1	Lagrangian Version	45
1.19	Conservation of Mass.....	45
1.19.1	Lagrangian Version	47
1.20	Strain.....	48
1.20.1	Deformation Gradient Tensor	48
1.20.2	Cauchy–Green Tensor	50
1.20.3	Stretch Tensor	54
1.20.4	Lagrangian or Material Strain Tensor	55
1.20.5	Eulerian or Almansi Strain Tensor	56
1.20.6	Logarithmic or Hencky Strain Tensor	57
1.20.7	Seth–Hill Strain Tensors	57
1.20.8	Arguments for Logarithmic Strain	57
1.20.9	Logarithmic Strain Rate	59
1.20.10	Strain as a Two-Vector	61
2	Dynamics	65
2.1	Stress	65
2.1.1	Cauchy Stress Tensor	65
2.1.2	Kirchhoff Stress Tensor	66
2.1.3	Second Piola–Kirchhoff Stress	67
2.1.4	First Piola–Kirchhoff Stress.....	67
2.2	Thermodynamics	73
2.2.1	First Law of Thermodynamics	73
2.2.2	Second Law of Thermodynamics	76
2.2.3	Helmholtz Free Energy	77
2.2.4	Elasticity	79
2.2.5	Material Frame Indifference	80
2.3	Constitutive Relationships	82
2.3.1	Truesdell Stress Rate	83
2.3.2	Logarithmic Stress Rate.....	86
2.3.3	Viscosity	91
2.4	Hamilton’s Principle	92
2.5	Conservation of Linear Momentum.....	95
2.6	Noether’s Theorem	99

2.6.1	Conservation of Linear Momentum (Revisited).....	103
2.6.2	Conservation of Angular Momentum	103
2.6.3	Conservation of Energy	106
2.7	Rotation	121
2.7.1	Centrifugal Potential	121
2.8	Self-Gravitation	122
2.8.1	Poisson's Equation	122
2.8.2	Gravitational Energy	123
2.8.3	Action Due to Gravity	124
2.9	Navier–Stokes Equations.....	124
2.10	Equations of Motion in Terms of Displacement	125

Continuum Mechanics Glossary	129
---	------------

3 Defects.....	133
3.1 Integrability	135
3.2 Compatible Motion	136
3.3 Tetrad Formalism.....	138
3.4 Connection.....	139
3.5 Metric.....	140
3.6 Torsion and Curvature	141
3.6.1 Eulerian Description	141
3.6.2 Lagrangian Description: Incompatibilities	142
3.7 Nonmetricity.....	146
3.8 Application to Defects.....	148
3.8.1 Lagrangian Dynamics of Defects	149
3.8.2 Mixed Dynamics of Defects	150
3.8.3 Four-Dimensional Kinematics of Defects	152
3.8.4 Incompatibilities.....	152
3.9 Alternative Approach Based on a Referential Manifold.....	153
3.10 Three-Dimensional Dynamics and Kinematics of Defects.....	157
3.10.1 Three-Dimensional Incompatibilities	160
3.10.2 Burgers and Frank Vectors	161
3.11 Variational Approach	162
3.11.1 Properties of the 4D Volume Form	163
3.11.2 Material Geometry Action.....	165
3.11.3 Defect Action	167
3.11.4 Defect Field Equations.....	168

3.11.5	Anatomy of the Defect Hypermomentum Current	169
3.11.6	Anatomy of the Lagrangian Connection Coefficients	169
3.11.7	Defect Dynamics	170
3.11.8	Metricity	172
3.11.9	Linear Defect Equations	173
3.11.10	Three-Dimensional Defect Equations	174
3.12	Continuum Mechanics with Spin	177
3.12.1	Anatomy of the Stress-Energy and Spin Tensors	178
3.12.2	Classical Conservation Laws with Spin	179
3.12.3	Stress and Couple-Stress Gluts	180

II Seismology 183

4	Linearized Equations of Motion	185
4.1	Simplified Notation	185
4.2	Infinitesimal Strain	186
4.3	Constitutive Relationship without Prestress	186
4.4	Elastic Wave Equation	188
4.4.1	Plane-Wave Solutions.....	189
4.4.2	Weak Form	190
4.5	Acoustic Wave Equation	191
4.5.1	Weak Form	192
4.6	Earthquake Fault	192
4.6.1	Ideal Fault	194
4.6.2	Earthquake Source Contribution	196
4.7	Betti Reciprocal Relation	197
4.7.1	Reciprocity.....	198
4.7.2	Volterra Representation Theorem	199
4.7.3	Fault Slip.....	200
4.8	Moment Tensor	200
4.8.1	Ideal Fault	201
4.8.2	Beach Balls	202
4.8.3	Source-Time Function.....	203
4.9	Seismology with Spin	204
4.9.1	Alternative Approach	207

4.9.2	Homogeneous Medium	207
4.9.3	Couple-Moment Tensor	210
4.10	Equilibrium State	211
4.10.1	Hydrostatic Earth Model	213
4.10.2	Spherically Symmetric Earth Model	213
4.10.3	Ellipticity	214
4.11	Density Perturbations	217
4.12	Gravity Perturbations	218
4.13	Constitutive Relationship with Prestress	219
4.14	Displacement Variational Principle	221
4.15	Displacement-Potential Variational Principle	223
4.16	Elastic Tensor Selection	224
4.17	Fluid Regions	226
4.17.1	Potential Formulation	227
4.18	Quasi-Hydrostatic Approximation	228
4.19	Generalized Betti Reciprocal Relation	230
4.19.1	Generalized Reciprocity	231
4.19.2	Generalized Volterra Representation Theorem	233
4.20	Idealized Seismometer Response	233
4.21	Weak Global Equations of Motion	234
4.22	Cowling Approximation	238
4.23	Ocean-Load Approximation	239
4.24	Global Body-Wave Propagation	240
4.25	Seismic Noise	240
4.25.1	Noise Cross-Correlation	241
5	Anelasticity and Attenuation	243
5.1	Creep and Stress Relaxation Functions	243
5.2	Springs and Dashpots	244
5.3	Standard Linear Solid	245
5.4	Linear Combination of Standard Linear Solids	247
5.5	Linear Viscoelasticity	249
5.5.1	Maxwell Rheology	251
5.6	Constant-Q Absorption Band Model	252
5.7	Viscoacoustics	253
	Seismology Glossary	257

III Forward Problems 259

6	Strong Methods	261
6.1	Finite-Difference Method	262
6.1.1	Taylor Series and Finite Differences	262
6.1.2	Homogeneous Wave Equation	264
6.1.3	Inhomogeneous Wave Equation	266
6.1.4	Grid Dispersion	268
6.1.5	Staggered Grids	269
6.1.6	Shallow-Water Waves	270
6.1.7	Grid Anisotropy	271
6.1.8	Heat Equation	272
6.2	Pseudospectral Method	274
6.2.1	Fourier Transform	275
6.2.2	Velocity-Stress Wave Equation	276
6.2.3	Grid Dispersion	276
7	Weak Methods	279
7.1	Rayleigh–Ritz Method	279
7.1.1	Coupled-Mode Method	281
7.1.2	Direct-Solution Method	281
7.2	Boundary-Element Method	282
7.3	Finite-Element Method	282
7.3.1	Static Heat Equation	282
7.3.2	Dynamic Heat Equation	291
7.3.3	Generalized Trapezoidal Time Scheme	292
7.3.4	Local-Element Method	293
7.3.5	General Finite-Element Method	294
7.4	Spectral-Element Method	297
7.4.1	Dynamic Heat Equation	299
7.4.2	Wave Equation	301
7.4.3	Newmark Time Scheme	303
7.4.4	General Spectral-Element Method	303
7.4.5	3D Seismic Wave Equation	306
7.4.6	Absorbing Boundary Conditions	308
7.4.7	Attenuation	309
7.4.8	Compact Notation	309

7.4.9	Hexahedral Meshing.....	312
7.4.10	Cubed Sphere.....	313
7.4.11	Global Wave Propagation Simulations	314
7.4.12	Normal-Mode Benchmarks	318
7.5	Discontinuous Galerkin Method.....	318
7.6	Infinite-Element Method	322
7.7	Spectral-Infinite-Element Method.....	325
7.7.1	Self-Gravitation.....	326
7.7.2	Coseismic and Post-Earthquake Deformation	329
7.7.3	Examples	333
7.7.4	Full-Gravity Global Wave Propagation Simulations	333
7.7.5	Idealized Seismometer Response	339

IV Inverse Problems 341

8	Adjoint-State Method	343
8.1	Born Approximation	344
8.1.1	Unperturbed Equations of Motion	345
8.1.2	Perturbed Equations of Motion.....	345
8.2	Waveform Tomography	348
8.3	Adjoint Equations	352
8.4	Lagrange Multiplier Method.....	353
8.5	Traveltime Tomography	355
8.5.1	Banana-Doughnut Kernels	355
8.5.2	Cross-Correlation Traveltime Misfit Kernels	358
8.5.3	Differential-Traveltime Tomography	360
8.6	Amplitude Tomography	360
8.7	Attenuation	362
8.8	Generic Tomography	362
8.9	Point-Source Perturbations	364
8.10	Topography on Internal Discontinuities	366
8.11	Source Encoding	367
8.11.1	Encoded Forward Wavefield.....	369
8.11.2	Source-Encoded Inversion	370
8.11.3	Fréchet Derivatives	372
8.11.4	Attenuation	373
8.11.5	Laplace-Domain Source Encoding	374

8.12	Interferometry	375
8.12.1	Noise Cross-Correlation Tomography.....	381
9	Optimization	385
9.1	Preliminaries	386
9.2	Model Parameter Selection	387
9.3	Objective Function.....	388
9.4	Bayesian Inference	391
9.4.1	Linear Inverse Problems	393
9.5	Local Optimization	395
9.5.1	Secant Method.....	397
9.5.2	Steepest Descent Method	398
9.5.3	Conjugate-Gradient Method	398
9.5.4	Variable Metric Method	399
9.5.5	DFP Method	401
9.5.6	BFGS Method	401
9.5.7	L-BFGS Method	402
9.6	Preconditioning.....	403
9.7	Regularization	404
9.7.1	Tikhonov Regularization	404
9.7.2	Total Variation Regularization.....	404
9.7.3	Projection.....	405
9.7.4	Smoothing	405
9.7.5	Level-Set Methods	405
9.8	Multiscale Inversion	406
9.9	Line Search	406
9.9.1	Bracketing Line Search	407
9.9.2	Backtracking Line Search	407
9.10	Point-Spread Function	407
9.11	Uncertainty Quantification	408
9.11.1	Exploration Seismology	411
9.11.2	Global Seismology	414
	Introduction to the Appendices	415
A	Linear Spaces and Transformations	417
A.1	Properties of Linear Spaces.....	417
A.2	Vector Spaces.....	418
A.3	Linear Transformations	418

B	Differentiable Manifolds	421
B.1	Charts and Coordinates	421
B.2	Definition	423
B.3	Local Coordinate Changes	424
B.4	Functions on Manifolds	424
B.5	Orientable Manifolds	424
C	Vectors and One-Forms	427
C.1	Vectors	427
C.1.1	Vectors as Tangents to Curves	428
C.1.2	Bases and Coordinates	429
C.1.3	Vector Field	431
C.1.4	Transformations	431
C.2	One-Forms	433
C.2.1	Duality	433
C.2.2	Bases	434
C.2.3	Transformations	436
C.3	Alternative Perspective	436
C.4	Lie Bracket	437
D	Tensors	441
D.1	Definition	441
D.2	Operations on Tensors	443
D.2.1	Addition	443
D.2.2	Tensor Product	443
D.2.3	Contraction	444
D.2.4	Transpose of (2,0) and (0,2) Tensors	445
D.2.5	Transpose of a (1,1) Tensor	446
D.3	Transformations	446
D.3.1	Tetrad Formalism	447
D.3.2	Pseudotensors	448
D.4	Kronecker or Identity Tensor	448
D.5	Logarithms and Exponentials of (1,1) Tensors	449
D.6	Tensor Densities and Capacities	449
D.6.1	Pseudotensor Densities and Capacities	450
D.7	Levi-Civita Density and Capacity	450
D.7.1	Cross Product	451
D.8	Determinant of Rank-2 Tensors	451

D.9	Inverse of Rank-2 Tensors	452
D.10	Metric Tensor	452
D.10.1	Formulation	453
D.10.2	Geometrical Meaning	455
D.10.3	Norm of Vectors and One-Forms	455
D.10.4	Metric in Tetrads	456
D.11	Adjoint of a (1,1) Tensor	456
D.12	Tensor Densities and Capacities Revisited	457
D.13	Levi-Civita Pseudotensor	457
D.13.1	Cross Product	458
D.14	Kronecker Determinants	458
D.15	Rotations	460
D.15.1	Euler Angles	461
D.15.2	Rodrigues's Formula	463
E	Maps between Manifolds	465
E.1	Maps	465
E.2	Maps between Manifolds of Different Dimensions	466
E.2.1	Pullback	466
E.2.2	Pushforward	468
E.3	Maps between Manifolds of the Same Dimensions	470
F	Differentiation on Manifolds	471
F.1	Covariant Derivative	471
F.1.1	Formulation	471
F.1.2	Transformation of Connection Coefficients	474
F.1.3	Divergence	475
F.1.4	Parallel Transport	475
F.1.5	Torsion and Curvature Tensors	477
F.1.6	Bianchi Identities	479
F.1.7	Torsion-Free Connection	480
F.1.8	Covariant Derivative of the Metric Tensor	480
F.1.9	Mixed Covariant Derivative in Tetrad Basis	483
F.1.10	Spin Connection	484
F.1.11	Contracted Bianchi Identities	484
F.1.12	Covariant Derivative of Tensor Densities and Capacities	486
F.1.13	Nonmetricity	486

F.2	Euler Derivative	486
F.3	Lie Derivative	487
F.3.1	Lie Derivative of Vectors.....	488
F.3.2	Geometrical Interpretation	490
F.3.3	Autonomous Lie Derivative	491
F.3.4	Lie Derivative of One-Forms	491
F.3.5	Lie Derivative of (p,q) Tensors	492
F.3.6	Lie Derivative of Functions	493
F.3.7	Lie Derivative of Metric Tensors.....	493
F.3.8	Lie Derivative of Levi-Civita Tensor	494
G	Differential Forms	495
G.1	Definition	495
G.2	Operations on Forms	498
G.2.1	Addition	498
G.2.2	Exterior Product	498
G.2.3	Interior Product	499
G.3	k -Vectors	500
G.4	Hodge Dual	501
G.5	Volumes	502
G.5.1	Properties.....	503
G.6	Surfaces	503
G.7	Exterior Derivative	504
G.7.1	Coordinate-Free Definition.....	505
G.7.2	Cartesian Examples.....	506
G.7.3	Exact Forms	507
G.7.4	Commutativity with Pullback and Pushforward	508
G.8	Lie Derivative of a Form.....	508
G.9	Vector- and Tensor-Valued Forms	510
G.9.1	Transformations of Tensor-Valued Forms	511
G.9.2	Operations on Tensor-Valued Forms	511
G.9.3	Connection One-Forms	512
G.9.4	Torsion Two-Forms.....	513
G.9.5	Exterior Covariant Derivative	515
G.9.6	Covariant Lie Derivative.....	516
G.9.7	Curvature Two-Forms	517
G.9.8	Commutator of Covariant Lie and Exterior Covariant Derivatives ...	519

	G.9.9	Bianchi Identities Revisited	519
	G.9.10	Nonmetricity Revisited	520
G.10		Integration of Forms	520
	G.10.1	Line Integrals	520
	G.10.2	Surface Integrals	521
	G.10.3	Volume Integrals.....	522
G.11		Generalized Stokes's Theorem	523
	G.11.1	Fundamental Theorem of Calculus	523
	G.11.2	Green's Theorem	524
	G.11.3	Gauss's Theorem	525
	G.11.4	Stokes's Theorem.....	525
	G.11.5	Variational Principles	525
	G.11.6	Noether's Theorem	526

Appendix Glossary 529
