Preface and comments to 1st & 2nd editions. Literature	1
Rough guide to notation	4
Distant outline of quantum physics	6
Introduction	9
Quantum level. Double-slit experiment . . . . .	9
Wavefunction. Superposition & interference . . . . .	11
Quantum measurement . . . . .	13
1a. Space of quantum states	15
Hilbert space & rigged Hilbert space . . . . .	15
Dirac notation. Linear operators & projectors . . . . .	18
Sums & products of spaces. Composite systems & entangled states .	20
1b. Examples of quantum Hilbert spaces	22
Single structureless particle with spin 0 or $\frac{1}{2}$ . . . . .	22
Ensembles of distinguishable particles . . . . .	25
Indistinguishable particles. Bosons & fermions. Fock space . . . . .	26
Artificial systems . . . . .	30
2a. Representation of quantum observables	32
Operators associated with observables . . . . .	32
Eigenvalues & eigenvectors in finite & infinite dimension . . . . .	34
Probability of measurement outcomes . . . . .	41
2b. Examples of quantum observables	42
Spin- $\frac{1}{2}$ operators . . . . .	42
Coordinate & momentum . . . . .	43
Hamiltonian of free particle & particle in potential . . . . .	44
Orbital angular momentum. Isotropic Hamiltonians . . . . .	48
Hamiltonian of a particle in electromagnetic field . . . . .	53
Hamiltonians of simple coupled systems . . . . .	55
3a. Compatible and incompatible observables	57
Compatible observables. Complete set . . . . .	57
Incompatible observables. Uncertainty relation . . . . .	59
Analogy with Poisson brackets . . . . .	60

Equivalent representations . . . . .	61
<b>3b. Examples of observable sets</b>	<b>63</b>
Coordinate & momentum. Ladder operators . . . . .	63
Coordinate & momentum representations . . . . .	66
Angular momentum operators . . . . .	68
Addition of two or more angular momenta . . . . .	71
Complete sets of commuting operators for structureless particle . . . . .	76
<b>4a. Representation of physical transformations</b>	<b>77</b>
Properties of unitary operators . . . . .	78
Canonical & symmetry transformations . . . . .	79
Fundamentals of group theory . . . . .	82
<b>4b. Examples of symmetry transformations</b>	<b>86</b>
Space translation . . . . .	86
Space rotation . . . . .	88
Irreducible representations of the rotation group . . . . .	92
Spherical tensor operators . . . . .	94
Space inversion . . . . .	97
Time translation & reversal. Galilean transformations . . . . .	98
Symmetry and degeneracy . . . . .	101
<b>5a. Unitary time evolution</b>	<b>103</b>
Evolution operator & Schrödinger equation . . . . .	103
Single-particle probability current . . . . .	104
Conservation laws & symmetries . . . . .	107
Energy $\times$ time uncertainty . . . . .	108
Hamiltonians depending on time. Dyson series . . . . .	112
Schrödinger, Heisenberg & Dirac description . . . . .	113
Green operator. Single-particle propagator . . . . .	115
<b>5b. Examples of unitary evolution</b>	<b>118</b>
Two-level system . . . . .	118
Free particle . . . . .	119
Coherent states in harmonic oscillator. Ehrenfest theorem . . . . .	121
Spin in rotating magnetic field . . . . .	124
<b>6a. Quantum statistical ensembles</b>	<b>126</b>
Density operator. Generalized quantum states . . . . .	126
Entropy. Canonical ensemble . . . . .	129

Equivalent representations . . . . .	61
<b>3b. Examples of observable sets</b>	<b>63</b>
Coordinate & momentum. Ladder operators . . . . .	63
Coordinate & momentum representations . . . . .	66
Angular momentum operators . . . . .	68
Addition of two or more angular momenta . . . . .	71
Complete sets of commuting operators for structureless particle . . . . .	76
<b>4a. Representation of physical transformations</b>	<b>77</b>
Properties of unitary operators . . . . .	78
Canonical & symmetry transformations . . . . .	79
Fundamentals of group theory . . . . .	82
<b>4b. Examples of symmetry transformations</b>	<b>86</b>
Space translation . . . . .	86
Space rotation . . . . .	88
Irreducible representations of the rotation group . . . . .	92
Spherical tensor operators . . . . .	94
Space inversion . . . . .	97
Time translation & reversal. Galilean transformations . . . . .	98
Symmetry and degeneracy . . . . .	101
<b>5a. Unitary time evolution</b>	<b>103</b>
Evolution operator & Schrödinger equation . . . . .	103
Single-particle probability current . . . . .	104
Conservation laws & symmetries . . . . .	107
Energy $\times$ time uncertainty . . . . .	108
Hamiltonians depending on time. Dyson series . . . . .	112
Schrödinger, Heisenberg & Dirac description . . . . .	113
Green operator. Single-particle propagator . . . . .	115
<b>5b. Examples of unitary evolution</b>	<b>118</b>
Two-level system . . . . .	118
Free particle . . . . .	119
Coherent states in harmonic oscillator. Ehrenfest theorem . . . . .	121
Spin in rotating magnetic field . . . . .	124
<b>6a. Quantum statistical ensembles</b>	<b>126</b>
Density operator. Generalized quantum states . . . . .	126
Entropy. Canonical ensemble . . . . .	129

Wigner quasiprobability distribution . . . . .	131
Density operator for open systems . . . . .	132
Evolution of density operator: closed & open systems . . . . .	135
<b>6b. Examples of statistical ensembles</b>	<b>138</b>
Harmonic oscillator at nonzero temperature . . . . .	138
Coherent superposition vs. statistical mixture . . . . .	139
Density operator and decoherence for a two-state system . . . . .	140
<b>7a. Quantum measurement</b>	<b>143</b>
State vector reduction. Interpretation problems . . . . .	143
A model of measurement. Repeated measurements . . . . .	146
Measurements on entangled states. EPR situation . . . . .	149
Quantum nonlocality & Bell inequalities . . . . .	153
<b>7b. Examples of quantum measurements</b>	<b>156</b>
Destructive & nondestructive measurements . . . . .	156
Production & measurement of entangled states . . . . .	158
<b>8. Links between Quantum and Classical</b>	<b>160</b>
Classical limit of quantum theory . . . . .	160
Feynman integral. Aharonov-Bohm effect. Level density . . . . .	164
Semiclassical approximation . . . . .	169
<b>9. Quantum information</b>	<b>174</b>
Quantum information channel . . . . .	175
Quantum computation . . . . .	176
<b>10. Stationary approximation methods</b>	<b>181</b>
Variational method . . . . .	181
Stationary perturbation method . . . . .	184
Application in atomic physics . . . . .	189
Application to level dynamics . . . . .	193
<b>11. Nonstationary approximation methods</b>	<b>197</b>
Nonstationary perturbation method . . . . .	197
Application to stimulated electromagnetic transitions . . . . .	203
Driven systems . . . . .	207
<b>12. Scattering: Iterative approaches</b>	<b>210</b>
Elementary description of elastic scattering . . . . .	211

General formalism: Lippmann-Schwinger equation . . . . .	215
Application to elastic scattering . . . . .	219
<b>13. Scattering: Partial waves</b>	<b>222</b>
Elastic scattering via partial waves . . . . .	223
Inclusion of inelastic scattering . . . . .	229
Low-energy & resonance scattering . . . . .	232
<b>14. Bosonic &amp; Fermionic systems</b>	<b>234</b>
Hilbert space of bosons & fermions . . . . .	234
Bosonic & fermionic creation/annihilation operators . . . . .	235
Operators in bosonic & fermionic $N$ -particle spaces . . . . .	241
Quantization of electromagnetic field . . . . .	247
<b>15. Many-body techniques</b>	<b>249</b>
Fermionic mean field & Hartree-Fock method . . . . .	249
Bosonic condensates & Hartree-Bose method . . . . .	253
Pairing & BCS method . . . . .	254
Quantum gases . . . . .	259
<b>Concluding words</b>	<b>266</b>
<b>Index</b>	<b>267</b>
