

## Contents:

Preface.....	4
1. Introduction.....	4
2. Attention limitations.....	6
3. The effect of daytime sleep and quality of nocturnal sleep on daytime sleepiness in patients with obstructive sleep apnoea .....	24
4. Possibilities using of method of EEG artefacts for assesment of vehicle driver' attention .....	36
5. Possibilities of simulations when testing drivers' reliabilities .....	42
6. Driving, neurobehavioral disorders and medical fitness standards for railway staff.....	53
7. EEG Spectra Classification by Radial Implicative Fuzzy Systems .....	60
8. Scalar score and suppression of artifacts in EEG .....	69
9. Tree-based EEG classifiers for somnolence detection: model search computational experiments .....	80
10. In-car warning systems .....	97
11. Analysis of visual field and reaction time in correlation with the vigilance decreasing.....	110
12. Car-human Interaction: Injury During Closed Head Impact .....	153
13. Injury Biomechanics of Wheelchair Users Traveling in a Car and Comparison of Head Injury Criterion.....	159
14. Cyclist – Car Interaction During Side Impact.....	168
15. Distributed Approach to Neuroinformatic Data Interchange .....	179
16. Using AAM for Visual Diagnostics of Vehicle Driver .....	187
17. The concept of cooperative simulators .....	195
18. Answer a visual analyzer while driving in the real world and simulator for parallel motor task.....	204
19. Perspectives.....	213
