Chapter 23 *Developmental mechanisms of evolutionary change* 751

Contents

p a r t **1** *Principles of developmental biology*

CHAPTER 1 Developmental biology: The anatomical tradition 3

- The Questions of Developmental Biology 4
- Approaches to Developmental Biology 5
- The Anatomical Approach 5
 - Comparative embryology* 5
 - Epigenesis and preformation* 6
 - Naming the parts: The primary germ layers and early organs* 8
 - The four principles of Karl Ernst von Baer* 8
 - Fate mapping the embryo* 10
 - Cell migration* 13
- Evolutionary Embryology 14
 - Embryonic homologies* 15
- Medical Embryology and Teratology 16
- Mathematical Modeling of Development 18
 - The mathematics of organismal growth* 18
 - The mathematics of patterning* 19

CHAPTER 2 Life cycles and the evolution of developmental patterns 25

- The Circle of Life: The Stages of Animal Development 25
- The Frog Life Cycle 26
- The Evolution of Developmental Patterns in Unicellular Protists 30
 - Control of developmental morphogenesis: The role of the nucleus* 30

Unicellular protists and the origins of sexual reproduction 32

Multicellularity: The Evolution of Differentiation 33

- The Volvocaceans* 34

■ **Sidelights & Speculations:** *Sex and Individuality in Volvox* 36

Differentiation and morphogenesis in Dictyostelium:
Cell adhesion 39

■ **Sidelights & Speculations:** *Rules of Evidence I* 42

- Differentiation in Dictyostelium* 43

Developmental Patterns among the Metazoa 44

- The diploblasts* 46
- Protostomes and deuterostomes* 46

CHAPTER 3 Principles of experimental embryology 51

- Environmental Developmental Biology 51
 - Environmental sex determination* 52
 - Adaptation of embryos and larvae to their environments* 52
- The Developmental Dynamics of Cell Specification 56
 - Autonomous specification* 56
 - Conditional specification* 58
- **Sidelights & Speculations:** *Rules of Evidence II* 67
 - Stem cells and commitment* 68
 - Syncytial specification* 69
- Morphogenesis and Cell Adhesion 69
 - Differential cell affinity* 70
 - The thermodynamic model of cell interactions* 71
 - Cadherins and cell adhesion* 74

CHAPTER 4 *The genetic core of development* 81

- The Embryological Origins of the Gene Theory 81
 - Nucleus or cytoplasm: Which controls heredity?* 81
 - The split between embryology and genetics* 83
 - Early attempts at developmental genetics* 84
- Evidence for Genomic Equivalence 85
 - Amphibian cloning: The restriction of nuclear potency* 85
 - Amphibian cloning: The totipotency of somatic cells* 86
 - Cloning mammals* 87
- **Sidelights & Speculations:** *Why Clone Mammals?* 89
- **Sidelights & Speculations:** *The Exception to the Rule: Immunoglobulin Genes* 90
- Differential Gene Expression 92
- RNA Localization Techniques 93
 - Northern blotting* 93
 - Reverse transcriptase-polymerase chain reaction* 93
 - Microarrays and macroarrays* 96
 - In situ hybridization* 97
- Determining the Function of Genes During Development 98
 - Transgenic cells and organisms* 98
 - Determining the function of a message: Antisense RNA* 101
- Coda 104

CHAPTER 5 *The paradigm of differential gene expression* 107

- Differential Gene Transcription 107
 - Anatomy of the gene: Exons and introns* 107
 - Anatomy of the gene: Promoters and enhancers* 111
 - Transcription factors* 114
 - Transcription factor cascades* 117
- **Sidelights & Speculations:** *Studying DNA Regulatory Elements* 118
 - Silencers* 120
- Methylation Pattern and the Control of Transcription 121
 - DNA methylation and gene activity* 121
 - Chromatin modification* 122
 - Insulators* 123
- **Sidelights & Speculations:** *Genomic Imprinting* 123
 - Transcriptional regulation of an entire chromosome: Dosage compensation* 124
- **Sidelights & Speculations:** *The Mechanisms of X Chromosome Inactivation* 126

- Differential RNA Processing 127
 - Control of early development by nuclear RNA selection* 128
 - Creating families of proteins through differential nRNA splicing* 129
- **Sidelights & Speculations:** *Differential nRNA Processing and Drosophila Sex Determination* 131
- Control of Gene Expression at the Level of Translation 132
 - Differential mRNA longevity* 132
 - Selective inhibition of mRNA translation* 132
 - Control of RNA expression by cytoplasmic localization* 134
 - Posttranslational regulation of gene expression* 135

CHAPTER 6 *Cell-cell communication in development* 143

- Induction and Competence 143
 - Cascades of induction: Reciprocal and sequential inductive events* 145
 - Instructive and permissive interactions* 145
 - Epithelial-mesenchymal interactions* 147
- Paracrine Factors 149
 - The fibroblast growth factors* 150
 - The Hedgehog family* 151
 - The Wnt family* 152
 - The TGF- β superfamily* 153
 - Other paracrine factors* 153
- Cell Surface Receptors and Their Signal Transduction Pathways 154
 - The receptor tyrosine kinase (RTK) pathway* 154
- **Sidelights & Speculations:** *The RTK Pathway and Cell-to-Cell Induction* 155
 - The Smad pathway* 159
 - The JAK-STAT pathway* 159
 - The Wnt pathway* 161
 - The Hedgehog pathway* 161
- Cell Death Pathways 164
- Juxtacrine Signaling 166
 - The Notch pathway: Juxtaposed ligands and receptors* 166
- **Sidelights & Speculations:** *Cell-Cell Interactions and Chance in the Determination of Cell Types* 167
 - The extracellular matrix as a source of critical developmental signals* 168
 - Direct transmission of signals through gap junctions* 171
- Cross-Talk between Pathways 172
- Maintenance of the Differentiated State 173
- Coda 174

p a r t **2** *Early embryonic development*

**CHAPTER 7 Fertilization:
Beginning a new organism 183**

Structure of the Gametes 183

Sperm 183

The egg 186

Recognition of Egg and Sperm 189

Sperm attraction: Action at a distance 189

The acrosome reaction in sea urchins 191

■ **Sidelights & Speculations: Action at a Distance:
Mammalian Gametes** 192

Species-specific recognition in sea urchins 194

Gamete binding and recognition in mammals 195

Gamete Fusion and the Prevention of Polyspermy 197

Fusion of the egg and sperm cell membranes 197

The prevention of polyspermy 198

The Activation of Egg Metabolism 203

Early responses 204

■ **Sidelights & Speculations: The Activation of Gamete
Metabolism** 206

Late responses 208

Fusion of the Genetic Material 209

Fusion of genetic material in sea urchins 209

Fusion of genetic material in mammals 209

Rearrangement of the Egg Cytoplasm 210

■ **Sidelights & Speculations: The Nonequivalence of
Mammalian Pronuclei** 212

**CHAPTER 8 Early development in
selected invertebrates 221**

**AN INTRODUCTION TO EARLY
DEVELOPMENTAL PROCESSES 221**

Cleavage 221

From fertilization to cleavage 222

The cytoskeletal mechanisms of mitosis 223

Patterns of embryonic cleavage 224

Specification of cell fates during cleavage 226

Gastrulation 226

Cell Specification and Axis Formation 226

**THE EARLY DEVELOPMENT OF
SEA URCHINS 227**

Cleavage in Sea Urchins 227

Blastula formation 227

Fate maps and the determination of sea urchin blastomeres 228

Sea Urchin Gastrulation 233

Ingression of primary mesenchyme 233

First stage of archenteron invagination 236

Second and third stages of archenteron invagination 237

THE EARLY DEVELOPMENT OF SNAILS 239

Cleavage in Snail Embryos 239

*Fate map of *Ilyanassa obsoleta** 241

The polar lobe: Cell determination and axis formation 242

■ **Sidelights & Speculations: Adaptation by Modifying
Embryonic Cleavage** 242

Gastrulation in Snails 245

EARLY DEVELOPMENT IN TUNICATES 246

Tunicate Cleavage 246

The tunicate fate map 246

Autonomous and conditional specification of tunicate blastomeres 247

Specification of the embryonic axes 249

Gastrulation in Tunicates 250

**EARLY DEVELOPMENT OF THE NEMATODE
CAENORHABDITIS ELEGANS 251**

Why *C. elegans*? 251

Cleavage and Axis Formation in *C. elegans* 251

*Rotational cleavage of the *C. elegans* egg* 251

Anterior-posterior axis formation 253

Formation of the dorsal-ventral and right-left axes 253

Control of blastomere identity 254

*Integration of autonomous and conditional specification:
The differentiation of the *C. elegans* pharynx* 257

Gastrulation in *C. elegans* 257

Coda 258

CHAPTER 9 The genetics of axis specification in *Drosophila* 263

EARLY DROSOPHILA DEVELOPMENT 263

Cleavage 264

The mid-blastula transition 265

Gastrulation 266

THE ORIGINS OF ANTERIOR-POSTERIOR POLARITY 268

The Maternal Effect Genes 270

Embryological evidence of polarity regulation by oocyte cytoplasm 270

The molecular model: Protein gradients in the early embryo 270

The anterior organizing center: The Bicoid gradient 273

The posterior organizing center: Localizing and activating nanos 276

The terminal gene group 277

The Segmentation Genes 278

The gap genes 279

The pair-rule genes 281

The segment polarity genes 283

The Homeotic Selector Genes 285

Patterns of homeotic gene expression 285

Initiating the patterns of homeotic gene expression 286

Maintaining the patterns of homeotic gene expression 288

Realisator genes 288

■ **Sidelights & Speculations:** *The Homeodomain Proteins* 289

THE GENERATION OF DORSAL-VENTRAL POLARITY 290

Dorsal: The Morphogenetic Agent for Dorsal-Ventral Polarity 291

Translocation of Dorsal to the nucleus 291

The signal cascade 293

Establishing the dorsal patterning gradient 294

Axes and Organ Primordia: The Cartesian Coordinate Model 297

Coda 297

CHAPTER 10 Early development and axis formation in amphibians 305

EARLY AMPHIBIAN DEVELOPMENT 305

Cleavage in Amphibians 305

Amphibian Gastrulation 307

*The *Xenopus* fate map* 308

Cell movements during amphibian gastrulation 309

The mid-blastula transition: Preparing for gastrulation 310

Positioning the blastopore 311

Invagination and involution 312

The convergent extension of the dorsal mesoderm 313

Migration of the involuting mesoderm 315

Epiboly of the ectoderm 315

■ **Sidelights & Speculations:** *Fibronectin and the Pathways for Mesodermal Migration* 316

AXIS FORMATION IN AMPHIBIANS: THE PHENOMENON OF THE ORGANIZER 317

The Progressive Determination of the Amphibian Axes 317

Hans Spemann and Hilde Mangold: Primary Embryonic Induction 320

Mechanisms of Axis Determination in Amphibians 321

The origin of the Nieuwkoop center 321

The molecular biology of the Nieuwkoop center 322

The Functions of the Organizer 325

The diffusible proteins of the organizer I: The BMP inhibitors 327

The diffusible proteins of the organizer II: The Wnt inhibitors 330

■ **Sidelights & Speculations:** *BMP4 and Geoffroy's Lobster* 330

Conversion of the ectoderm into neural plate cells 332

■ **Sidelights & Speculations:** *Competence, Bias, and Neurulation* 333

The Regional Specificity of Induction 334

The determination of regional differences 334

The posterior transforming proteins: Wnt signals and retinoic acid 334

The anterior transforming proteins: Insulin-like growth factors 336

Specifying the Left-Right Axis 337

CHAPTER 11 The early development of vertebrates: Fish, birds, and mammals 345

EARLY DEVELOPMENT IN FISH 345

Cleavage in Fish Eggs 347

Gastrulation in Fish Embryos 349

The formation of germ layers 349

Axis Formation in Fish Embryos 351

Dorsal-ventral axis formation: The embryonic shield 351

The fish Nieuwkoop center 352

Anterior-posterior patterning 353

EARLY DEVELOPMENT IN BIRDS 354

Cleavage in Bird Eggs 354

Gastrulation of the Avian Embryo 356

The hypoblast 356

The primitive streak 356

Epiboly of the ectoderm 358

Axis Formation in the Chick Embryo 360

The role of pH in forming the dorsal-ventral axis 360

The role of gravity in forming the anterior-posterior axis 360

Left-Right Axis Formation 363

EARLY MAMMALIAN DEVELOPMENT 363

Cleavage in Mammals 363

The unique nature of mammalian cleavage 364

Compaction 366

Escape from the zona pellucida 368

Gastrulation in Mammals 368

Modifications for development within another organism 368

Formation of extraembryonic membranes 370

■ **Sidelights & Speculations: Twins and Embryonic Stem Cells** 373

Mammalian Anterior-Posterior Axis Formation 375

Two signaling centers 375

Patterning the anterior-posterior axis: The Hox code hypothesis 377

Expression of Hox genes along the dorsal axis 377

Experimental analysis of the Hox code 377

The Dorsal-Ventral and Right-Left Axes in Mice 380

The dorsal-ventral axis 380

The left-right axis 381

p a r t **3** *Later embryonic development*

CHAPTER 12 The emergence of the ectoderm: The central nervous system and the epidermis 389

Establishing the Neural Cells 391

Formation of the Neural Tube 393

Primary neurulation 393

Secondary neurulation 398

Differentiation of the Neural Tube 398

The anterior-posterior axis 398

The dorsal-ventral axis 401

Tissue Architecture of the Central Nervous System 402

Spinal cord and medulla organization 403

Cerebellar organization 404

Cerebral organization 405

■ **Sidelights & Speculations: The Unique Development of the Human Brain** 408

Adult neural stem cells 409

Differentiation of Neurons 410

Development of the Vertebrate Eye 413

The dynamics of optic development 413

Neural retina differentiation 414

Lens and cornea differentiation 414

The Epidermis and the Origin of Cutaneous Structures 416

The origin of epidermal cells 416

Cutaneous appendages 418

Developmental genetics of hair formation 419

CHAPTER 13 Neural crest cells and axonal specificity 427

THE NEURAL CREST 427

Specification and Regionalization of the Neural Crest 427

The Trunk Neural Crest 429

Migration pathways of trunk neural crest cells 429

The mechanisms of trunk neural crest migration 431

Trunk neural crest cell differentiation 432

The Cranial Neural Crest 434

Cranial neural crest cell migration and specification: The first wave 436

Intramembranous ossification 437

Innervation of the placodes: The second wave of cranial neural crest migration 438

■ **Sidelights & Speculations: Tooth Development** 439

The Cardiac Neural Crest 441

NEURONAL SPECIFICATION AND AXONAL SPECIFICITY 442

- The Generation of Neuronal Diversity 442
- Pattern Generation in the Nervous System 444
 - Cell adhesion and contact guidance by attractive and permissive molecules 445
 - Guidance by specific growth cone repulsion 445
 - Guidance by diffusible molecules 446
 - Target selection 450
 - Forming the synapse: Activity-dependent development 451
 - Differential survival after innervation:
 - Neurotrophic factors 451
 - Paths to glory: Migration of the retinal ganglion axons 453
- The Development of Behaviors: Constancy and Plasticity 457

CHAPTER 14 Paraxial and intermediate mesoderm 465

PARAXIAL MESODERM: THE SOMITES AND THEIR DERIVATIVES 466

- The Formation of Somites 467
 - The periodicity of somite formation 467
 - The separation of somites from the unsegmented mesoderm 468
 - The epithelialization of the somite 469
 - Specification of the somite along the anterior-posterior axis 471
 - The derivatives of the somite 471
 - Determination of the sclerotome and dermatome 472
 - Determination of the myotome 473
- Myogenesis: The Development of Muscle 473
 - Specification and differentiation by the myogenic bHLH proteins 473
 - Muscle cell fusion 474
- Osteogenesis: The Development of Bones 474
 - Endochondral ossification 475
 - Osteoclasts 477

INTERMEDIATE MESODERM: THE UROGENITAL SYSTEM 477

- The Specification of the Intermediate Mesoderm 478
- Progression of Kidney Types 479
- Reciprocal Interactions of Developing Kidney Tissues 480
 - The mechanisms of reciprocal induction 481

CHAPTER 15 Lateral plate mesoderm and endoderm 491

LATERAL PLATE MESODERM 491

- The Heart 492
 - Specification of heart tissue and fusion of heart rudiments 492
- **Sidelights & Speculations: Redirecting Blood Flow in the Newborn Mammal 498**
- Formation of Blood Vessels 500
 - Constraints on the construction of blood vessels 500
 - Vasculogenesis: The initial formation of blood vessels 501
 - Angiogenesis: Sprouting of blood vessels and remodeling of vascular beds 503
- Mechanisms of Arterial and Venous Differentiation 504
- The Development of Blood Cells 505
 - The stem cell concept 505
 - Sites of hematopoiesis 506
 - Committed stem cells and their fates 509
 - Hematopoietic inductive microenvironments 509

ENDODERM 510

- The Pharynx 511
- The Digestive Tube and Its Derivatives 511
 - Specification of the gut tissue 512
 - Liver, pancreas, and gallbladder 512
- **Sidelights & Speculations: Blood and Guts: The Specification of Liver and Pancreas 513**
- The Respiratory Tube 515
- The Extraembryonic Membranes 517
 - The amnion and chorion 517
 - The allantois and yolk sac 517

CHAPTER 16 Development of the tetrapod limb 523

- Formation of the Limb Bud 524
 - Specification of the limb fields: Hox genes and retinoic acid 524
 - Induction of the early limb bud: Wnt proteins and fibroblast growth factors 525
 - Specification of forelimb or hindlimb: Tbx4 and Tbx5 526
- Generating the Proximal-Distal Axis of the Limb 529
 - The apical ectodermal ridge 529
 - FGFs in the induction and maintenance of the AER 530
 - Specifying the limb mesoderm: Determining the proximal-distal polarity of the limb 531
 - Hox genes, meis genes, and the specification of the proximal-distal axis 532

- Specification of the Anterior-Posterior Limb Axis 534
The zone of polarizing activity 534
Sonic hedgehog defines the ZPA 535
Specification of the ZPA 535
Specifying digit identity through cell interactions initiated by Sonic hedgehog 536
- Generation of the Dorsal-Ventral Axis 537
- Coordinating the Three Axes 537
- Cell Death and the Formation of Digits and Joints 538
Sculpting the autopod 538
Forming the joints 539
- Continued Limb Growth: Epiphyseal Plates 540
- **Sidelights & Speculations:** Control of Cartilage Maturation at the Growth Plate 541

CHAPTER 17 Sex determination 547

CHROMOSOMAL SEX DETERMINATION IN MAMMALS 548

- Primary and Secondary Sex Determination in Mammals 548
- The Developing Gonads 549
- The Mechanisms of Mammalian Primary Sex Determination 551
SRY: The Y chromosome sex determinant 551
SOX9: An autosomal testis-determining gene 552
Fibroblast growth factor 9 553
SF1: The link between SRY and the male developmental pathways 554
DAX1: A potential testis-suppressing gene on the X chromosome 554
WNT4: A potential ovary-determining gene on an autosome 556
- Secondary Sex Determination: Hormonal Regulation of the Sexual Phenotype 556
Testosterone and dihydrotestosterone 557
Anti-Müllerian duct hormone 558
Estrogen 559
- **Sidelights & Speculations:** Sex Determination and Behaviors 559

CHROMOSOMAL SEX DETERMINATION IN DROSOPHILA 561

- The Sexual Development Pathway 561
- Mechanisms of Sex Determination 562
The sex-lethal gene as the pivot for sex determination 562
The transformer genes 563
Doublesex: The switch gene of sex determination 564

ENVIRONMENTAL SEX DETERMINATION 567

- Temperature-Dependent Sex Determination in Reptiles 567
Aromatase and the production of estrogens 567
Sex reversal, aromatase, and conservation biology 568
- Location-Dependent Sex Determination in *Bonellia* and *Crepidula* 568

CHAPTER 18 Metamorphosis, regeneration, and aging 575

- Metamorphosis: The Hormonal Reactivation of Development 575
- Amphibian Metamorphosis 576
Morphological changes associated with metamorphosis 576
Biochemical changes associated with metamorphosis 577
Hormonal control of amphibian metamorphosis 578
Regionally specific developmental programs 580
- **Sidelights & Speculations:** Variations on the Theme of Amphibian Metamorphosis 581
- Metamorphosis in Insects 583
Types of insect metamorphosis 583
Imaginal discs 584
Determination of the wing imaginal discs 587
Hormonal control of insect metamorphosis 588
The molecular biology of 20-hydroxyecdysone activity 590
- Regeneration 592
- Epimorphic Regeneration of Salamander Limbs 592
Formation of the apical ectodermal cap and regeneration blastema 593
Proliferation of the blastema cells: The requirement for nerves 594
Proliferation of the blastema cells: The requirement for FGF10 595
Pattern formation in the regeneration blastema 595
- Morphallactic Regeneration in Hydra 597
The head activation gradient 597
The head inhibition gradient 598
The hypostome as an "organizer" 598
The basal disc activation and inhibition gradients 600
- Compensatory Regeneration in the Mammalian Liver 601
- Aging: The Biology of Senescence 601
Maximum life span and life expectancy 601
Causes of aging 602
Genetically programmed aging 603

CHAPTER 19 *The saga of the germ line* 613

Germ Plasm and the Determination of the Primordial Germ Cells 613

- Germ cell determination in nematodes* 614
- Germ cell determination in insects* 615
- Germ cell determination in amphibians* 616
- The inert genome hypothesis* 617

Germ Cell Migration 617

- Germ cell migration in amphibians* 617
- Germ cell formation and migration in mammals* 618

■ *Sidelights & Speculations: EG Cells, ES Cells, and Teratocarcinomas* 621

- Germ cell migration in birds and reptiles* 622

Germ cell migration in Drosophila 622

Meiosis 624

■ *Sidelights & Speculations: Big Decisions: Mitosis or Meiosis? Sperm or Egg?* 627

Spermatogenesis 628

- Forming the haploid spermatid* 628
- Spermiogenesis: The differentiation of the sperm* 630

Oogenesis 631

- Oogenic meiosis* 631
- Maturation of the oocyte in amphibians* 632
- Completion of amphibian meiosis: Progesterone and fertilization* 633
- Gene transcription in oocytes* 634
- Meroistic oogenesis in insects* 637
- Maturation of the mammalian oocyte* 638

part 4 *Ramifications of developmental biology*

CHAPTER 20 *An overview of plant development* 649

Plant Life Cycles 651

Gamete Production in Angiosperms 654

- Pollen* 654
- The ovary* 655
- Pollination* 655

Fertilization 658

Embryonic Development 659

- Experimental studies* 659
- Embryogenesis* 659

Dormancy 664

Germination 664

Vegetative Growth 665

- Meristems* 665
- Root development* 667
- Shoot development* 667
- Leaf development* 668

The Vegetative-to-Reproductive Transition 671

- Control of the reproductive transition* 672
- Inflorescence meristems* 674
- Floral meristem identity genes* 675
- Organ identity genes: The ABC model* 676

Senescence 678

CHAPTER 21 *Medical implications of developmental biology* 683

INFERTILITY 683

Diagnosing Infertility 683

In Vitro Fertilization (IVF) 684

- The IVF procedure* 684
- Variations on IVF* 685
- Success rates and complications of IVF* 685

■ *Sidelights & Speculations: Ethical Issues and Assisted Reproductive Technology* 686

GENETIC ERRORS OF HUMAN DEVELOPMENT 686

Identifying the Genes for Human Developmental Anomalies 687

The Nature of Human Syndromes 689

- Pleiotropy* 689
- Genetic heterogeneity* 690
- Phenotypic variability* 690
- Mechanisms of dominance* 691

Gene Expression and Human Disease 691

- Inborn errors in transcriptional regulation* 691
- Inborn errors of nuclear RNA processing* 692
- Inborn errors of translation* 692

Preimplantation Genetics 693

Amniocentesis, chorionic villus sampling, and preimplantation genetics 693

Sperm separation and sex selection 694

TERATOGENESIS: ENVIRONMENTAL ASSAULTS ON HUMAN DEVELOPMENT 694

Teratogenic Agents 695

Retinoic acid as a teratogen 696

Alcohol as a teratogen 697

Endocrine disruptors 698

Other teratogenic agents 700

■ **Sidelights & Speculations:** *The DES Story: Is It Happening Again?* 701

DEVELOPMENTAL BIOLOGY AND THE FUTURE OF MEDICINE 703

Developmental Cancer Therapies 703

Cancer as a disease of altered development 703

Differentiation therapy 703

Angiogenesis inhibition 704

Gene Therapy 705

Somatic cell gene therapy 707

Germ line gene therapy 707

Stem Cells and Therapeutic Cloning 708

Cloning 708

Embryonic stem cells and therapeutic cloning 708

Adult stem cells 709

Transgenic stem cells 711

Regeneration therapy 712

CHAPTER 22 Environmental regulation of animal development 721

The Environment as Part of Normal Development 721

Gravity and pressure 722

Developmental symbiosis 722

Larval settlement 725

Sex in its season 726

Diapause: Suspended development 727

Phenotypic Plasticity: Control of Development by Environmental Conditions 727

Polyphenism and reaction norms 727

Seasonal polyphenism in butterflies 728

Nutritional polyphenism 730

Environment-dependent sex determination 731

Polyphenisms for alternative environmental conditions 732

■ **Sidelights & Speculations:** *Genetic Assimilation* 733

Predator-induced polyphenisms 734

■ **Sidelights & Speculations:** *Mammalian Immunity as a Predator-Induced Response* 736

Learning: An Environmentally Adaptive Nervous System 737

The formation of new neurons 737

Experiential changes in mammalian visual pathways 737

Endocrine Disruptors 739

Environmental estrogens 740

Environmental thyroid hormone disruptors 742

Chains of causation 742

Developmental Biology Meets the Real World 743

■ **Sidelights & Speculations:** *Deformed Frogs* 744

CHAPTER 23 Developmental mechanisms of evolutionary change 751

“Unity of Type” and “Conditions of Existence” 751

Charles Darwin’s synthesis 751

“Life’s splendid drama” 752

The search for the Urbilaterian ancestor 753

Hox Genes: Descent with Modification 754

■ **Sidelights & Speculations:** *How the Chordates Got a Head* 761

Homologous Pathways of Development 763

Instructions for forming the central nervous system 763

Instructions for appendage formation 764

Modularity: The Prerequisite for Evolution through Development 766

Dissociation: Heterochrony and allometry 766

Duplication and divergence 768

Co-option 768

Generating Evolutionary Novelty 769

Developmental Constraints 773

Physical constraints 773

Morphogenetic constraints 774

Phyletic constraints 774

■ **Sidelights & Speculations:** *Canalization and the Release of Developmental Constraints* 776

A New Evolutionary Synthesis 777
