PREFACE	9
LIST OF SYMBOLS	13
1 MULTIVARIATE UNIVERSAL LINEAR STATISTICAL MODELS WITHOUT CONSTRAINTS	15
1 BLUEs of the unbiasedly estimable functions of the matrix $\mathbf{B}$ . . . . .	15
2 Estimation of the parameter $\sigma^2$ and the variance components $\vartheta_1, \dots, \vartheta_p$	23
3 Estimation of the matrix $\Sigma$ . . . . .	26
4 Confidence regions (normality is assumed) . . . . .	27
4.1 The matrix $\Sigma$ is given . . . . .	27
4.2 The matrix $\Sigma$ is of the form $\sigma^2 \mathbf{V}$ . . . . .	30
4.3 The matrix $\Sigma$ is of the form $\sum_{i=1}^p \vartheta_i \mathbf{V}_i$ . . . . .	31
4.4 The matrix $\Sigma$ is completely unknown . . . . .	42
5 Testing statistical hypotheses (under normality) . . . . .	50
5.1 The matrix $\Sigma$ is given . . . . .	50
5.2 The matrix $\Sigma$ is of the form $\sigma^2 \mathbf{V}$ . . . . .	51
5.3 The matrix $\Sigma$ is of the form $\sum_{i=1}^p \vartheta_i \mathbf{V}_i$ . . . . .	53
5.4 The matrix $\Sigma$ is completely unknown . . . . .	67
2 MULTIVARIATE UNIVERSAL LINEAR STATISTICAL MODELS WITH THE TYPE I CONSTRAINTS	71
1 Estimation of functions of the matrix $\mathbf{B}$ . . . . .	71
2 Estimation of the parameter $\sigma^2$ and the variance components $\vartheta_1, \dots, \vartheta_p$	87
3 Estimation of the matrix $\Sigma$ . . . . .	97
4 Confidence regions (normality is assumed) . . . . .	98
4.1 The matrix $\Sigma$ is given . . . . .	98
4.2 The matrix $\Sigma$ is of the form $\sigma^2 \mathbf{V}$ . . . . .	103
4.3 The matrix $\Sigma$ is of the form $\sum_{i=1}^p \vartheta_i \mathbf{V}_i$ . . . . .	103
4.4 The matrix $\Sigma$ is completely unknown . . . . .	112
5 Testing linear hypotheses (under normality) . . . . .	124
5.1 The matrix $\Sigma$ is given . . . . .	125
5.2 The matrix $\Sigma$ is of the form $\sigma^2 \mathbf{V}$ . . . . .	127
5.3 The matrix $\Sigma$ is of the form $\sum_{i=1}^p \vartheta_i \mathbf{V}_i$ . . . . .	127
5.4 The matrix $\Sigma$ is completely unknown . . . . .	135
3 MULTIVARIATE UNIVERSAL LINEAR STATISTICAL MODELS WITH THE TYPE II CONSTRAINTS	145
1 Estimation of functions of the matrices $\mathbf{B}_1$ and $\mathbf{B}_2$ . . . . .	145
2 Estimation of the parameter $\sigma^2$ and the variance components $\vartheta_1, \dots, \vartheta_p$	168
3 Estimation of the matrix $\Sigma$ . . . . .	176
4 Confidence regions (normality is assumed) . . . . .	177
4.1 The matrix $\Sigma$ is given . . . . .	177
4.2 The matrix $\Sigma$ is of the form $\sigma^2 \mathbf{V}$ . . . . .	188

4.3 The matrix  $\Sigma$  is of the form  $\sum_{i=1}^p \vartheta_i \mathbf{V}_i$  . . . . . 188  
 4.4 The matrix  $\Sigma$  is completely unknown . . . . . 199  
 5 Testing linear hypotheses (normality is assumed) . . . . . 224

APPENDIX . . . . . 237  
 A.1 Definitions and statements from algebra . . . . . 237  
 A.2 Statements from probability theory and mathematical statistics . . . . . 239

BIBLIOGRAPHY . . . . . 245
