List of contributors	xv
About the editors	xix
Preface	xxi
Introduction	xxiii
1. Electrochemistry: general aspects	
Laura Scarpetta-Pizo, Ingrid Ponce and José H. Zagal	
1.1 Introduction to electrochemistry and organic electrochemistry	1
1.2 Brief introduction to electrode kinetics	2
References	18
2. Electrochemical processes of organic compounds	19
Antonio Doménech-Carbó	
2.1 Introduction	19
2.2 Electrochemical processes in organic chemistry	20
2.3 Operation modes in electrosynthesis	26
2.4 Electrochemically driven organic reactions	31
2.5 Photoelectrochemistry	37
2.6 Other issues	40
2.7 Concluding remarks	41
References	41
Spot for Chapter 2	
Electrochemical deuteration of organic compounds	
Antonio Doménech-Carbó	
References	50
3. One- and multielectron transfers complicated by coupled molecular catalytic reactions	
Eduardo Laborda, Joaquín González and Ángela Molina	
3.1 Voltammetric and voltacoulometric assessment of the catalyst	51
3.2 One-electron catalysis	59
3.3 Multielectron catalysis	70
References	84

4. Electrochemistry of hydrocarbons	
Sofia Capelo and Antonio Doménech-Carbó	
4.1 Introduction	87
4.2 Overview	88
4.3 Oxidation processes	92
4.4 Reduction processes	98
4.5 Concluding remarks	101
References	102
5. Electrochemistry of oxygen-containing compounds	
Sofia Capelo and Antonio Doménech-Carbó	
5.1 Introduction	105
5.2 Quinones and hydroquinones	106
5.3 Oxidation processes	110
5.4 Reduction processes	115
5.5 Electrochemistry of polyphenols	117
5.6 Concluding remarks	121
References	121
Spot for Chapter 5	
Electrochemistry of dyes and pigments	
Rafaela Vendramin Comunello, Eliézer Quadro Oreste and Daiane Dias	
References	129
6. Electrochemistry of nitrogen-containing compounds	
Lenon Medina Ferreira, Ana Paula de Oliveira Lopes Antunes, Ana Maria Munaretto Durigon, Gabriel Pereira da Costa, Eliézer Quadro Oreste and Daiane Dias	
6.1 Introduction	131
6.2 Synthesis/conversion electrochemistry of <i>N</i> -compounds	133
6.3 Prevailing challenges and future perspectives	148
References	149
7. Modern electrochemistry of heterocyclic compounds	
Sadia Rani, Samina Aslam and Nisar Ahmed	
7.1 Introduction	155
7.2 Different approaches to electro-organic heterocycle synthesis	158
7.3 Electrosynthesis of heterocycles	165
7.4 Conclusion and future perspectives	171
References	172

8. Electrochemistry of aliphatic heteroatom-containing compounds	
Antonio Doménech-Carbó	
8.1 Introduction	177
8.2 Aliphatic nitrogen compounds	177
8.3 Sulfur and selenium compounds	182
8.4 Halogenated compounds	183
8.5 Phosphorus compounds	186
8.6 Boron compounds	190
8.7 Silicon compounds	192
8.8 Concluding remarks	192
References	192
9. Electrochemistry applied to determine petroleum asphalts composition and aging process associated with organosulfur compounds	
Géssica Domingos da Silveira	
9.1 Introduction	199
9.2 Solid-state electrochemistry of sulfur compounds	200
9.3 Electrochemistry of polymeric forms	204
9.4 Archaeological asphalts	206
9.5 Solution-phase electrochemistry	208
References	211
10. Electrochemistry of DNA, proteins, and carbohydrates	
Veronika Ostatna and Miroslav Fojta	
10.1 Electrochemistry of proteins	214
10.2 Electrochemistry of DNA	217
10.3 Electrochemistry of carbohydrates	223
References	226
Spot for Chapter 10	
Electrochemical screening of bioactive natural products and extracts	
Gerardo Cebrián-Torrejón	
10.1.1 Direct screening of bioactive compounds	232
10.1.2 Study of compound/target interaction	234
10.1.3 Identification of natural products (NPS)	234
10.1.4 Study of the mechanism of action	235
References	236

11. Paired organic electrosynthesis: sustainability and electrode design Tingran Liu, Taku Suzuki-Osborne, James E. Taylor and Frank Marken	
11.1 Introduction: sustainability considerations in electrosynthesis	239
11.2 Reactor design for sustainable electrosynthesis	241
11.3 Examples of reaction and process design for sustainable electrosynthesis	246
11.4 Conclusion and outlook	253
Acknowledgments	255
References	255
12. Development of electrosynthesis–organocatalysis strategies for innovative enantioselective electrochemical processes César Augusto Correia de Sequeira	
12.1 Introduction	261
12.2 Development of electrooxidation/multicomponent process sequences	265
12.3 Asymmetric electro-organocatalysis	270
12.4 Electrooxidation of amines, thioethers, and ethers	271
12.5 Intra- and intermolecular anodic electro-organocatalysis	278
12.6 Cathodic electro-organocatalysis	282
12.7 Mechanistic studies	285
12.8 Conclusions	287
References	289
13. Mediated convergent paired organic electrosynthesis César Augusto Correia de Sequeira	
13.1 Introduction	295
13.2 Mediated electrolysis	299
13.3 Conclusions and perspectives	311
References	312
14. Tandem electrocatalysts for CO ₂ electroreduction: focus on ethylene production Pedro P. Jofré-Ulloa, Elías Mardones-Herrera, Jessica Honores and Mauricio Isaacs	
14.1 What is tandem electrocatalysis?	315
14.2 Tandem electrocatalysis of carbon dioxide (CO ₂)	316
14.3 Cascade mechanism for CO ₂ reduction	317
14.4 Electrochemical reduction of CO ₂ to ethylene in tandem regime	319
14.5 Copper-silver tandem electrocatalysis to ethylene	321
14.6 Copper–gold tandem electrocatalysis to ethylene	326
14.7 Copper-zinc tandem electrocatalysis to ethylene	330
14.8 Challenges and future directions	333
Acknowledge	335
References	336

15. Electropolymerization

Francesca Di Turo and Antonio Doménech-Carbó

15.1	Introduction	339
15.2	Fundamental principles of electropolymerization	341
15.3	Mechanistic aspects	343
15.4	Electrochemical techniques for polymerization: galvanostatic, potentiostatic, and potentiodynamic techniques	346
15.5	Components for electropolymerization	347
15.6	Applications	353
15.7	Conclusions	359
	References	359

Spot for Chapter 15

Electrochemical analysis of catalytic processes in organic chemistry

Antonio Doménech-Carbó

References	367
------------	-----

16. Electrochemistry of ionic liquids

Ke Qu and Jinghong Li

16.1	Electrochemistry of ionic liquids	369
16.2	Classification and properties of ionic liquids	371
16.3	Energy application of ionic liquids	373
16.4	Electro-catalytic application of ionic liquids	379
16.5	Ionic liquids for sensors	383
16.6	Summary and outlook	385
	References	386

Spot for Chapter 16

Applications of deep eutectic solvents in organic electroanalysis

Orlando Fatibello-Filho, Tiago Almeida Silva and Evandro Piccin

16.1.1	Introduction	393
16.1.2	Electrochemical features of deep eutectic solvent	394
16.1.3	Organic electroanalysis based on deep eutectic solvent-electrochemical sensors	394
16.1.4	Conclusion and perspectives	398
	Acknowledgments	398
	References	398

17. Supramolecular electrochemistry

Antonio Doménech-Carbó

17.1	Introduction	401
------	--------------	-----

17.2	Thermochemical aspects	402
17.3	Potentiometric access to multiple equilibria	404
17.4	Voltammetric analysis of adduct formation equilibria	407
17.5	Competitive methods	411
17.6	Electrochemistry and host–guest interactions	412
17.7	Reaction pathways and structural issues	416
17.8	Solid-state electrochemistry of supramolecular systems	419
17.9	Applications	422
17.10	Concluding remarks	422
	References	423
Spot for Chapter 17		
Molecular machinery		
Antonio Doménech-Carbó		
	References	432
18. Theoretical aspects of electron-transfer processes mediated by metal macrocyclic molecules		
Karina Muñoz-Becerra, Ricardo Venegas, Kerry Wrighton-Araneda, F. Javier Recio and José H. Zagal		
18.1	Introduction	433
18.2	Theoretical aspects of out-sphere electron transfer	437
18.3	DFT guidelines for the study of MN_4 systems in electron-transfer processes	449
18.4	Summary	454
	References	455
19. Electrochemistry of solid-state organic compounds		
Heike Kahlert		
19.1	Introduction	465
19.2	From carbon paste to immobilized particles	466
19.3	Electrodes, electrolytes, cells, methods	468
19.4	General aspects	469
19.5	Reductive/oxidative dissolution processes	471
19.6	Ion-insertion electrochemistry	471
19.7	Applications	473
	References	477
Spot for Chapter 19		
Solid-state electrochemistry of parchment and paper		
Francesca Di Turo		
19.1.1	Introduction	481

19.1.2	Parchment: state of the art and future perspectives	482
19.1.3	Paper	485
	References	486
20.	Electrochemistry of living systems	
	Antonio Doménech-Carbó	
20.1	Introduction	491
20.2	In situ and in vivo electrochemistry	492
20.3	Electrochemistry of cell suspensions	498
20.4	Single-cell electrochemistry	501
20.5	Other approaches	505
20.6	Concluding remarks	506
	References	506
Spot for Chapter 20		
Electrochemical diagnosis		
Antonio Doménech-Carbó, Clara Doménech-Casasús, José Luís Pontones and David Ramos		
	References	515
21.	Electrochemistry of covalent organic frameworks	
	Antonio Doménech-Carbó	
21.1	Introduction	519
21.2	Electrochemical processes	520
21.3	Electrochemical sensing	524
21.4	Electrocatalysis	525
21.5	Energy storage	530
21.6	Final considerations	538
	References	538
Spot for Chapter 21		
Metal-organic frameworks		
Antonio Doménech-Carbó		
	References	547
22.	Electrochemistry of organic–inorganic hybrid materials	
	Antonio Doménech-Carbó	
22.1	Introduction	549
22.2	Experimental aspects	551
22.3	Electrochemistry of aluminosilicate-based hybrid materials	551

22.4	Thermochemical aspects	559
22.5	Electrocatalysis	560
22.6	Organic polymer hybrids	565
22.7	Layered double hydroxides	565
22.8	Organoclays	566
22.9	Recent developments and applications	568
	References	569
	Spot for Chapter 22	
	The Maya blue puzzle	
	Antonio Doménech-Carbó	
	References	576
23	Bipolar organic electrochemistry	
	Serena Arnaboldi, Sara Grecchi, Gerardo Salinas and Alexander Kuhn	
23.1	Introduction	579
23.2	Bipolar electroorganic synthesis	586
23.3	Conclusion and perspectives	601
	Acknowledgments	603
	References	603
24	Electroanalysis of organic compounds	
	Guzel Ziyatdinova	
24.1	Introduction	611
24.2	Potentiometric analysis of organic compounds	612
24.3	Voltammetric analysis of organic compounds	616
24.4	Conclusions	629
	References	629
25	Nanotechnology-based pharmaceutical electroanalysis: from traditional electrodes to nanotechnology-based platforms	
	A. Álvarez-Lueje and J.A. Squella	
25.1	Evolution of electrochemical techniques in pharmaceutical analysis	637
25.2	Traditional electrochemical techniques in pharmaceutical analysis	638
25.3	Modern electrodes and nanomaterial-based platforms	641
25.4	Future directions: integrating nanotechnology with electrochemical methods	643
25.5	Future directions: integrating nanotechnology with electrochemical methods	645
	Acknowledgment	650
	References	650

Spot for Chapter 25**Understanding the electrochemistry of fentanyl:
mechanisms and detection**

Ana Paula de Oliveira Lopes Antunes and Daiane Dias

References 662

26. Miniaturized electrochemical devices: from lab to field

Ana Rita Queijo, Katarzyna Styszko and Rosa Rego

26.1	Introduction	665
26.2	Miniaturized electrochemical sensors	667
26.3	Commercial portable potentiostats	671
26.4	Developed miniaturized potentiostats	673
26.5	Future prospects	682
	Acknowledgments	683
	References	683

27. ROS in organic electrochemistry

Antonio Doménech-Carbó

27.1	Introduction	691
27.2	Chemical and biochemical properties of ROS	691
27.3	Electrochemical ROS generation	693
27.4	Electrochemical detection and monitoring the reactivity of organic compounds with ROS	697
27.5	ROS in organic electrosynthesis	700
27.6	Reactive nitrogen species and others	706
27.7	Electrochemical pollutant degradation	709
27.8	Concluding remarks	710
	References	710

Spot for Chapter 27**Voltammetry of microparticles for in situ monitoring
of the activation of anthocyanins with ROS**

Irene Domínguez and Antonio Doménech-Carbó

27.1.1	Introduction	715
27.1.2	Voltammetric pattern of anthocyanins	716
27.1.3	Future perspectives	719
	References	719

28. Modern electrochemical processes and systems to degrade organic contaminants in water

Ignasi Sirés and Enric Brillas

28.1	Introduction	721
28.2	Advanced oxidation processes for water regeneration	722
28.3	Electrified membranes	726
28.4	Use of nanocatalysts in electro-Fenton process	731
28.5	Use of packed-bed electrodes	736
28.6	Combined processes	737
28.7	Conclusions	742
	Acknowledgments	742
	References	742

Spot for Chapter 28

Realizing utopian sustainability

Ignasi Sirés and Enric Brillas

Acknowledgments	751
References	751

29. Organic compounds in electrical energy production and storage

Antonio Doménech-Carbó

29.1	Introduction	753
29.2	Supercapacitors	754
29.3	Organic batteries	758
29.4	Organic fuel cells	761
29.5	Liquid organic hydrogen carriers	767
29.6	Concluding remarks	771
	References	771

Spot for Chapter 29

Organic solar cells and organic transistors

Antonio Doménech-Carbó

References	782
------------	-----
