	Preface of the Book Series	<i>xv</i>
	Preface of the First Volume	<i>xvi</i>
	Acknowledgements	<i>xvii</i>
1	Introduction	1
1.1	Modelling and Goal of Lens Design	2
1.2	Optical System Types and Aperture Field Classification	3
1.2.1	Selected Classes of Systems	7
	References	10
2	Optical Materials	13
2.1	Introduction	13
2.2	Dispersion	14
2.2.1	Definition	14
2.2.2	Wavelengths	15
2.2.3	Abbe Number	16
2.2.4	Dispersion of Crown and Flint Glasses	17
2.2.5	Glass Diagram	18
2.2.6	Interpolation of the Refractive Index	18
2.2.7	Relative Partial Dispersion	20
2.2.7.1	Definition	20
2.2.7.2	Line of Normal Dispersion	22
2.2.7.3	Anomalous Partial Dispersion	25
2.2.7.4	Hoogland Diagram	26
2.2.7.5	The Anomalous Dispersion Representation of Münz	26
2.2.8	Generalized Mathematical Descriptions of Dispersion	29
2.2.8.1	Introduction	29
2.2.8.2	Derivative Based Dispersion Description	31
2.2.8.3	Buchdahls Chromatical Coordinates	32
2.2.8.4	Adaptive Dispersion Formula of Sasian	33
2.2.9	Miscellaneous	35
2.2.9.1	Dispersion of Diffractive Surfaces	35
2.2.9.2	Dispersion of Gradient-Index Materials	36
2.3	Group Velocity Dispersion and Short Pulses	37
2.3.1	Introduction	37
2.3.2	Dispersion Coefficients	38
2.3.3	Pulse Changes due to Dispersion	38
2.3.4	Pulse Dispersion Data of Glasses	39
2.3.4.1	Introduction	39
2.3.4.2	Numerical Calculation of Index Derivatives	39
2.3.4.3	GVD Properties of Glasses	40
2.4	Absorption and Transmission	42
2.4.1	Complex Index of Refraction	42
2.4.2	Lambert-Beers Law	44
2.4.3	Transmission of a Component	44
2.4.4	Transmission of Glasses	45
2.5	Thermal Properties	46
2.5.1	Thermal Expansion	46
2.5.2	Index Change	47
2.5.3	Thermo-Optical Coefficient	48
2.5.3.1	Introduction	48
2.5.3.2	Temperature-Dependence of Dispersion	49
2.6	Other Optical Materials	49
2.6.1	Crystal Materials for IR and UV	49
2.6.2	Plastics	53
2.6.3	Water	54
2.6.4	Technical Liquids	54
2.6.5	Immersion Liquids	56
2.6.6	Optical Cements	57
	References	57
3	Geometrical Optics	61
3.1	Introduction	61
3.2	Law of Refraction	61
3.2.1	Introduction	61
3.2.2	Ray Bending	62
3.2.3	Description of Refraction in the k -Space	64
3.3	Fresnel Formulas	65
3.3.1	Amplitude Coefficients	65
3.3.2	Reflectivity and Transmittivity	67
3.3.3	Transmission of Systems	68
3.3.4	Total Internal Reflection	70
3.3.5	Reflection at Metals	73
3.4	Raytrace	74
3.4.1	Introduction	74
3.4.2	Paraxial Formulas	76
3.4.3	Meridional Q-U Method	77

- 3.4.4 Three-dimensional Case 78
- 3.4.5 Pitfalls and Special Cases 80
- 3.4.6 Modelling of Mirrors 81
- 3.4.7 Ray Intersection with Surfaces of Higher Order 82
- 3.4.8 Gradient Index Media 83
- 3.4.9 Differential Raytrace, Parabasal Rays and Ray Tubes 84
- 3.4.10 Diffractive Surfaces 86
 - 3.4.10.1 Introduction 86
 - 3.4.10.2 Plane Linear Gratings 87
 - 3.4.10.3 Generalized Diffractive Surfaces 88
- 3.4.11 Non-Sequential Raytrace 88
- 3.4.12 Special Ray Types 89
- 3.4.13 Ray Aiming 91
 - 3.4.13.1 Introduction 91
 - 3.4.13.2 Paraxial Aiming Approach 94
 - 3.4.13.3 Real Ray Aiming 95
 - 3.4.13.4 General Formulation of Greynolds 97
 - 3.4.13.5 Examples 97
- 3.4.14 Complex Rays 98
 - 3.4.14.1 Introduction 98
 - 3.4.14.2 Gaussian Beams with Complex Source Point 99
 - 3.4.14.3 Tracing Complex Rays 100
- 3.5 Paraxial Approximation 100
 - 3.5.1 Introduction 100
 - 3.5.2 Abbe Invariant 104
 - 3.5.2.1 Paraxial Definition 104
 - 3.5.2.2 Generalized Abbe Invariant 104
 - 3.5.3 Superposition of Rays 105
 - 3.5.4 Generalized Paraxiality 106
 - 3.5.5 Collinear Transform 106
- 3.6 Matrix Calculus 108
 - 3.6.1 Introduction 108
 - 3.6.2 Properties of the Matrices 109
 - 3.6.3 Matrices of Simple Components 111
 - 3.6.4 Decompositions of an *ABCD* Matrix 112
 - 3.6.4.1 Iwasawa Decomposition 112
 - 3.6.4.2 Alternative Decompositions 113
 - 3.6.5 Matrices for Generalized Geometries 114
 - 3.6.5.1 Two-dimensional 3×3 Matrices for Plane-Symmetric Systems 114
 - 3.6.5.2 Centered 4×4 Matrices 116
 - 3.6.5.3 Special 4×4 Matrices 117
 - 3.6.5.4 Decomposition of a 4×4 Matrix 118
 - 3.6.5.5 General 5×5 Matrices 119
- 3.7 Helmholtz–Lagrange Invariant 120
 - 3.7.1 Introduction 120
 - 3.7.2 Lagrange Invariant for Arbitrary z -Positions 122
 - 3.7.3 Generalized Etendue Definitions 122
 - 3.7.4 Smith’s Cosine Invariant 123
- 3.8 Delano Diagram 124
 - 3.8.1 Definition 124
 - 3.8.2 Properties of the Delano Diagram 125
 - 3.8.3 Vignetting 127
 - 3.8.4 Examples 127
- 3.9 Gaussian Brackets 129
 - 3.9.1 Introduction 129
 - 3.9.2 Alternative Representations 131
 - 3.9.3 Relation to *ABCD* Formalism 132
 - 3.9.4 Applications 132
 - 3.9.4.1 Tolerancing 132
 - 3.9.4.2 Achromatization 133
 - 3.9.4.3 Zoom Systems 133
 - References 133
- 4 Optical Components 137**
 - 4.1 Overview 137
 - 4.2 Single Refractive Spherical Surface 137
 - 4.3 Plane Plates 138
 - 4.3.1 Introduction 138
 - 4.3.2 Perpendicular Plates 139
 - 4.3.2.1 Beam Displacement 139
 - 4.3.2.2 Aberrations 140
 - 4.3.3 Tilted Plates 140
 - 4.3.4 Non-Orthogonal Prisms 141
 - 4.3.5 Plane-parallel Plate in a Convergent Beam 141
 - 4.4 Lenses 143
 - 4.4.1 Notations 143
 - 4.4.2 Focal Length 144
 - 4.4.3 Principal Planes and Surfaces 147
 - 4.4.4 Lens Shape and Bending 148
 - 4.4.5 Generalized Bending 151
 - 4.4.6 Modified Bending Definition 152
 - 4.4.7 Thick Lenses 153
 - 4.4.8 The Ideal Lens Dilemma 154
 - 4.5 Mirrors 157
 - 4.6 Aspheres 158
 - 4.6.1 Introduction 158
 - 4.6.2 Conic Surfaces 159
 - 4.6.2.1 Introduction 159
 - 4.6.2.2 Parabolic Mirrors 161
 - 4.6.2.3 Ellipsoidal Mirror 162
 - 4.6.2.4 Hyperboloidal Mirror 163
 - 4.6.2.5 Grazing Incidence Telescopes 163
 - 4.6.3 Cartesian Ovaloids 164
 - 4.6.3.1 Introduction 165
 - 4.6.3.2 Special Case Infinity 166
 - 4.6.3.3 Special Case Aplanatism 166
 - 4.6.4 Asphere with Polynomial Expansion 168
 - 4.6.4.1 Traditional Taylor Expansion 168
 - 4.6.4.2 Strong Forbes Aspheres 169
 - 4.6.4.3 Mild Forbes Aspheres 169

- 4.6.4.4 Superconical Surfaces 171
 - 4.7 Freeform Surfaces 171
 - 4.7.1 Introduction 171
 - 4.7.2 Basic Shape 174
 - 4.7.3 Boundary and Projection Factor 174
 - 4.7.4 Polynomial Functions 175
 - 4.7.4.1 Introduction 175
 - 4.7.4.2 Monomials 176
 - 4.7.4.3 Zernike Polynomials 177
 - 4.7.4.4 Chebyshev Polynomials 177
 - 4.7.4.5 Legendre Polynomials 177
 - 4.7.4.6 Forbes Freeform Surfaces 178
 - 4.7.5 Functional Systems with Local Support 178
 - 4.7.5.1 Introduction 178
 - 4.7.5.2 Radial Basis Functions 178
 - 4.7.5.3 Splines 182
 - 4.7.6 Technological Constraints and Manufacturability 184
 - 4.8 Special Component Types 185
 - 4.8.1 Cylindrical Lenses 185
 - 4.8.1.1 Introduction 185
 - 4.8.1.2 Aspherical Cylindrical Lenses 185
 - 4.8.1.3 Toroidal Lenses 187
 - 4.8.1.4 Toroidal Ring Lens 188
 - 4.8.1.5 Combinations of Cylindrical Lenses 188
 - 4.8.2 Fresnel Lenses 191
 - 4.8.2.1 Introduction 191
 - 4.8.2.2 Basic Equations 192
 - 4.8.2.3 Properties of Fresnel Lenses 193
 - 4.8.3 Axicons 194
 - 4.8.3.1 Geometrical Concept 194
 - 4.8.3.2 Physical Description 195
 - 4.8.4 Variable Components 195
 - 4.8.4.1 Introduction 195
 - 4.8.4.2 Electrowetting Liquid Lenses 196
 - 4.8.4.3 Electrophoretic Liquid Lenses 198
 - 4.8.4.4 Hydraulic Membrane Liquid Lenses 199
 - 4.8.4.5 Liquid Crystal Lenses 200
 - 4.8.4.6 Deformable Mirrors 200
 - 4.8.4.7 Alvarez Lenses 201
 - 4.8.5 Lenslet Arrays 202
 - 4.8.5.1 Introduction 202
 - 4.8.5.2 Special Lens Arrays 202
 - 4.8.5.3 Matrix Calculation of Arrays 203
 - 4.8.5.4 Applications 204
 - 4.8.6 Digital Mirror Device 206
 - 4.9 Gradient Index Lenses 209
 - 4.9.1 Introduction 209
 - 4.9.2 Quadratic Radial Index Lenses 210
 - 4.9.3 Axial Gradient Index Lenses 211
 - 4.9.4 Stigmatic Imaging Gradient Index-Lenses 211
 - 4.10 Prisms 214
 - 4.10.1 Reflecting Prisms 214
 - 4.10.2 Roof Prisms 215
 - 4.10.2.1 Description of the Geometry 215
 - 4.10.2.2 Dimensioning of the Size 216
 - 4.10.2.3 Image Formation Problems Related to Roof Edges 216
 - 4.10.3 Dispersion Prisms 217
 - 4.10.3.1 Introduction 217
 - 4.10.3.2 Achromatic Prism Pairs 218
 - 4.10.3.3 Anamorphic Prism Pair 219
 - 4.10.3.4 Fery Prisms 220
 - 4.10.4 Risley Prisms 220
 - 4.11 Diffractive Elements 222
 - 4.11.1 Linear Gratings 222
 - 4.11.1.1 Introduction 222
 - 4.11.1.2 Blazed Grating 223
 - 4.11.2 General Diffractive Elements 225
 - 4.11.2.1 Introduction 225
 - 4.11.2.2 Discretization and Quantization 229
 - 4.11.2.3 Types of DOE 230
 - 4.11.2.4 Fresnel Zone Plates 231
 - 4.11.2.5 Classical Diffractive Lens 231
 - 4.11.2.6 Decomposition into Orders or Zones 232
 - 4.11.2.7 Problems of Real Diffractive Elements 233
 - 4.11.3 Modelling DOEs by Raytrace 234
 - 4.12 Diffusor Plates 234
 - 4.12.1 Types of Diffusers 235
 - 4.12.2 Properties of Diffusers 235
 - 4.12.3 Angle Characteristic 237
