

CONTENTS

Preface	11
1. Chapter 1: The Birth of Synthetic Materials in Art	13
1.1. The Dawn of Synthetic Pigments.....	15
1.1.1. Synthetic pigments	15
1.1.2. Synthetic Dyes. Prussian blue	15
1.2. The Industrial Revolution and Chemical Advancements	18
1.2.1. Mauveine.....	18
1.2.2. Cobalt blue	21
1.2.3. Cadmium yellow	26
1.2.4. Chromium Oxide Green.....	29
References	31
2. Chapter 2: Polymers and Composite Materials: A New Era.	
Natural Polymers in Art	39
2.1. Proteins	42
2.1.1. Silk	42
2.1.2. Wool	53
2.1.3. Casein	58
2.1.4. Keratin.....	60
2.1.5. Gelatin	60
2.2. Cellulose	61

2.2.1. Paper and Pulp.....	63
2.2.2. Textiles	64
2.2.3. Wood	65
2.2.4. Examples of Artists Using Cellulose	67
2.3. Natural Rubber.....	67
2.3.1. Examples of Artists Using Natural Rubber.....	69
2.4. Shellac.....	71
2.4.1. Examples of Artists Using Shellac.....	72
2.5. Pergament	74
2.6. Artists and Natural Polymers.....	76
References.....	79
3. Chapter 3: Deficiency of natural materials and the search for synthetic analogues	89
3.1. How Polymers Became a Full-Fledged Chemical Industry. Bakelite	91
3.2. Acrylics	97
3.3. Epoxy Resins	100
3.4. Polyesters.....	106
3.5. Polyvinyl Chloride	106
3.6. Polymer clay in art.....	108
References.....	110

4. Chapter 4: The magic of polymers in the world of art: from sculptures and children's toys to the movie screen	119
4.1. Polymer sculptures with portrait resemblance. Cast marble. Fiberglass	121
4.2. A wonderful childhood surrounded by polymers. Toys	124
4.3. Polymers in cinema.....	127
4.3.1. The role of polymers in actors' make-up.....	128
4.3.2. Artificial snow for decorating various spaces...	129
References.....	132
5. Chapter 5: Case Studies of Artists Using Polymer Chemistry Contemporary Innovations and Future Directions.....	135
5.1. Anish Kapoor and Polymer Sculptures.....	137
5.2. Janet Echelman and Aerial Fiber Art.....	142
5.3. Theo Jansen and Kinetic Sculptures	146
5.4. Damien Hirst and Resin Art. Formaldehyde	149
5.5. Klari Reis Paintings: Harmony of Science and Art Painted with Epoxy Polymers.....	156
References.....	161
6. Chapter 6: Practical Applications of Polymer Chemistry in Art Conservation and Restoration.....	167
6.1. The Role of Polymers in Art Conservation	169
6.1.1. Cleaning and Surface Treatment.....	169

6.1.2. Consolidation and Strengthening. Acrylic and Polyurethane Polymers	175
6.2. The Restoration of Renaissance Paintings.....	177
6.3. The Conservation of Modern Artworks. Stabilizing Synthetic Materials	179
6.3.1. Types of Polymer-Based Stabilizers	180
6.3.2. Application in Artwork Preservation	183
6.4. Protective Coatings for Contemporary Paintings	185
6.5. Innovations in Polymer Chemistry for Art Conservation. Nanocomposite Materials	188
6.5.1. Composition of Nanocomposite Consolidants ..	189
6.6. Natural polymers in restoration of works of art.....	191
6.6.1. Resins	192
6.6.2. Adhesives	198
6.6.3. Drying oils.....	201
References	203
7. Chapter 7: Educational and Collaborative Aspects of Polymer Chemistry and Art. Groundbreaking Artworks and Scientific Advancements	215
7.1. Educational Programs and Workshops.....	217
7.2. Notable Collaborations Between Scientists and Artists	218
7.2.1. Neri Oxman and Mediated Matter Group	218

7.2.2. Olafur Eliasson and Scientific Research	223
7.3. The Role of Technology in Collaboration. 3D Printing	225
7.3.1. PLA(Polylactic Acid)	226
7.3.2. ABS (Acrylonitrile Butadiene Styrene)	228
7.3.3. PETG (Polyethylene Terephthalate Glycol-Modified)	231
7.3.4. Nylon (Polyamide)	233
7.3.5. TPU (Thermoplastic Polyurethane)	235
7.3.6. Metal Filaments.....	238
7.3.7. Wood Filaments	240
7.3.8. Ceramic Filaments	241
7.4. Digital Modeling and Simulation	245
7.4.1. Shape memory polymers.....	249
References.....	253
8. Chapter 8: Future Directions and Emerging Trends	269
8.1. Sustainable and Eco-Friendly Polymers.....	271
8.2. Advanced Fabrication Techniques.....	272
8.3. Collaborative Research and Development.....	272
8.4. Digital and Virtual Art.....	273
8.5. Education and Outreach.....	273
9. Appendix.....	276
