PREFACE	7
LIST OF SYMBOLS	9
INTRODUCTION	11
1 Introduction	11
1. MODELS WITHOUT CONSTRAINTS ON PARAMETERS	19
1 Estimation of the parameter β	19
2 Linearization regions for σ^2 and variance components	45
3 Confidence region	59
4 Testing a weakly nonlinear hypothesis	68
5 Linearization region for outliers	73
2. MODELS WITH THE TYPE I CONSTRAINTS	87
1 Linearization region for estimators of the parameter β	87
2 Linearization regions for σ^2 and variance components	98
3 Linearization region for the confidence ellipsoid	111
4 Testing a weakly nonlinear statistical hypothesis	121
5 Outliers	135
3. MODELS WITH THE TYPE II CONSTRAINTS	139
1 Linearization region for the parameters β_1 and β_2	139
1.1 Linearization region for the calibration curve	146
2 Linearization regions for σ^2 and variance components	159
3 Linearization region for the confidence ellipsoid	163
4 Linearization region for testing a weakly nonlinear hypothesis	169
5 Outliers	173
4. OTHER PROBLEMS	179
1 Equivalent adjustment algorithms	179
1.1 Notation and exposition of problems	179
1.2 Properties of the estimators $\widehat{\delta\beta}$ and $\widehat{\delta\beta}$	181
1.3 Estimation of σ^2	184
1.4 Estimation of variance components	188
2 The two-stage model and uncertainty of the types A and B	191
3 Additional experiment	195
3.1 Models without constraints	196
3.2 Additional experiment in the model with type-I constraints	198

3.3	Additional experiment in the model with type-II constraints	201
4	Weak nonlinearity in growth-curve models	206
4.1	Motivation and exposition of the problem	206
4.2	Notation and auxiliary statements	207
4.3	Solution in linear models	213
4.4	Criteria of linearization	217
5	Simultaneous equations in econometrics: An alternative approach	222
5.1	Motivation and formulation of the problem	222
5.2	Notation and auxiliary statements	223
5.3	Estimation of μ , \mathbf{G} and \mathbf{B}	224
5.4	Problem of linearization	228
APPENDIX		233
A.1	The Schwarz and the Scheffé inequalities	233
A.2	Generalized inverse of a matrix	235
A.3	Quadratic form of a normally distributed vector	237
A.4	Probability distributions	238
A.5	Linear model theory: Basic statements	239
A.6	Miscellaneous statements	245
