# Contents

PREFACE ix

INTRODUCTION xii

**1 THE CONTEXT PRINCIPLE**

Section i
Abstract objects, sortal concepts, empiricism 1

Section ii
Frege's three principles: preliminary remarks 6

Section iii
Object and concept: preliminary remarks 10

Section iv
The *Bedeutungen* of predicates 15

Section v
Ontological reductionism 25

Section vi
Numbers as Fregean concepts 36

Section vii
Understanding abstract sortal concepts 41

Section viii
The content of the Context Principle 50

**2 FOUR OBJECTIONS TO FREGE'S NOTION OF AN OBJECT**

Section ix
The characterisation of singular terms 53

Section x
Dummett on the role of reference in the semantics of abstract singular terms 64

Section xi
Abstract objects and causality: (I) Knowledge 84

Section xii
Abstract objects and causality: (II) Reference 97

**3 NUMBER AS A SORTAL CONCEPT**

Section xiii
Frege's account of numerical identity, $N^{=}$ 104

Section xiv
Julius Caesar and the natural numbers 107

Section xv
Natural numbers and progressions 117

## 4 NUMBER THEORY AND LOGIC

Section xvi
The project 130

Section xvii
Review of the status of $N^=$ 132

Section xviii
The infinity of the number series 145

Section xix
Deriving the Peano axioms 154
