

Content

Introduction	17
1 Soil Contamination	19
2 Environmental Burdens	23
3 Impact of Ore Mining and Processing on the Environment	25
3.1 Terminology and Assessment of Contaminants	27
3.1.1 Mercury	28
3.1.2 Lead	31
3.1.3 Cadmium and Zinc	34
3.1.4 Copper	38
3.1.5 Cobalt, Chromium and Nickel	40
3.1.6 Manganese and Iron	44
3.2 Assessment of Environmental Contamination	46
3.3 Strategies for Reducing Risk Elements in Soils	47
4 Wild Mushrooms from Polluted Areas	53
4.1 Mechanisms of Pollutant Accumulation	53
4.2 Species Prone to Bioaccumulation	54
4.3 Main Pollutants Found in Contaminated Mushrooms	55
4.4 Biomonitoring Applications and Influencing Factors	56
5 Health Risk Assessment	58
6 Possibilities for Reducing Health Risks Resulting from the Consumption of Mushrooms from Contaminated Areas	61
7 Material and Methods	64
7.1 Characteristics of the Study Area	64
7.2 Sampling and Preparation of the Samples	73
7.3 Determination of Soil Reaction (pH)	74

7.4	Determination of Organic Carbon and Humus Content in Soil/Substrate Samples	74
7.5	Determination of the element contents	75
7.6	Determination of the Total Element Content.....	75
7.7	Determination of Mobile Element Content	76
7.8	Determination of the Element Content in Plant and Mushroom Material.....	76
7.9	Limit, Critical and Background Values of the Studied Elements in Agricultural Soils	77
7.10	Assessment of the Soil Contamination	78
7.10.1	Contamination Factor and Degree of Contamination	78
7.10.2	Pollution load index.....	79
7.10.3	Index of Geoaccumulation.....	80
7.10.4	Potential Ecological Risk	80
7.10.5	Bioaccumulation factor	81
7.10.6	Translocation Quotient	81
7.11	Health Risk Assessment	81
7.11.1	Estimated Weekly Intake	81
7.11.2	Provisional Tolerable Weekly Intake.....	82
7.11.3	Target Hazard Quotient	82
7.11.4	Maximum Safe Consuming Quantity.....	83
7.11.5	Statistical analysis	83
7.12	Map processing.....	84
8	Results	85
8.1	Soil reaction.....	85
8.2	Oxidizable carbon and humus content.....	86

8.3	Total content of the studied elements in soil/substrate samples	87
8.4	Mobile Contents of the Studied Elements in soil/substrate samples	92
8.5	Content of the studied elements in plant samples	97
8.6	Bioaccumulation factor of plant samples.....	103
8.7	Contamination factor and degree of contamination.....	106
8.8	Pollution load index.....	110
8.9	Identification of Differences in Contents of Studied Elements Across Land Cover Types.....	111
8.10	Identification of Differences in Contamination Factors Across Land Cover Types	114
8.11	Identification of Differences in Bioaccumulation Factors Across Land Cover Types	116
8.12	Correlations Between Total Elemental Content in Soils/Substrates and Environmental Factors.....	116
8.13	Correlations Between Mobile Elemental Content in Soils/Substrates and Environmental Factors.....	118
8.14	Correlations Between Elemental Content in Plants and Environmental Factors	120
8.15	Redundancy and Principal Component Analyses.....	121
8.16	Mercury content in mushroom and underlying substrate samples	127
8.17	Assessment of Mercury Contamination and Ecological Risk	130
8.18	Human Health Risk Assessment Based on THQ, MSCQ, and %PTWI ..	131
8.19	Bioaccumulation factor of mushroom samples.....	132
8.20	Translocation Cap/Stipe Quotient	134
9	Discussion	136
10	Conclusion.....	143
11	References.....	145
