

## CONTENTS

Preface	9
Introduction	11
1. Survey of the literature	13
1.1 Geographical distribution and host-plants	13
1.2 Biological studies on <i>S. 24-punctata</i>	13
1.3 Diapause	14
1.3.1 Definition and criteria	14
1.3.2 The stage in which diapause occurs	15
1.3.3 Factors influencing the induction of diapause	16
1.3.4 Physiology of diapause	20
1.3.5 Termination of diapause	22
1.4 Host-plant relationships	25
1.4.1 Host-plant range	25
1.4.2 Food consumption	26
1.4.3 Host-plant selection	27
2. Morphology of the Alfalfa Ladybird, <i>S. 24-punctata</i>	30
2.1 Introduction	30
2.2 Adult	30
2.2.1 External characteristics	30
2.2.2 Internal characteristics of the reproductive organs	32
2.3 Egg	33
2.4 Larva	33
2.4.1 First instar larva	33
2.4.2 Second instar larva	35
2.4.3 Third instar larva	36
2.4.4 Fourth instar larva	37
2.4.5 Key for determining the larval instars and estimating their age	38
2.5 Pupa	38
3. Phenological studies on the Alfalfa Ladybird	39
3.1 Material and methods	39
3.1.1 Field observations	39
3.1.2 Rearing of various stages	39
3.1.3 Study of the effect of daily mean temperature, daily relative humidity and day-length on the population density	42
3.1.4 Mortality of diapausing beetles during hibernation	42
3.1.5 Effect of low temperature and cold storage on oviposition	43

3.2 Field observations	43
3.3 Sexual ratio in the collected beetle samples	45
3.4 Annual development and behaviour	47
3.4.1 Seasonal cycle of <i>S. 24-punctata</i>	47
3.4.2 Adult behaviour	50
3.4.3 Mortality of adults during hibernation	52
3.5 Effect of daily mean temperature, relative humidity and day-length on the population density	52
3.5.1 Effect of daily mean temperature on the population density	53
3.5.2 Effect of daily mean of relative humidity on population density	54
3.5.3 Effect of day-length (photoperiod) on the population density	54
3.5.4 The combined effect of the three previous environmental factors on the population density	55
3.6 Discussion	56
 4. Influence of temperature and host-plant on Alfalfa Ladybird	57
4.1 Influence of temperature on the rate of development	57
4.2 Influence of temperature on the rate of mortality	57
4.3 Influence of temperature on the ratio of females and males	59
4.4 Influence of host-plant on the duration of development, rate of mortality and sex ratio	59
4.4.1 Influence of host-plant on the duration of development	59
4.4.2 Influence of host-plant on the rate of mortality	62
4.4.3 Influence of host-plant on the sex ratio	62
4.5 Effect of temperature on the oviposition	64
4.5.1 Oviposition behaviour of overwintering females	64
4.5.2 Oviposition of first generation females	67
4.5.3 Oviposition behaviour of second generation females	67
4.6 Some effects of cold storage on the oviposition	68
4.6.1 Influence of cold storage period on oviposition behaviour	68
4.6.2 Effect of low temperature on oviposition	68
4.7 Discussion	74
 5. Effect of photoperiod and temperature on the rate of development and on the mortality of pre-adult stages	77
5.1 The rate of development	77
5.2 The mortality of pre-adult stages and the sex ratio	77
 6. Influence of temperature and photoperiod on food consumption and activity of adults	81
6.1 Material and methods	81
6.2 Influence of temperature on food consumption	81
6.3 Influence of photoperiod on food consumption by adults	82
6.4 Effects on the activity and hiding behaviour of adults	86
 7. Factors regulating diapause in Alfalfa Ladybird, <i>S. 24-punctata</i>	88
7.1 Material and methods	88
7.2 Behaviour of the laboratory strain of <i>S. 24-punctata</i>	90
7.3 Role of photoperiod, temperature and host-plant on diapause incidence	91
7.3.1 Influence of photoperiod on diapause induction	91

7.3.2 Influence of temperature on diapause induction	96
7.3.3 Influence of food plants on diapause induction	97
<b>8. Physiological and biochemical aspects of diapause in Alfalfa Ladybird, <i>S. 24-punctata</i></b>	
8.1 Material and methods	98
8.1.1 Study of changes in body contents of adults during activity and hibernating periods	98
8.1.2 Determination of diapause	100
8.2 Biochemical changes	101
8.2.1 Changes in body weight and water content of adults	101
8.2.2 Changes in lipid reserves	103
8.2.3 Changes in glycogen reserves	106
8.3 Anatomical studies on the development of reproductive organs, influenced by photoperiod	108
8.4 Histological comparison of diapausing and nondiapausing adults	109
8.4.1 Histology of the alimentary canal	110
8.4.2 Histology of ovarioles	113
8.4.3 Histology of male gonads	113
8.4.4 Histology of fat bodies	114
<b>9. Termination and inhibition of adult diapause in Alfalfa Ladybird</b>	115
9.1 Material and methods	115
9.1.1 Effect of light-breaks on the incidence of diapause	115
9.1.2 The effect of juvenile hormone analogues on diapause	115
9.2 Termination of natural diapause	117
9.3 The influence of light-breaks on diapause induction	117
9.4 Termination and inhibition of adult diapause by juvenile hormone and its analogues	119
9.4.1 Termination of diapause by synthetic juvenile hormone	120
9.4.2 Termination of diapause by two different juvenile hormone analogues	121
9.4.3 Termination of diapause by four different juvenilizing substances under short photoperiod conditions	123
9.4.4 Inhibition of diapause incidence in alfalfa ladybird adults by juvenile hormone analogues	126
<b>10. Discussion of the causes of variation in <i>S. 24-punctata</i> phenology from year to year</b>	129
<b>11. Food consumption</b>	136
11.1 Material and methods	136
11.1.1 Studies on host-plant selection	136
11.1.2 Oviposition preference	142
11.1.3 Food consumption at different temperatures	142
11.2 Influence of temperature on food consumption of larvae and adults with relation to changes in body weight	144
11.3 Observations on the food intake at different temperatures during 24 hours	146
11.4 A quantitative study of food consumption and growth	148

11.4.1 Effect of host-plants on food consumption of larvae and adults	148
11.4.2 Effect of food consumption on larval growth	149
11.4.3 Effect of food consumption on pupal and adult weights	151
 12. Food selection and food preference	152
12.1 Food choice by larvae	152
12.2 Further food choice experiments with larvae	153
12.3 Food choice of adults	155
12.4 Food choice experiments at different temperatures	156
12.4.1 Choice experiments with <i>Medicago sativa</i>	157
12.4.2 Choice experiments with <i>Trifolium pratense</i>	161
12.4.3 Choice experiments with <i>Saponaria officinalis</i>	165
12.4.4 Choice experiments with <i>Chenopodium album</i>	170
12.4.5 The toxicity of <i>Trifolium pratense</i>	172
12.4.6 Food choice experiments with leaf sap	173
 13. Oviposition preference	175
13.1 Preliminary experiments	175
13.2 Oviposition preference at constant temperatures	175
13.3 Further experiments on oviposition choice with <i>T. pratense</i>	177
13.4 Effect of age of food plant and food deprivation on oviposition	179
13.5 Discussion	181
 14. Conclusions	184
14.1 Phenological studies on the Alfalfa Ladybird	184
14.1.1 Field observations	184
14.1.2 Seasonal cycle of <i>Subcoccinella 24-punctata</i> L.	184
14.1.3 Adult behaviour	185
14.1.4 Mortality of adults during hibernation	185
14.1.5 Effect of environmental factors on the population density	185
14.2 Some biological aspects on Alfalfa Ladybird, <i>S. 24-punctata</i>	185
14.2.1 Influence of temperature on the rate of development	185
14.2.2 Influence of temperature on the rate of mortality and sex ratio	186
14.2.3 Influence of food plant on the duration of development	186
14.2.4 Influence of food plant on the rate of mortality and sex ratio	186
14.2.5 Effect of temperature on oviposition	186
14.2.6 Effect of low temperature and cold storage on oviposition	187
14.3 Photoperiod, temperature and diapause relationships	187
14.4 Food consumption, host-plant selection and oviposition preference of the Alfalfa Ladybird	189
 Refereoces	191
