

# Disease-a-Month®

## Metabolic Syndrome and Prediabetes

---

<b>Introduction</b>	55
<b>Definition of Metabolic Syndrome</b>	57
<b>Prevalence of Metabolic Syndrome</b>	58
<b>Pathophysiology of Metabolic Syndrome and Prediabetes</b>	61
<b>Metabolic Syndrome Components</b>	68
Measures of Obesity: Why WC Was Chosen as a Risk Factor	68
Hypertension	69
Measures of Dyslipidemia: Why Increased TG/Low HDL Was Chosen as a Risk Factor	70
Inflammatory/Coagulation Markers	71
Markers of Subclinical Atherosclerosis in MetSyn	73
<b>Metabolic Syndrome and Cardiovascular Disease</b>	73
<b>Measures of Insulin Resistance/Hyperinsulinemia</b>	84
Insulin Resistance and the Development of Hypertension	85
Insulin Resistance and the Development of Dyslipidemia	85
<b>Metabolic Syndrome is a Prediabetes State</b>	86
Impaired Glucose Tolerance and Risk of Diabetes	86
Impaired Fasting Glucose Alone as a Predictor of Incident Diabetes	87
MetSyn Trait Combinations Which Best Predicts the Risk of Incident Diabetes	87
Impact of the New Definition of IFG in Predicting Diabetes	89
Other Non-MetSyn Predictors of Diabetes	90
<b>Other Disease States Associated with Metabolic Syndrome</b>	92
<b>Treatment of Metabolic Syndrome—Recent Guidelines and Evidence-Based Data</b>	94
<b>Lifestyle Trials</b>	95
Diet and Physical Activity	95
Guidelines for Weight Reduction and Physical Activity	99
Endothelial Dysfunction	101
<b>Pharmacological Trials</b>	102
