## Part I Introduction and Preliminaries

<b>1</b>	<b>Introduction</b> .....	3
<b>2</b>	<b>Preliminaries</b> .....	17
2.1	Basic Notation and Weighted Function Spaces.....	17
2.2	The Bogovskii Operator .....	22
2.3	Some Auxiliary Results .....	23
2.4	The Littlewood–Paley Decomposition .....	27
2.5	Fundamental Solution of the Nonsteady “Rotating” Oseen Problem .....	28
2.5.1	Basic Properties of the Fundamental Solution $\Gamma = \Gamma_{jk}$ .....	35
2.5.2	Further Properties of $\Gamma_{jk}$ : Pointwise Estimates.....	38
2.6	$T$ -Time-Periodic Functions .....	47

## Part II Linear Theory

<b>3</b>	<b>The Steady Stokes Type Problem</b> .....	53
3.1	A Strong Solution in $L^q$ .....	53
3.1.1	Introduction.....	53
3.1.2	Two Differential Forms of the Problem .....	55
3.1.3	The Main Results.....	59
3.1.4	Various Remarks .....	61
3.1.5	Proofs of Theorems 3.1 and 3.3 Using the Associated Ordinary Angular Differential Equation ....	64
3.1.6	The Associated Time-Periodic Stokes Problem and the Proof of Theorem 3.1.....	73
3.1.7	The Nonhomogeneous Problem and Proof of Theorem 3.2 .....	77
3.2	A Weak Solution in the Whole Space $\mathbb{R}^3$ and in an Exterior Domain .....	77

	3.2.1	The Whole Space Problem.....	79
	3.2.2	The Problem in an Exterior Domain .....	82
3.3		The Steady Stokes Type Problem in Weighted Spaces.....	88
	3.3.1	A Strong Solution in the Whole Space .....	88
	3.3.2	Proof of Theorem 3.8 .....	91
	3.3.3	A Strong Solution in an Exterior Domain.....	104
3.4		Very Weak Solutions to the Stokes Type Problem .....	115
	3.4.1	The Homogeneous Case: Very Weak Solutions .....	115
	3.4.2	The Case of Nonhomogeneous Dirichlet Conditions: Generalized Very Weak Solution .....	119
	3.4.3	Proof of Theorem 3.13 .....	123
3.5		Notes to the Stokes Type Problem .....	127
	3.5.1	Concluding Remarks to Previous Sections.....	127
	3.5.2	Asymptotic Behavior.....	127
	3.5.3	2D Case .....	130
<b>4</b>		<b>The Steady Oseen Type Problem .....</b>	<b>133</b>
	4.1	A Strong Solution in $L^q$ .....	133
	4.1.1	The Main Result and Corollaries .....	134
	4.1.2	Proof of Theorem 4.1 Using the Associated Ordinary Angular Differential Equation .....	136
	4.1.3	Proofs of Lemmas 4.2 and 4.3 .....	145
	4.1.4	Proof of Corollary 4.1.....	148
	4.1.5	The Associated Time-Periodic Oseen Problem and Proof of Theorem 4.1.....	152
	4.2	$L^q$ -Theory of Weak Solutions of the Oseen Type Problem in the Whole Space and in an Exterior Domain .....	159
	4.2.1	Introduction.....	159
	4.2.2	The Main Result.....	161
	4.2.3	Details of Proof—Boundedness of $\partial_3 U_0$ .....	183
	4.3	Further Properties of the Oseen Type Problem .....	185
	4.3.1	Further Properties of the Rotating Oseen in the Whole Space $\mathbb{R}^3$ .....	187
	4.3.2	Further Properties of the Rotating Oseen in the Exterior Domain.....	191
	4.3.3	The Regularity of Very Weak Solutions.....	194
	4.3.4	Uniqueness of the Very Weak Solution .....	200
	4.4	$L^q$ -Weighted Theory of the Strong Solution to Oseen Type Problem .....	208
	4.4.1	Preliminaries.....	211
	4.4.2	Proofs .....	221
	4.5	$L^q$ -Weighted Theory of the Weak Solution to the Oseen Type Problem .....	232
	4.5.1	Proofs .....	238

4.6	$L^q$ -Weighted Theory of the Very Weak Solutions to the Oseen Type Problem .....	243
4.7	Notes to the Oseen Type Problem .....	246
<b>5</b>	<b>Representation Formula and the Asymptotic Behavior of the Steady Oseen Type Problem .....</b>	<b>247</b>
5.1	Introduction .....	247
5.1.1	Fundamental Solution of the Stationary Problem .....	249
5.1.2	Mathematical Preliminaries to the Representation Formula .....	264
5.2	Derivation of the Representation Formula .....	267
5.3	Asymptotic Behavior .....	271
5.3.1	Some Volume Potentials .....	271
5.3.2	Asymptotic Profile .....	275
5.3.3	Asymptotic Profile of the Gradient of the Velocity Field .....	293
5.3.4	Decay Estimates of the Second Derivatives of the Velocity .....	295
5.4	Leray Solution .....	296
5.4.1	Introduction .....	296
5.4.2	Auxiliary Results .....	297
5.4.3	Representation Formula for the Leray Solution .....	298
5.4.4	Asymptotic Profile .....	302
5.5	Notes on Chap. 5 .....	304
<b>6</b>	<b>Artificial Boundary Conditions for the Oseen Type Problem .....</b>	<b>307</b>
6.1	Introduction .....	307
6.2	Preliminaries .....	308
6.3	Auxiliary Results to Asymptotic Behavior of the Pressure .....	309
6.4	Decay Estimate of the Pressure .....	310
6.5	Formulation of the Problem with Artificial Boundary Conditions .....	320
<b>7</b>	<b>The Oseen-Type Problem: A Weak Solution in Anisotropic <math>L^2</math>-Spaces .....</b>	<b>327</b>
7.1	Introduction .....	327
7.2	Friedrichs–Poincaré Inequality .....	330
7.3	Pressure in $\mathbb{R}^3$ and Uniqueness Theorems .....	332
7.3.1	The Pressure in $\mathbb{R}^3$ .....	333
7.3.2	Uniqueness in $\mathbb{R}^3$ .....	333
7.3.3	Uniqueness in an Exterior Domain $\mathcal{D} \subset \mathbb{R}^3$ .....	335
7.4	Existence of a Solution in the Whole Space .....	336
7.4.1	The Problem in $B_R$ .....	336
7.5	Existence of Solution in Exterior Domains .....	342
7.5.1	Homogenous Dirichlet Boundary Conditions .....	342
7.5.2	Appendix A .....	349
7.5.3	Appendix B .....	349
7.6	Notes on Chap. 7 .....	350

<b>8</b>	<b>Stokes and Oseen Type Operators: Spectral Theory and Generated Semigroups</b> .....	351
8.1	Associated Stokes and Oseen Type Operators and Their Basic Properties .....	351
8.2	A Brief Survey of Basic Notions from Spectral Theory of Operators in a Banach Space .....	364
8.3	Spectral Theory of the Stokes Type Operator .....	368
8.3.1	$L^2$ -Theory .....	368
8.3.2	$L^q$ -Theory .....	377
8.4	Spectral Theory of the Oseen Type Operator .....	389
8.4.1	$L^2$ -Theory .....	390
8.4.2	$L^q$ -Theory .....	401
8.5	Semigroups Generated by the Stokes and Oseen Type Operators .....	416
8.5.1	Basic Information on the Semigroups That Involve the Rotational Effect .....	416
8.5.2	On the Uniform Growth Bound of the Semigroups .....	418
 <b>Part III Navier–Stokes Type Equations</b>		
<b>9</b>	<b>A Brief Introduction to the Existence Theory for the Stationary Navier–Stokes Type Problem Around Translating and Rotating Body</b> .....	427
9.1	$L^2$ Theory .....	427
9.1.1	Navier–Stokes Type Problem Without the Oseen Term .....	427
9.1.2	The Navier–Stokes Type Problem with the Oseen Term .....	432
9.2	$L^p$ -Theory .....	438
<b>10</b>	<b>Pointwise Decay for the Stationary Navier–Stokes Type Problem</b> ....	441
10.1	Introduction .....	441
10.2	Auxiliary Results .....	446
10.3	$L^p$ -Estimates of the Volume Potential $\mathfrak{R}(f)$ .....	457
10.4	$L^p$ -Estimates of the Velocity and Its Gradient .....	463
10.5	Pointwise Estimates of the Velocity .....	469
10.6	Pointwise Estimates of the Gradient of the Velocity .....	475
<b>11</b>	<b>Asymptotic Behavior of the Solutions of the Navier–Stokes Type Problem</b> .....	479
11.1	Introduction .....	479
11.2	Discussion and Main Results .....	480
11.3	Historical Remarks .....	487
11.4	Notation and Auxiliary Results .....	488
11.5	Representation Formula for the Navier–Stokes System .....	494
11.6	Proof of Theorem 11.2 .....	498

11.7	Preliminaries to Fourier Transforms .....	507
11.8	Proof of Theorem 11.3 and Corollary 11.1 .....	510
11.9	Proof of Theorem 11.4.....	513
11.10	Notes on Chap. 11.....	514
<b>12</b>	<b>A Brief Introduction to the Existence Theory for the Nonstationary Navier–Stokes Type Problem Around Translating and Rotating Body .....</b>	<b>517</b>
12.1	Local in Time Existence of a Strong Solution .....	518
12.1.1	Introduction.....	518
12.1.2	Preliminaries.....	520
12.1.3	The Local Transformation .....	521
12.1.4	The System in the Cylindrical Domain .....	523
12.1.5	Proof of Theorem 12.1 .....	525
12.1.6	Proof of the Local Existence and Uniqueness Result....	529
12.1.7	Proof the Global Existence and Uniqueness in 2D .....	532
12.2	Global in Time Existence of a Strong Solution.....	538
12.2.1	Global Existence and Convergence to Steady State .....	539
12.3	Notes on Chap. 12.....	549
<b>Part IV Appendix</b>		
<b>13</b>	<b>Appendix .....</b>	<b>553</b>
13.1	The Case When $\mathbf{u}_\infty$ Is Not Vanished or Not Parallel to the Angular Velocity $\boldsymbol{\omega}$ .....	553
13.2	Estimates of the Oseen Kernels .....	559
13.2.1	Introduction and Basic Notation.....	559
13.2.2	Oseen Fundamental Solution .....	560
13.2.3	$L^\infty$ -Estimates of a Convolution in $\mathbb{R}^N$ .....	569
13.2.4	$L^\infty$ -Estimates for Weakly Singular Oseen Kernels .....	582
13.2.5	$L^p$ -Estimates for Weakly Singular Oseen Kernels .....	595
13.3	Singular Integrals .....	602
