

Contents

1	Introduction to Model Predictive Control	1
1.1	MPC Strategy and Key Components	3
1.2	Model	5
1.2.1	Process Model	5
1.2.2	Discrepancy Model	8
1.3	Optimizer	10
1.3.1	Objective Function	10
1.3.2	Constraints	12
1.3.3	Obtaining the Control Law	13
1.4	Historical Perspective	14
1.5	Industrial Technology	17
1.6	Outline of the Chapters	19
1.7	Exercises	20
	References	21
 Part I Fundamentals of Commercial Model Predictive Controllers		
2	Model Predictive Control Using Convolution Models	27
2.1	Model Algorithmic Control	27
2.1.1	Process Model and Prediction	28
2.1.2	Reference Trajectory	29
2.1.3	Control Law	30
2.2	Dynamic Matrix Control	31
2.2.1	Prediction	31
2.2.1.1	Measurable Disturbances	33
2.2.2	Control Algorithm	33
2.3	The Multivariable Case	37
2.4	Implementation Issues	42
2.4.1	Dead Times	42
2.4.2	Transmission Zeros	44
2.4.3	Degrees of Freedom	45
2.5	Exercises	46
	References	47

3	Model Predictive Control Using Transfer Functions	49
3.1	Generalized Predictive Control	49
3.1.1	Prediction Model	50
3.1.2	Cost Function and Optimization	55
3.2	Auxiliary Polynomials and Closed-Loop Relationships	60
3.2.1	The T Polynomial	60
3.2.2	The P Polynomial	64
3.3	Delays and the Use of a Different Predictor in GPC	65
3.3.1	Equivalent Structure	66
3.3.2	Alternative Free Response Computation	68
3.4	Stability in GPC	69
3.4.1	Stable Generalized Predictive Control	69
3.4.2	Constrained Receding-Horizon Predictive Control	71
3.5	Other MPC Methods Based on Transfer Functions	74
3.6	The Multivariable Case	76
3.6.1	The General MIMO CARIMA Model Approach	77
3.6.2	Optimization	82
3.7	Obtaining a Matrix Fraction Description	83
3.7.1	Parametric Identification	84
3.8	Implementation Issues	88
3.8.1	Dead Times	88
3.8.2	Transmission Zeros	93
3.9	Exercises	97
	References	100
4	Model Predictive Control Using State-Space Models	103
4.1	State-Space Formulation	103
4.2	Predictive Functional Control	111
4.3	Dynamic Programming and Linear Quadratic Optimal Control	113
4.3.1	Infinite Horizon	116
4.4	State-Space and Input–Output Models	118
4.5	Implementation Issues	120
4.6	Exercises	122
	References	123
5	Constrained Model Predictive Control	125
5.1	Constraints and Optimization	125
5.2	Unconstrained MPC Formulations with Clipping	127
5.3	Constraints in MPC	128
5.3.1	Input Constraints	128
5.3.2	Output Constraints	130
5.3.3	Terminal Constraints	133

5.3.4	General Form	134
5.4	Constraint Removal	135
5.4.1	Removing Equality Constraints	135
5.4.2	Removing Inequality Constraints	137
5.5	Quadratic Programming	138
5.5.1	The Case of Linear Inequalities	140
5.6	How to Solve Quadratic Programs?	141
5.6.1	Feasible Direction Methods	142
5.6.2	The Active Set Method	143
5.6.3	Interior Point Methods	144
5.6.4	The Primal-Dual Method	147
5.6.5	Pivoting Methods	147
5.7	Linear Programming with a 1-Norm Objective	149
5.8	Recursive Feasibility and Stability of Nominal MPC	153
5.8.1	Ensuring Stability via Terminal Cost	155
5.9	Constraint Management	157
5.9.1	Recovering Feasibility	157
5.9.2	Constraints and Stability	159
5.10	Multi-objective Optimization in Constrained MPC	160
5.10.1	Prioritization of Objectives	161
5.11	Exercises	163
	References	164

Part II Advanced Topics in Model Predictive Control

6	Robust and Stochastic Model Predictive Control	169
6.1	Process Models and Uncertainties	170
6.2	Min–Max Model Predictive Control	175
6.3	Min–Max MPC with Closed-Loop Predictions	181
6.4	Robust Constraint Satisfaction Under Uncertainties	187
6.5	Predictive Controllers with Robust Constraint Satisfaction	192
6.6	Stochastic Model Predictive Control	195
6.7	Exercises	203
	References	205
7	Nonlinear and Hybrid Model Predictive Control	209
7.1	Modelling and Identification of Nonlinear Systems	210
7.2	Solution of the NMPC Problem	221
7.3	Alternative NMPC Methods	229
7.4	The Case of Hybrid Systems	235
7.4.1	Model Predictive Control of Hybrid Systems	240
7.5	Stability and Nonlinear MPC	246
7.6	Exercises	252
	References	255

8	Distributed Model Predictive Control	259
8.1	Non-centralized MPC Architectures	260
8.2	Distributed Model Predictive Control	264
8.2.1	Anatomy of DMPC Control Methods	266
8.3	Coalitions and Clusters in DMPC	274
8.4	Cybersecurity in DMPC	283
8.4.1	Cyber-defence Mechanisms	285
8.5	Exercises	288
	References	291
9	Fast Methods for Implementing Model Predictive Control	297
9.1	Piecewise Affinity of MPC	298
9.1.1	The 1-Norm and ∞ -Norm Cases	300
9.2	MPC and Multiparametric Programming	303
9.3	Piecewise Implementation of MPC	307
9.4	Explicit MPC and Uncertain Systems	311
9.5	Fast Approximated Implementations for MPC	315
9.6	Exercises	320
	References	321
10	Applications	323
10.1	Solar Power Plants	323
10.2	Olive Oil Mill	332
10.3	Pilot-Scale Microgrid	338
10.4	Hospital Inventory Management	348
10.5	Copper Foundry	355
10.6	Exercises	366
	References	372
