CONTENTS

CHAPTER I

THE EQUATION OF WAVE MOTION

	PAGE
Introductory	1
General Form of Progressive Waves	1
Harmonic Waves	2
Plane Waves	4
The Equation of Wave Motion	5
Principle of Superposition	5
Special Types of Solution	6
List of Solutions	13
Equation of Telegraphy	15
Exponential Form of Harmonic Waves	16
A Solved Example	17
Examples	19

CHAPTER II

WAVES ON STRINGS

The Differential Equation	21
Kinetic and Potential Energies	23
Inclusion of Initial Conditions	25
Reflection at a Change of Density	25
Reflection at a Concentrated Load	28
Alternative Solutions	29
Strings of Finite Length, Normal Modes	30
String Plucked at its Mid-point	31
The Energies of the Normal Modes	33
Normal Co-ordinates	36
String with Load at its Mid-point	37
Damped Vibrations	39
Method of Reduction to a Steady Wave	40
Examples	41

CHAPTER III

WAVES IN MEMBRANES

PAGE

The Differential Equation 43
Solution for a Rectangular Membrane 44
Normal Co-ordinates for Rectangular Membrane . . . 47
Circular Membrane 48
Examples 50

CHAPTER IV

LONGITUDINAL WAVES IN BARS AND SPRINGS

Differential Equation for Waves along a Bar . . . 51
Free Vibrations of a Finite Bar 53
Vibrations of a Clamped Bar 53
Normal Co-ordinates 53
Case of a Bar in a state of Tension 54
Vibrations of a Loaded Spring 55
Examples 59

CHAPTER V

WAVES IN LIQUIDS

Summary of Hydrodynamical Formulæ 60
Tidal Waves and Surface Waves 62
Tidal Waves, General Conditions 63
Tidal Waves in a Straight Channel 64
Tidal Waves on Lakes and Tanks 67
Tidal Waves on Rectangular and Circular Tanks . . . 70
Paths of the Particles 70
Method of Reduction to a Steady Wave 71
Surface Waves, the Velocity Potential 72
Surface Waves on a Long Rectangular Tank . . . 74
Surface Waves in Two Dimensions 75
Paths of the Particles 77
The Kinetic and Potential Energies 78

PAGE

Rate of Transmission of Energy 79
Inclusion of Surface Tension, General Formulæ . . . 81
Capillary Waves in One Dimension 83
Examples 84

CHAPTER VI

SOUND WAVES

Relation between Pressure and Density 87
Differential Equation in Terms of Condensation . . . 87
Boundary Conditions 90
Solutions for a Pipe of Finite Length 90
Normal Modes in a Tube with Movable Boundary . . 91
The Velocity Potential, General Formulæ 93
The Differential Equation of Wave Motion 93
Stationary Waves in a Tube of Finite Length . . . 95
Spherical Symmetry 95
The Kinetic and Potential Energies 96
Progressive Waves in a Tube of Varying Section . . . 97
Examples 100

CHAPTER VII

ELECTRIC WAVES

Maxwell's Equations 102
Non-conducting Media, the Equation of Wave Motion . . 105
Electric and Magnetic Potentials 106
Plane Polarised Waves in a Dielectric Medium . . . 109
Rate of Transmission of Energy in Plane Waves . . . 111
Reflection and Refraction of Light Waves 113
Internal Reflection 118
Partially Conducting Media, Plane Waves 119
Reflection from a Metal 122
Radiation Pressure 124
Skin Effect 125
Examples 125

CHAPTER VIII

GENERAL CONSIDERATIONS

	PAGE
Doppler Effect	128
Beats	130
Amplitude Modulation	132
Group Velocity	132
Motion of Wave Packets	135
Kirchhoff's Solution of the Equation of Wave Motion	138
Fresnel's Principle	142
Diffraction at a pin-hole	145
Fraunhofer Diffraction Theory	148
Retarded Potential Theory	151
Examples	153
Index	157
