CHAPTER I: INTRODUCTORY - - - - - 1

1. Introductory. 2. Position; Frames of reference. 3. Displacement. 4. Translation. 5. Composition of displacements. 6. Rest and motion. 7. Units. 8. Velocity.

EXERCISES I.

9. Components of velocity of a point moving in any plane path.

EXERCISES II.

10. Acceleration. 11. The parallelogram of accelerations. 12. Units and dimensions. 13. Acceleration of a point moving in a circle with uniform speed. Component accelerations.

EXERCISES III.

14. Summary.

EXERCISES IV.

15. The Hodograph.

EXERCISES V.

16. Vectors. 17. Moment of a localised vector. 18. Angular velocity and acceleration. 19. Rotation. 20. Units and dimensions of angular velocity and acceleration. 21. Uniform angular velocity and acceleration. Kinematic equations. 22. Examples of angular motion.

EXERCISES VIA.

23. Moving axes in two dimensions.

EXERCISES VIB.

24. Historical notes: (1) Galileo, (2) Copernicus.

CHAPTER II: FUNDAMENTAL DYNAMICAL PRINCIPLES - - - - - - - - 67

1. Newton's Laws of Motion. 2. Evidence of their truth. 3. Explanation of terms used. 4. Force defined. 5. Law II—explanation of terms used. 6. The Third Law of Motion. 7. The fundamental equation of motion. 8. The equations of motion of a particle of given mass in two dimensions. 9. Centroids of a system of mass particles. 10. Centroid considered vectorially. 11. Work. 12. Power defined. 13. Energy. 14. Equations of motion of a system of mass particles in two dimensions. 15. System of mass particles acted on by given impulsive forces.

EXERCISES VIIA. EXERCISES VIIB.

CHAPTER III: RECTILINEAR MOTION OF A PARTICLE - - - - - - - - 120

1. Expressions for velocity and acceleration. 2. Uniform acceleration in a straight line. 3. Acceleration directed towards a fixed

PAGE

point in the line and varying directly as its distance from it. 4. Composition of Simple Harmonic Motions in the same straight line.

EXERCISES VIIIA. EXERCISES VIIIB.

6. Acceleration directed away from a fixed point varying as the distance. 7. Acceleration directed to a fixed point and varying inversely as the square of the distance. 8. Motion of two bodies directly towards one another under their mutual attraction. 9. Other cases in which the acceleration is a function of the distance. 10. Agent working at constant power.

EXERCISES IX.

EXERCISE ON RESISTED MOTION.

11. Oscillating particle with superposed forced vibration. 12. Damped simple harmonic motion. 13. Resistance varying as the square of the velocity. 14. Motion under constant force subject to a resistance varying as the velocity.

EXERCISES X.

15. Impulsive forces and impact of smooth homogeneous spheres.

EXERCISES XI.

15.6. Kinetic energy lost by impact.

EXERCISES XIIA.

16. Rectilinear motion of a body of changing mass.

EXERCISES XIIB.

17. Rectilinear motion of a chain.

EXERCISES XIII.

EXERCISES XIV.

CHAPTER IV: ACCELERATIONS PARALLEL TO RECTANGULAR AXES - - - - - - 195

1. Equations of motion.

EXERCISES XV.

EXERCISES XVI.

EXERCISES XVII. On projectiles involving impact.

2. Motion under a force to a fixed point varying as the distance.

EXERCISES XVIII. On orbital motion under the law of direct distance.

4. Motion under the law of direct distance can be regarded as compounded of two simple harmonic motions of the same period in different directions. 5. Path when the force is repulsive. 6. Composition of simple harmonic motions in two directions. 7. Given the law of force, to find its path, and vice versa.

EXERCISES XIX.

8. Moving axes in two dimensions.

EXERCISES XX.

PAGE

CHAPTER V: RADIAL AND TRANSVERSAL ACCELERATIONS—CENTRAL FORCES - - 233

EXERCISES XXI.

2. Forces to fixed centres, such that their magnitudes are single-valued functions of the distances from these centres, form a consecutive system of forces. 3. Path of a particle moving under the action of a force to a fixed centre.

EXERCISES XXII.

4. Apses and apsidal distances.

EXERCISES XXIII.

EXERCISES XXIV.

5. Nearly circular orbit. Condition of stability.

EXERCISES XXV.

EXERCISES XXVI. Classification of orbits.

7. Equations of motion when the force is not wholly radial, the motion being in one plane. 8. Motion in a field of force in two dimensions. 9. More than one centre of force.

EXERCISES XXVII.

10. Historical note explaining Newton's methods.

CHAPTER VI: FREE MOTION UNDER THE LAW OF INVERSE SQUARE - - - - - - 280

1. Law of force to the focus of a conic is that of the inverse square of the distance. 2. Particle projected with velocity V from a point P, under a force μ/r^2 per unit mass directed towards a fixed point S, where $SP=r$ will describe a conic having S as focus. 3. Periodic time of orbit. 4. Construction of orbit. 5. Hodograph of orbit.

EXERCISES XXVIII.

6. Envelope of trajectories with given speed of projection. 7. Two possible directions with given speed at P to pass through Q. 8. Projection from the Earth taking account of variations of gravity.

EXERCISES XXIX.

9. Time of describing any part of the orbit. 10. Kepler's laws. 11. Newton's Law of Gravitation. 12. The corrected form of Kepler's laws.

EXERCISES XXX.

13. Perturbations.

EXERCISES XXXI.

14. Historical Notes: (1) Newton, (2) Kepler.

PAGE

CHAPTER VII: CONSTRAINED MOTION IN TWO DIMENSIONS - - - - - - - - 319

1. One-sided constraints. 2. Smooth fixed curve.
EXERCISES XXXII.

3. Time of describing an arc.
EXERCISES XXXIII.

4. Principles of conservation of energy and conservation of linear and angular momentum applied to cases of motion of connected particles. 5. Small oscillations about a position of equilibrium of a system having one degree of freedom.
EXERCISES XXXIV.

6. Motion of a particle at the end of a fine inextensible string wound on a fixed plane curve. 7. Motion of a particle in a smooth tube in form of a plane curve, rotating in its own plane about a fixed point.
EXERCISES XXXV.

8. Motion of a particle sliding on a rough plane curve in a vertical plane.
EXERCISES XXXVI.

CHAPTER VIII: MOTION IN A RESISTING MEDIUM - - - - - - - - - 351

1. Complete solution in general impossible.
EXERCISES XXXVII.

2. Motion of a heavy particle in a medium in which the resistance varies as the square of the velocity. 3. Systematic method by Greenhill.
EXERCISES XXXVIII.

4. The instantaneous parabola. 5. Motion in a resisting medium under a central force.
EXERCISES XXXIX.

CHAPTER IX: MOTION OF A CHAIN IN TWO DIMENSIONS - - - - - - - - 363

1. Equations of motion.
EXERCISES XL.

2. Initial motion of a chain.
EXERCISES XLI.
EXERCISES XLII.

3. Motion of a chain under impulses.
EXERCISES XLIII.

PAGE

4. Motion of a chain inside a smooth tube in the form of a plane curve.

EXERCISES XLIV.

5. Case of a chain in a rotating tube.

EXERCISES XLV.

CHAPTER X: MOTION OF A PARTICLE IN THREE DIMENSIONS - - - - - - - - 378

1. Component accelerations in Cartesian, spherical polar and cylindrical coordinates. 2. Motion of a heavy particle on a smooth fixed surface of revolution whose axis is vertical.

EXERCISES XLVI.

3. The spherical pendulum.

EXERCISES XLVII.

4. Motion on the surface of a right circular cone.

EXERCISES XLVIII.

EXERCISES XLIX.

5. Component accelerations of a point moving in a tortuous curve.
6. Motion of a particle on a fixed surface.
7. Motion of a bead on a smooth wire, in the form of a plane curve, which is made to rotate with constant angular velocity about a fixed vertical axis in its plane.

EXERCISES L.

8. Motion of a heavy chain in a smooth tube in the form of a plane curve which is made to revolve uniformly about a vertical axis in its plane.

EXERCISES LI.

9. Vectorial character of angular velocity. 10. Instantaneous axis when one point fixed in rigid body. 11. The parallelepiped of velocities, linear and angular. 12. Velocities and accelerations of a point referred to three moving axes mutually at right angles. 13. Motion of a particle near the Earth's surface, taking into account the Earth's rotation.

EXERCISES LII.

INDEX. 417
