

Contents

<i>Preface</i>		xiii
<i>Acknowledgments</i>		xv
1	Speech-Language Pathology, Mild Cognitive Impairment, and Dementia	1
	Introduction	1
	Communication Defined	2
	Rationale for Therapy	2
	Neuroplasticity	3
	Memory Systems and Their Selective Vulnerability to Disease	3
	Cognitive Reserve	5
	Summary of Important Points	6
	References	7
2	Cognition, Memory, and Communication	11
	Cognition and Memory	11
	The "Company of Cognition"	11
	Memory Defined	12
	Sensory Memory	12
	Working Memory	13
	Long-Term Memory	14
	Relation of Cognition and Memory to Communication	19
	Production of Linguistic Information	19
	Comprehension of Linguistic Information	20
	Summary of Important Points	20
	References	21
3	MCI: Mild Cognitive Impairment a.k.a. Mild Neurocognitive Disorder	25
	Introduction	25
	Prevalence of MCI	25
	Diagnostic Criteria for MCI	26
	Risk and Protective Factors	26
	Causes and Clinical Presentations of MCI	27
	Neuropsychological Deficits Associated with MCI	27
	Language Performance Deficits	28
	Conversion to Dementia	32
	Conclusion	33
	Summary of Important Points	33
	References	33

4	Alzheimer's Dementia	39
	Alzheimer's Disease (AD) Introduction	39
	Diagnostic Criteria for AD	39
	Risk Factors for AD	42
	Age	42
	Family History of AD	42
	Education	44
	History of Head Trauma	45
	Loneliness	45
	Gender	45
	Maternal Age	45
	Apolipoprotein E4 Allele	46
	Chronic Lack of Sleep	46
	Mild Cognitive Impairment	46
	Predictors of Disease Progression	46
	Protective Factors	46
	Effects of AD on Cognitive and Communicative Functions	46
	Early Stage	47
	Middle Stage	50
	Late Stage	52
	Summary of Important Points	53
	References	54
5	Dementia and Down Syndrome	61
	Introduction	61
	Common Features of People with DS	61
	Risk of Developing Alzheimer's Disease	61
	Prevalence of Dementia in DS	62
	Diagnosing Dementia in Individuals with DS	63
	A Study of the Cognitive-Communication Profiles of DS Adults with and without Dementia	64
	Language and Communication Skills in Adults with DS	64
	Premorbid Language	64
	Language Change in Dementia	65
	Cognitive and Behavioral Measures Appropriate for Individuals with DS	65
	Summary of Important Points	67
	References	67
6	Vascular Dementia	71
	Introduction	71
	Neuropathology	71
	Diagnostic Criteria	73
	Diagnosing Vascular Cognitive Impairment	73

Risk Factors for VaD	73
Aging	73
Hypertension	73
Family History	74
Ethnicity and Gender	74
Diabetes Mellitus (Type 2)	74
Lifestyle	74
Vascular Pathology May Be a Trigger for Alzheimer's Dementia	75
Comparison of Effects of Cortical and Subcortical Pathologies on Cognition and Communicative Function	75
Cortical Pathologies	75
Subcortical Pathologies	76
VCI Compared with AD	76
Observations from Course-of-Disease Studies	76
Summary: Effects of VCI on Cognitive and Communicative Functioning	77
Conclusion	77
Summary of Important Points	77
References	78
7 Parkinson's Disease and Dementia	83
Parkinsonism and Parkinson's Disease (PD)	83
Incidence and Prevalence	83
Symptoms of PD: Motor, Affective, Cognitive	83
Neuropathology of PD	85
Risk Factors	85
Diagnostic Criteria for PD	86
Cognition: Continuum from Normal to Dementia	86
Diagnostic Criteria PD-MCI	86
Diagnostic Criteria for Parkinson's Disease with Dementia (PDD)	87
Prevalence of PDD	87
Nature of Cognitive Impairment	87
Attention/Executive Function	87
Memory	88
Visuoperceptual/Visuospatial Function Deficits	89
Communicative Function of PD Patients without and with Dementia	89
A Study of Communicative Function in Demented PD Patients	90
Individuals with PD and Dementia Compared with Individuals with AD on the ABCD	91
Discourse Sample of PD Patient with Dementia	91
Relation of PDD, Dementia with Lewy Bodies, and AD	92
Summary of Important Points	92
References	93

8	Dementia and Lewy Body Disease	99
	Lewy Body Disease	99
	Diagnostic Criteria and Symptomatology	100
	Consortium Consensus Criteria for Diagnosis of Dementia	102
	Caregiver Report of Early Symptoms	102
	LBD Risk Factors	102
	Effects of LBD on Cognition	103
	Executive Function and Attention	103
	Visuoperceptual and Spatial Functions	103
	Memory	104
	Language and Communicative Function	104
	A Case of Pure LBD	105
	Summary of Changes in Communicative Functioning	106
	Cognitive Profile of LBD Compared with AD	106
	Cognitive Profile of LBD Compared with PDD	106
	Summary of Important Points	107
	References	107
9	Dementia and Huntington's Disease	113
	Overview and Genetics of Huntington's Disease	113
	Neuropathology of HD	114
	Symptomatology	114
	Affect and Motor Symptoms	114
	Effects of HD on Speech	114
	Effects on Cognition	115
	Language	116
	Dysphagia Is Also a Concern	118
	Cognition and Communication	118
	Summary of Important Points	119
	References	119
10	Frontotemporal Dementia	123
	Introduction	123
	Diagnosis of Frontotemporal Dementia (FTD)	124
	Behavioral Presentation	124
	Behavioral Variant Frontotemporal Dementia (bvFTD)	124
	Language Presentation of FTD: Primary Progressive Aphasia	127
	Variants of PPA	127
	Differentiating the Behavioral Variant of FTD from the Primary Progressive Aphasia Variants	131
	Amyotrophic Lateral Sclerosis and FTD	131
	Effects of ALS-FTD on Language	132
	Summary of Important Points	132
	References	133

Clinical Management Guide: Assessments and Interventions for Cognitive-Communication Disorders of Dementia

I	Assessment	141
	Introduction	141
	Assessment Procedures that Produce Valid and Reliable Data	141
	Prior to Testing	141
	Be Alert to Depression	143
	Be Alert to Drug Effects on Performance	143
	Know the Criteria for Diagnosing MCI and Dementia	144
	Severity of Cognitive Impairment Affects Test Selection	145
	Tests for Diagnosing MCI and Dementia	146
	Arizona Battery for Communication Disorders of Dementia (ABCD-1) aka Arizona Battery for Cognitive-Communicative Disorders (ABCD-2)	146
	ABCD-2 Subtests Most Sensitive to Mild AD	153
	Functional Linguistic Communication Inventory (FLCI) for Moderately and Severely Demented Individuals	153
	Many Other Tests Are Available for Diagnosing MCI and Dementia	154
	Broad-Based Assessments	155
	Short Screening Tests	157
	What About Aphasia Test Batteries?	157
	ADAS-COG: Widely Used in Drug Trials	158
	Differentiating the Types of Dementia	158
	Differentiating MCI and Mild Dementia from Delirium and Depression	158
	Differentiating Frontotemporal Dementias (FTD)	159
	Differentiating Primary Progressive Aphasia (PPA) and Mild AD	161
	An Assessment for Differentiating Semantic Dementia: The Cambridge Semantic Memory Test	162
	Differentiating AD from Vascular Dementia	163
	Differentiating Mild AD from Dementia with Lewy Bodies (DLB) and Parkinson's Disease with Dementia (PDD)	165
	Summary of Important Points	166
II	Cognitive Intervention	169
	A Treatment Model for Successful Clinical Intervention	169
	Cognitive Intervention for Mild Cognitive Impairment (MCI)	169
	Cognitive Reserve is "Neuroprotective"	170
	Cognitive Intervention Strengthens Cognitive Reserve	170
	Make Treatment Person Centered	171
	Suggestions for How To Make Therapy Person Centered	172
	Target Skills and Behaviors that Have the Potential to Improve	172
	Provide Individual and Group Therapy	172
	Provide Training of Strategies that Can Improve Function	173

Use Repetition and Repeated Retrieval to Create and Strengthen New Learning	174
Computer-Based Training	175
Include Neuro-Proactive Education for Clients About Physical, Mental, and Social Health	176
Provide Opportunities to Support Communicative Engagement and Socialization	177
Ensure that Duration of Treatment Is Sufficient to Strengthen Skills and Create Learning	178
Use Objective and Subjective Measures of Skill Strength and Learning	179
Looking Forward	180
III Treatment: Direct Interventions for Individuals with Mild Cognitive Impairment and Dementia	181
Introduction	181
Clinical Strategies Supported by Neuroscience	181
Strategy: Provide Stimulation Related to Client's Needs	181
Strategy: Personalize Tasks by Giving Clients Choices	182
Strategy: Involve Multiple Modalities	182
Strategy: Avoid Having Clients Multitask	184
Strategy: Engage Clients through Self-Generation	185
Strategy: Control Task Complexity	185
Strategy: Work within Schemas to Increase Knowledge and Facilitate Retrieval	187
Strategy: Use Stimuli that Evoke Positive Emotion	188
Strategy: Use Reminiscence to Stimulate Recall, Engage Attention, and Elicit Emotion	188
Strategy: Design Stimulation to Reduce Errors	189
Strategy: Use Repetition to Produce Durable Memory	191
Repeated Retrieval: A Potent Form of Repetition that Profoundly Affects Learning	191
Spaced Retrieval: Retrieval of Information or Actions Over Increasingly Longer Intervals	192
Strategy: Elaborated Encoding Produces Stronger Memory	194
Strategy: Use Priming to Facilitate Memory and Increase Knowledge	194
Strategy: Use Reward to Sustain Attention, Increase Frequency of Desired Response, and Elicit Positive Emotion	196
Strategy: Provide Education About How Sleep, Diet, and Exercise Support Neuroplasticity and Cognition	196
Summary: Science and Clinical Practice	198

IV	Indirect Interventions for Individuals with Dementia	199
	Overview	199
	Linguistic Modifications	199
	Improving Language Comprehension	199
	Improving Language Production	202
	Environmental Modifications	205
	Facilitate Perception of Stimuli	205
	Vision and Aging	205
	Managing Problems with Vision to Facilitate Learning	206
	Color and Vision	207
	Hearing and Aging	208
	Facilitating Mood and Behavior	209
	Provide Something to Nurture	210
	Reduce Verbal Perseveration and Disruptions	210
	The Environment Should Promote Safety	211
	Technologies to Support Cognition and Communication	211
	Technologies to Support Memory	212
	Technologies to Support Engagement	212
	Technologies to Support Safety and Independence	213
	Support of Feeding	214
	Caregiver Education and Support	214
	Health Risks of Caregiving	215
	Gender and Caregiving	216
	Family Strife and Violence	216
	Factors that Influence Caregiver Burden and Stress	217
	Ethnic Minority Groups and Caregiver Burden	217
	Family Counseling	219
	Culture Matters in Counseling	219
	Emphasize What the Patient Can Do	220
	Caregiver Education and Training	221
V	Reimbursement and Care Planning for Persons with Dementia	223
	Introduction	223
	Federal Law Mandates Care	223
	Medicare's Comprehensive Assessment	223
	Minimum Data Set	224
	Care Area Assessment (CAA) Process	224
	Centers for Medicare and Medicaid Services	225
	Role of the SLP	225
	A Relevant Question	226
	Can SLPs Be Reimbursed for Cognitive Therapy?	226
	Medicare Review Threshold for Therapy Claims	227
	Using Test Performance to Develop Treatment Plans	227
	Planning Intervention	227

A Case-Based Example of a Restorative Care Plan	228
A Case-Based Example of a Maintenance Program	232
Documentation Is Critical	234
Evaluation and Plan of Care	234
Progress Notes	234
Treatment Encounter Notes	234
Documentation Pitfalls	235
Synopsis	235
<i>References for Clinical Guide</i>	237
<i>Index</i>	259
