Dedications	v
Acknowledgment	vii
Preface	xiii
<b>Chapter 1: Basic Principles of Resistance Training and Exercise Prescriptions</b>	<b>1</b>
Maximal Muscular Contractions	4
Intensity	5
Volume of Training	5
Variation of Training	6
Progressive Resistance Exercise	6
Rest Periods	7
Speed Specificity	7
Contraction Specificity	8
Muscle Group Specificity	8
Energy Source Specificity	8
Safety Aspects of Lifting	9
<b>Chapter 2: Types of Strength Training</b>	<b>13</b>
Isometrics	16
Dynamic Constant Resistance	20
Eccentric Training	27
Variable Resistance	29
Isokinetics	31
Comparisons of Types of Training	39
<b>Chapter 3: Individualizing Exercise Prescriptions in Resistance Training</b>	<b>47</b>
Needs Analysis	51
Acute Program Variables	55
Chronic Program Manipulations	66
Administrative Concerns	69
Case Study Exercise Prescriptions	74

**Chapter 4: Systems of Resistance Training 83**

Single Set System	86
Multiple Set System	87
Bulk System	87
Light-to-Heavy System	87
Heavy-to-Light System	88
Triangle Programs	90
Super Set System	91
Circuit Program	91
Peripheral Heart Action System	92
Tri-Set System	93
Multi-Poundage Systems	93
Cheat System	93
Split Routine System	94
Blitz Program	95
Isolated Exercise System	95
Exhaustion Set System	96
Burn System	96
Forced Repetition System	96
Super Pump System	97
Functional Isometrics	97
Double Progressive System	98
Comparison of Various Systems	99

**Chapter 5: Resistance Training's Relationship to Other Fitness Components 103**

Aerobic Training and Exercise Prescription	106
Compatability of Endurance Training	110
Flexibility and Resistance Training	112
Anaerobic Sprint and Interval Training	116
Integrating the Fitness Components	119

**Chapter 6: Muscle Physiology 121**

Neuromuscular Considerations	123
Sliding Filament Theory	129
Bioenergenics	135
Muscle Fiber Types	141
Proprioceptors	144

**Chapter 7: Training Adaptations 149**

Muscle Enlargement	151
Body Compositional Changes	153
Neural Factors	157
Oxygen Consumption	162
Fuel Availability to the Energy Sources	163
Enzymatic Changes	164
Hormonal Responses	165
Cardiovascular Adaptations	169
Muscle Contraction Time	172
Connective Tissue	172

Bone Density	174
Prevention of Injuries	174
<b>Chapter 8: Detraining</b>	<b>177</b>
Strength Loss	179
Muscle Fiber Responses	181
Aerobic Fitness	183
Physiological Detraining Summary	184
Detraining the Bulk-Up Athlete	184
<b>Chapter 9: Women and Resistance Training</b>	<b>187</b>
Sex Differences in Strength	189
Training Effects	191
Misconceptions about Women and Resistance Training	192
Menstrual Cycle Irregularities	196
Needs Analysis	198
<b>Chapter 10: Children and Resistance Training</b>	<b>201</b>
Skeletal System Damage	203
Back Problems	205
Strength Gains	206
Programs for Children	208
<b>Chapter 11: Resistance Training Sports</b>	<b>213</b>
Body Building	216
Power Lifting	224
Olympic Lifting	229
Closing Word to All Lifters	233
References	235
Index	261
