Preface — V

Georgios Lampropoulos and Stamatios Papadakis

Maker education and educational robotics in the age of artificial intelligence — 1

Rina Zviel-Girshin and Nathan Rosenberg

Making to engineering: toward a personalized engineering robotics playground — 9

Ana Carolina Carius and Felipe de Oliveira Baldner

Maker movement and educational robotics in Brazil: from legislation to emerging practices in the school environment — 45

Nerea López-Bouzas, Jonathan Castañeda Fernández,
and M. Esther del Moral Pérez

Robotics and computational language in the school setting: a review of research — 59

Daniela Conti, Carla Cirasa, and Santo F. Di Nuovo

The use of psychological measurements in research on educational robotics — 85

Rita Cersosimo and Valentina Pennazio

Promoting social communication skills in autism spectrum disorder through robotics and virtual worlds — 95

Bettina Trixler and Henriette Pusztafalvi

Robots for autism-specific education: opportunities and barriers to the use of technical devices — 119

Juan-Francisco Álvarez-Herrero

Proposal for intervention with intelligent educational robots in primary education students after the analysis of their pedagogical possibilities — 131

Pedro Baena-Luna and Esther García-Río

New realities in the education field? Keys to understanding the role of intelligent educational robots — 149

Hızır Dinler

Intelligent Educational Robots in Early Childhood Education: Building the Future — 169

Barbora Stenová, Karolína Miková, and Lucia Budinská

Interactivity of smart educational robots — 199

Ela Luria

Exploring the use of chatbots in English language learning among higher education students in Israel — 213

Svetlana Sharonova and Elena Avdeeva

Model of a teacher from the standpoint of ethics in education using artificial intelligence — 233

Chrissa Papasarantou, Dimitris Alimisis, and Elias Theodoropoulos

The AI-enhanced DIY robotic car: introducing the five big ideas of AI — 245

List of contributors — 263
