Preface	xvii	
1. Introduction to the molecular basis and analysis of ligand-receptor interactions	1	
<i>Tewin Tencomnao</i>		
1.1 Introduction	1	
1.2 ROS signaling in plants	1	
1.3 Calcium signaling in plants	1	
1.4 Interplay between ROS and calcium signaling	2	
1.5 Hormonal signaling pathways in stress response of plants	2	
1.6 Future perspectives	3	
References	4	
2. Cell signaling mediated by plasma membrane-bound receptors in plants	7	
<i>Krishna K. Guduru</i>		
2.1 Introduction	7	
2.2 The significance of plasma membrane-resident upstream cellular receptors toward growth, development, and defense in plants	8	
2.3 The significance of RLKs and RLPs toward growth and development in plants	8	
2.4 The significance of RLKs and RLPs toward defense in plants	13	
2.5 SERKs acts as co-receptors for ligand binding receptor complexes	13	
2.6 The significance of SERKs toward growth and development in plants	14	
2.7 The significance of SERKs toward defense in plants	14	
2.8 The significance of DAMPs toward defense in plants	14	
2.9 The significance of PAMPs toward defense in plants	17	
2.10 The significance of plasma membrane-resident downstream cellular receptors toward growth, development, and defense in plants	17	
2.11 RLCKs relaying as signal transmitters for intracellular receptor complexes	17	
2.12 The significance of RLCKs toward growth and development in plants	17	
2.13 The significance of RLCKs toward defense in plants	17	
2.14 MAPK cascade – Center for an intracellular receptor complexes	21	
2.15 The significance of MAPK cascades toward growth and development in plants	21	
2.16 The significance of MAPK cascade toward defense in plants	21	
2.17 The significance of NB-LRR proteins toward growth, development, and defense in plants	22	
2.18 Concluding remarks	22	
References	22	
3. Histidine kinase receptors and two-component signaling in driving developmental and environmental stress responses in plants	31	
<i>Dhruvi Vaish, Aanvi, Rakshit Vyas and Ram Singh Purty</i>		
3.1 Introduction	31	
3.2 Histidine kinase receptor in plants	31	
3.3 Diversity in the histidine kinase structure	33	
3.4 Role of histidine kinase in plants	34	
3.4.1 Cytokinin signaling	34	
3.4.2 Ethylene signaling	35	
3.4.3 Histidine kinase as osmosensor	36	
3.5 Future directions and challenges	37	
3.6 Conclusion	38	
Author's contribution	38	
Conflict of interest	38	
Consent for publication	38	
Acknowledgment	39	
References	39	

4. Auxin receptors: Pivotal regulators of plant development	43	6. Signal transduction pathways mediated by membrane-bound and endoplasmic reticulum-localized cytokinin receptors	81
<i>Manobika Das, Shabari Sarkar Das and Ananda K. Sarkar</i>		<i>Amandeep Singh, Pooja Sharma, Shruti Kaushik, Jaspreet Kour, Prakriti, Anchita Thakur, Alisha Sharma, Nahida R. Mir, Manu Sharma, Puja Ohri, Nitika Kapoor and Renu Bhardwaj</i>	
4.1 Introduction	43	6.1 Introduction	81
4.1.1 Auxin perception and type of auxin receptors	44	6.2 The cytokinin receptors	81
4.1.2 TIR1: Primary auxin receptor	44	6.2.1 Discovery of Cytokinin Receptors	82
4.1.3 ABP1 as a potential auxin receptor	44	6.2.2 Types of Cytokinin Receptors	82
4.1.4 TMK and ABL resolves ABP1 controversy	46	6.3 Cytokinin primary response gene	84
4.1.5 Molecular nature of TIR1 as auxin receptors	47	6.3.1 Type-A Arabidopsis response regulator gene	84
4.1.6 Structural features of ABP1 and relevance	49	6.3.2 Type-B Arabidopsis response regulators	85
4.1.7 Evolution of auxin receptors	49	6.3.3 Type-A ARRs: Negative regulators of cytokinin signaling	87
4.1.8 Evolution of TIR1/AFB	50	6.3.4 Other functions	87
4.1.9 Evolution of ABP1	50	6.4 Histidine phosphotransfer proteins in Arabidopsis	87
4.1.10 Auxin response family members	50	6.5 Signal transduction pathway	88
4.2 Canonical auxin signaling mechanism	53	6.6 Signal transduction pathways involved in various cytokinin-regulated physiological responses	89
4.2.1 TIR/AFB-mediated auxin signaling	53	6.6.1 Root apical meristem	89
4.2.2 TIR1 mediated degradation of AUX/IAA	53	6.6.2 Root stem cell specification	90
4.2.3 Transcriptional activation of auxin-responsive genes	53	6.6.3 Nodule proliferation	90
4.2.4 Noncanonical auxin signaling	54	6.6.4 Leaf senescence	90
4.2.5 Perception of auxin by ABP1	54	6.6.5 Cell division	90
4.2.6 Cytoplasmic auxin signaling occurs through ABP1	55	6.7 Conclusion and future perspectives	91
4.3 Conclusion and future perspective	55	References	91
Acknowledgment	56		
References	56		
5. Gibberellin receptors regulating cell signaling in plants	63	7. Membrane-bound and endoplasmic reticulum-mediated cytokinin signaling: An update on abiotic stress responses	95
<i>Ankur Singh, Subhransu Panda, Sumali Sucharita and Aryadeep Roychoudhury</i>		<i>Deepali Verma and Rashmi Shakya</i>	
5.1 Introduction	63	7.1 Introduction	95
5.2 Role of Gibberellin in plants	63	7.2 Membrane-bound cytokinin receptor and signaling pathway	96
5.2.1 Vegetative development	64	7.3 Cytokinin signaling pathway through the endoplasmic reticulum	97
5.3 Gibberellin receptor in plants	66	7.4 Cytokinin response/signaling under abiotic stress	99
5.4 Gibberellin biosynthesis and catabolism	68	7.4.1 Drought/osmotic stress	99
5.5 Gibberellin signaling components identified by Gibberellin response mutants	69	7.4.2 Light stress	100
5.5.1 Positively acting components	69	7.4.3 Temperature stress	102
5.5.2 Negatively acting components	71	7.4.4 Salt stress	103
5.6 Gibberellins in signaling	72	7.4.5 Nutrient stress	104
5.7 Conclusion and future outlook	73	7.5 Conclusion	105
References	73	References	105

8. Regulations and functions of multiple ethylene receptors in plant development and stress response 111

Muhammad Umar, Faiza Munir, Nimra Ghafoor, Ramsha Tariq, Rabia Amir and Alvina Gul

- 8.1 Introduction 111
- 8.2 Multiple ethylene receptors: A diverse family 112
- 8.3 Ethylene receptors: Structure and function 113
- 8.4 Regulation of ethylene receptors 115
 - 8.4.1 Post-translational modifications 116
 - 8.4.2 Signaling cascade in presence and absence of ethylene 116
- 8.5 Functions of multiple ethylene receptors in plant development 116
 - 8.5.1 Ethylene role in seed germination 116
 - 8.5.2 Ethylene role in root hair development and leaf and flower senescence 116
 - 8.5.3 Ethylene-mediated responses to shade crowding and fruit ripening 116
- 8.6 Functions of multiple ethylene receptors in stress response 117
 - 8.6.1 Function of *Rosa hybrida* ethylene receptor 3 (RhETR3) 117
- 8.7 Conclusion 119
- References 120

9. Structure and function of diverse abscisic acid receptors and coreceptors in modulating developmental and stress responses 125

Radha Shivhare and Charu Lata

- 9.1 Introduction 125
- 9.2 Identification of abscisic acid receptors 126
- 9.3 The core component of abscisic acid signaling in plants 127
- 9.4 Post-translational modifications of abscisic acid signaling components 128
 - 9.4.1 Ubiquitination and deubiquitination 128
 - 9.4.2 Ubiquitination of abscisic acid receptors 129
 - 9.4.3 Phosphorylation of abscisic acid core components 130
- 9.5 The role of abscisic acid in development and abiotic stress responses 131
 - 9.5.1 Regulation of dormancy and germination 132

- 9.5.2 Regulation of stomatal closure 133
- 9.5.3 Regulation of leaf senescence 133
- 9.5.4 Regulation of drought-responsive gene expression 133
- 9.5.5 Heavy metal stress 134
- 9.5.6 Ultraviolet-B stress 135

9.6 Conclusion and perspectives 135

References 136

10. Jasmonic acid receptors: Gatekeepers of plant defense and development 143

Saravanappriyan Kamali and Amarjeet Singh

- 10.1 Introduction 143
- 10.2 The discovery of jasmonic acid receptors 143
- 10.3 Structure of COI1 and the SCF-COI1 complex 144
 - 10.3.1 COI1: An F-box protein 144
 - 10.3.2 SCF-COI1 complex assembly 144
 - 10.3.3 Leucine-rich repeat domain 144
 - 10.3.4 Interaction with jasmonate ZIM-domain proteins 144
- 10.4 Role of inositol polyphosphate in jasmonic acid receptor complex 144
 - 10.4.1 Evolutionary insights of jasmonic acid receptors 145
- 10.5 Structural mechanism of COI1-JAZ interaction 146
- 10.6 Two distinct modes of action in the COI1-JAZ co-receptor system 146
- 10.7 The role of jasmonic acid receptors in plant defense 146
- 10.8 Jasmonic acid receptors in plant development 147
 - 10.8.1 Regulation of root growth 147
 - 10.8.2 Impact on flower development and fertility 148
 - 10.8.3 Involvement in senescence 148
- 10.9 Conclusion and future prospects 149
- Acknowledgment 149
- References 149

11. Receptor dynamics of salicylic acid and jasmonic acid in plant signal transduction 151

Fakhra Altaf, Raza Kaleem, Safia Bibi, Rabia Amir, Alvina Gul, Faiza Munir, Bengu Turkyilmaz Unal and Munir Ozturk

- 11.1 Introduction 151
- 11.2 Biosynthesis of SA 152

11.3	Pathways for SA biosynthesis in plants	152	11.21	Interplay of phytohormones: Crosstalk unveils	163
11.3.1	The phenylalanine ammonia-lyase pathway	152	11.22	Conclusion and prospects	163
11.3.2	The isochorismate pathway	152	References		164
11.4	Fine tuning of SA	152	12.	Brassinosteroid receptors as multidimensional regulators in brassinosteroid perception, plant growth, and stress adaptation	169
11.5	Receptors of SA	153		<i>Mohd Ali, Deepak Kumar, Parkirti, Alisha Sharma, Roohi Sharma, Anchita Singh, Manu Sharma, Nahida Rehman Mir, Arun Dev Singh, Mohd Ibrahim, Nitika Kapoor, Renu Bhardwaj and Puja Ohri</i>

26. Mechanoperception and mechanoreceptors in plant systems 381

Santanu Samanta and Aryadeep Roychoudhury

26.1	Introduction	381
26.2	Rapid or instant responses to mechanostimulation	381
26.2.1	Touch-me-not (<i>Mimosa pudica</i>)	382
26.2.2	Insect-trapping plants	382
26.3	Slow yet robust responses to mechanostimulation	383
26.3.1	Ca ²⁺ oscillation and generation of ROS	383
26.3.2	Involvement of phytohormones	383
26.3.3	Transcriptional alteration	385
26.4	Molecular mechanisms of mechanoperception in plants	385
26.4.1	Mechanosensing through mechanosensitive ion channels	386
26.4.2	Mechanosensing through transmembrane receptor kinases	388
26.5	Concluding remarks	390
Acknowledgments		390
