<i>Foreword</i>		vii
<i>Preface</i>		ix
<i>About the Author</i>		xi
1. Introduction		1
1.1 Science, Models and Maths		1
1.1.1 Forces to be reckoned		2
1.1.2 A wider world of examples		2
1.1.3 Learn to build models		3
1.1.4 Master mathematics		3
1.1.5 Learn to code dynamic computer simulations		4
1.1.6 The power of context		5
1.2 The Style and Structure of <i>Science by Simulation</i> (Volume 1)		5
1.2.1 Chapter synopsis for <i>A Mezze of Mathematical Models</i>		6
1.2.2 This doesn't look like a science book		8
1.3 Election Cups		10
1.3.1 Context		10
1.3.2 Election Cups model of sinking time vs hole diameter		11
1.3.3 Analysis of Election Cups		16
1.4 Snails of Pursuit		18
1.4.1 Context		18
1.4.2 Modelling the snails of pursuit		18
1.5 Summary		23

2.	The Epidemiology of Eyam	25
2.1	Introduction and Context	25
2.1.1	The great plague reaches Eyam	25
2.1.2	William Mompesson's parish records constitute epidemiological data for a closed system	26
2.1.3	Context for the introduction of mathematical modelling methods	27
2.1.3.1	Modelling population flows using coupled differential equations	27
2.1.3.2	Solving the Eyam equations	28
2.1.3.3	Plotting, linearising and parameter estimation	28
2.1.3.4	Model fitting using a graphical user interface	30
2.2	A S, I, D, R Model of the Plague Epidemic in Eyam	31
2.2.1	A simple epidemiological model	31
2.2.2	The Eyam equations	33
2.2.3	Solution of the Eyam equations via the iterative Euler method	34
2.2.4	The ups and downs of I	37
2.2.5	A problem of initial conditions	38
2.2.6	Solving the Eyam equations using a 'semi-analytic approach'	40
2.2.7	Eyam equation solution summary	42
2.2.8	The K&K approximate solution to the Eyam equations	43
2.2.8.1	The K&K approximation of $\tau(z)$	43
2.2.8.2	Evaluation of the K&K model	46
2.2.8.3	Problems with the K&K approach	47
2.2.9	A semi-analytic solution to the Eyam equations with η instead of ρ	47
2.2.9.1	The problem with ρ	47
2.2.9.2	Replacing with ρ with η	47
2.2.9.3	Eyam equation solver via and a GUI	49
2.2.9.4	Sum of squared differences	50
2.2.9.5	Optimising $t_{\max}, I_{\max}, \alpha, \eta$	50
2.3	Applying the Eyam Equations to Ebola	51
2.4	The Importance of Basic Reproduction Number R_0	53
2.5	A Stochastic Version of the Eyam Model	56
2.5.1	Two problems with the Euler Eyam equations	56
2.5.2	A stochastic Eyam model as a Poisson process between time steps	56

2.5.2.1	Generating random integers from discrete probability distributions	58
2.5.2.2	Combining the Euler and Poisson Eyam models	59
2.6	Applying the Eyam Equations to COVID-19	62
2.6.1	The coronavirus pandemic in 2020	62
2.6.2	Infographics should match the narrative	63
2.6.3	Can the Eyam equations model COVID-19?	64
2.6.4	Why I is more useful than R_0	68
2.6.5	Summary	69
2.7	A Physical Representation of the Eyam Model	70
2.8	Extensions to the Eyam Model to More Accurately Model the Black Death Pandemic	71
2.8.1	<i>Bubonic, pneumonic and septicaemic</i> plague	71
2.8.2	<i>Quaranta giorni</i>	71
2.8.3	Variolation, vaccination and modern medicine	72
3.	Holmes and Watson Meet Bayes	73
3.1	The Calculus of Chance	73
3.2	Probability, Hypotheses and Tests	73
3.3	Diseases, Tests and Conditional Probability	74
3.4	Tree Diagrams and Bayes' Theorem	75
3.5	A Proof of Bayes' Theorem Using Venn Diagrams	78
3.6	An Inversion of Bayes' Formula	80
3.7	A Simulation Involving Bayesian Inference	82
3.7.1	Bayes urns its keep, making use of the binomial distribution	82
3.7.2	A computer simulation of the binary urn problem	86
3.8	The Influence of Inference	87
4.	May's Chaotic Bunnies	89
4.1	What Is Chaos?	89
4.2	The Link Between Chaos and Nonlinearity	91
4.3	May's Bifurcating Bunnies	92
4.3.1	May's logistic equation	92
4.3.2	A logistic map of May bifurcations	94
4.3.3	Why must $r \leq 4$?	96
4.3.4	Solving for a single asymptotic value of x	96
4.3.5	Describing $x(r)$ for the first bifurcation	97
4.3.6	The logistic map is a fractal	100
4.4	The Need for Numerical Methods and Nonlinearity	102

5.	Pendulums, Poincaré Diagrams and Strange Attractors	103
5.1	A Phase Portrait of the Possible Trajectories of a Dynamical System	103
5.2	Poincaré's Pendulum	103
5.3	The Double Pendulum	107
5.4	Lorenz and Rössler Strange Attractors	113
5.5	The Attraction of Attractors and Geometric Order from Chaos . .	116
6.	A Standard Atmosphere	117
6.1	An Onion Skin Paradise	117
6.2	The International Standard Atmosphere	117
6.3	Variation of Atmospheric Pressure vs Altitude	118
6.3.1	Special case #1: Isothermal atmosphere $T = T_0$, zero humidity	122
6.3.2	Special case #2: Constant, but non-zero, lapse rate L , zero humidity	122
6.4	The Effect of Humidity	123
6.4.1	Variation of atmospheric density with temperature, pressure and humidity	123
6.4.2	Effect of humidity upon lapse rate	125
6.4.3	Variation of dew point with temperature	125
6.4.4	Variation of water boiling point with atmospheric pressure	126
6.4.5	A humid atmosphere model of the troposphere	126
6.5	Raise the Standard, and Embrace Empiricism	129
7.	The Subtlety of Rainbows	131
7.1	Arts and Science, Not Versus	131
7.2	Descartes' Theory of the Rainbow	132
7.2.1	Assumptions	132
7.2.2	The primary rainbow	134
7.2.3	A double rainbow	137
7.2.4	Variation of refractive index for water with frequency of light	139
7.2.5	Using n vs frequency to determine the elevation of the primary and secondary rainbows	141
7.2.6	Rainbow arcs and the angle of the anti-solar direction . . .	142
7.2.7	Higher-order rainbows	143
7.3	Coda	144

8.	Exploring Julia's Fractals	147
8.1	The Fractal Geometry of Nature	147
8.2	Mandelbrot Fractals	147
8.3	Complex Numbers and de-Moivre's Theorem	155
8.3.1	Real and imaginary numbers	155
8.3.2	Complex roots	157
8.3.3	The easy powers of de-Moivre's theorem	157
8.4	Proof of de-Moivre's Theorem	160
8.5	Making It Complex Can Make It Simpler	161
9.	Radar, Chirps and Phased Arrays	163
9.1	Seeing with Microwaves	163
9.2	The Radar Equation	166
9.3	The Phased Array Antenna	170
9.3.1	A linear array	170
9.3.2	A 2D phased array	172
9.4	Chirps and Matched Filtering	173
9.4.1	Linear chirp	173
9.4.2	Matched filter	177
10.	Navigating the Sphere	181
10.1	Eratosthenes of Cyrene Calculates the Radius of the Earth	181
10.2	Al-Biruni of Khwarezm Improves Upon the Method of Eratosthenes	182
10.3	Solving the Horizon Problem	185
10.4	A Choice of Coordinates to Navigate the Sphere	186
10.4.1	Earth centred GEN and spherical polars (range, latitude and longitude)	186
10.4.2	Drawing circles on a sphere	187
10.4.3	Great circle minor arc between two points on a sphere	191
10.4.4	The 'Death Star' problem – defining a parabolic indent or cap on a sphere	192
10.5	Why Navigate the Sphere?	194
11.	Modelling Money and Mortgages	195
11.1	Context: A British Housing Crisis	196
11.2	Fixed Rate Mortgages	199
11.3	Regular Monthly Payment Savings and Investment Accounts	203
11.4	Save and Buy, or Buy, Rent, Sell, Buy?	207
11.5	A Simple Stock-Trading Model	209

12.	Power to the People	217
12.1	A Very Short Guide to UK General Elections and Parliament	218
12.2	An Analysis of UK General Elections 2010–2019	220
12.2.1	Data sources, and raw data vs information	220
12.2.2	Methodology	221
12.2.3	Data ingest: Excel spreadsheets to MATLAB arrays	222
12.2.4	Data analysis and automated infographic production	223
12.2.5	Could FPTP be replaced by PR?	229
12.3	Conclusion	236
	section.12.3	

Appendix A:	Linear Regression – Determining Lines of Best Fit	237
A.1	Fitting $y = mx + c$	237
A.2	Fitting $y = mx$	241

Appendix B:	Using the Runge–Kutta Method to Solve the Pendulum Problem	243
B.1	The Runge–Kutta Method of Solving Ordinary Differential Equations	243
B.2	Single Pendulum with Air Resistance	244
B.3	Double Pendulum without Air Resistance	244
