Introduction xxi

## **PART I Introduction to the Solid Earth System 1**

---

<b>1</b>	<b>AN EXPLORATION OF BASIC SOLID EARTH STRUCTURE AND DYNAMICS</b>	<b>3</b>
1.1	Topography	3
1.1.1	Isostasy	6
1.2	Geopotentials: Shape, spin, and geoid	10
1.2.1	Gravitational potential	10
	<b>Expanded details 1:</b> Moments of inertia and geopotentials of an ellipsoidal Earth	12
1.2.2	Reference geoid, spin, and the Earth-Moon system	16
1.2.3	Geoid and gravity anomalies	17
	<b>Expanded details 2:</b> Geoid, spherical harmonics, and gravity anomalies	18
1.3	Internal structure, temperature, and composition of Earth	22
1.3.1	1-D structure of Earth as seen from seismology	22
1.3.2	Pressure and mass within the Earth	24
1.3.3	Complexities in the 1-D model	25
1.3.3.1	The lithosphere and its topography	25
1.3.3.2	The asthenosphere	27
1.3.4	Thermal background state of the mantle	28
	<b>Expanded details 3:</b> Thermodynamics of the adiabatic mantle temperature gradient	29
1.3.5	Composition and mantle phase transitions	32
1.4	Plate motions in the past and at present	34
1.4.1	Seafloor spreading and seafloor age	35
	<b>Expanded details 4:</b> Rikitake dynamo, magnetic field creation, and chaos	38
1.4.2	Current plate motions	42
1.4.2.1	Absolute reference frames and net rotation	42
1.4.2.2	Poloidal and toroidal flow	45
1.4.3	Plate motion reconstructions	47
1.5	Seismic tomography—3-D mantle structure	50
	Review questions and discussion topics 1	54

**PART II Fundamental Physics** 57

<b>2</b>	<b>CONTINUUM MECHANICS</b>	59
2.1	Concept of a continuum	59
2.2	Displacements, velocities, and reference frames	61
2.2.1	Reference frames for considering deformation of a continuum	63
2.2.1.1	Lagrangian reference frame	63
2.2.1.2	Eulerian reference frame	63
2.3	Strain	64
2.3.1	Displacement gradient tensor	68
2.3.2	Strain rates	69
2.3.3	Finite strain	70
2.4	Forces and stress	72
2.4.1	Sign convention for stress	72
2.4.2	Cauchy stress tensor	72
2.4.3	Static force equilibrium and stress tensor symmetry	73
2.4.4	Principal axes of the stress tensor	75
2.4.5	Pressure and deviatoric stress	76
<b>Expanded details 5: Tensor invariants and measures of stress</b>		79
2.4.6	Stress in two dimensions	81
2.4.7	Pure shear and simple shear	82
2.4.8	Continuity of stress tensor components	83
<b>Exercise 1: Strain, strain rates, and stress</b>		84
2.5	Constraining crustal deformation and stress	84
2.5.1	Moment tensors and the gCMT catalog	84
<b>Expanded details 6: Non-double-couple moment tensor deformation</b>		87
2.5.2	Seismic coupling and seismotectonics	89
2.5.3	Crustal strain-rate fields from geodesy	91
2.5.4	Constraints on stress within the lithosphere	92
2.5.5	Stress vs. strain from focal mechanisms	93
Review questions and discussion topics 2		94
<b>3</b>	<b>ELASTIC AND BRITTLE BEHAVIOR OF ROCKS</b>	97
3.1	Constitutive laws	98
3.2	Elasticity	100
3.2.1	2-D elasticity, plane strain/stress	104
<b>Expanded details 7: Isotropic and anisotropic elasticity</b>		105
<b>Exercise 2: Stresses in the lithosphere</b>		107
3.2.2	Elastic flexure	110
3.2.2.1	Flexural profiles	110
3.2.2.2	Flexural vs. isostatic compensation	112
3.2.2.3	Gravity-topography ratios	114
3.3	Brittle failure	116
3.3.1	Fracturing and faulting	117
3.3.1.1	Griffith criterion and linear elastic fracture mechanics	117

- 3.3.2 Mohr-Coulomb failure and friction 119
  - 3.3.2.1 Byerlee's rule (or "law") 120
  - 3.3.2.2 Mohr's circle 122

---

**Exercise 3:** Byerlee's law applied to the lithosphere 124

---

- 3.3.2.3 Griffith cracks and fluid effects 125
  - 3.3.2.4 Shear cracks 126
  - 3.3.3 Fault zone structure 126
  - 3.4 Earthquakes and friction 130**
    - 3.4.1 Earthquake statistics 132
      - 3.4.1.1 Frequency-magnitude (Gutenberg-Richter) relationship 134
      - 3.4.1.2 Clustering: Omori's and Båth's laws 137
      - 3.4.1.3 Some implications of clustered seismicity 139
    - 3.4.2 Static and dynamic friction and the seismic cycle 139
      - 3.4.2.1 Elastic rebound and stick-slip cycles 140
      - 3.4.2.2 How regular are large earthquakes? 141
      - 3.4.2.3 Earthquake predictability 142
    - 3.4.3 Modeling and constraining coseismic deformation 144
      - 3.4.3.1 Screw dislocation in an elastic half-space 145
      - 3.4.3.2 Postseismic relaxation in a confined depth region 147
      - 3.4.3.3 Fault solution for two elastic layers 147
      - 3.4.3.4 Dislocation models for finite faults 148
      - 3.4.3.5 Tectonic space geodesy 152
    - 3.4.4 Earthquake source mechanics 153
      - 3.4.4.1 Constant stress drop scalings 155
- 
- Expanded details 8:** Rupture dynamics energy considerations and stress drop 156
- 
- 3.4.5 Rate and state friction as a constitutive law 159
- 
- Expanded details 9:** Physical processes behind rate-state friction 163
- 
- 3.4.5.1 Stability and limit cycles of an RSF spring slider 164
- 
- Expanded details 10:** Numerical implementation of rate-state friction equations 166
- 
- 3.4.5.2 Frictional stability in the lab and in nature 167
  - 3.4.5.3 Complex seismic cycles on simple faults 169
  - 3.4.6 Fault strength, stress, and heterogeneity 172

**Review questions and discussion topics 3 174**

## **4 VISCOUS, PLASTIC, AND TRANSIENT BEHAVIOR 175**

- 4.1 Newtonian fluids 175**
  - 4.1.1 Bulk viscosity and partial melting 177
  - 4.1.2 Viscous dissipation 179
- 4.2 Non-Newtonian fluids 179**
  - 4.2.1 Work hardening and work softening 180
  - 4.2.2 Plastic behavior 180
    - 4.2.2.1 Von Mises yield criterion 181
    - 4.2.2.2 Drucker-Prager criterion 182
  - 4.2.3 Strain and strain-rate-dependent weakening 183
- 4.3 Combined material behavior and transient viscoelasticity 184**
  - 4.3.1 Bingham viscoplasticity 184
  - 4.3.2 Two viscous dashpots in series 185

4.3.3	Viscoelastic behavior: The Maxwell body	185
	<b>Expanded details 11:</b> Derivation of the viscoelastic Maxwell body response	186
	<b>Expanded details 12:</b> Other viscoelastic transient models	189
<b>4.4</b>	<b>Attenuation and frequency-dependent moduli</b>	192
4.4.1	Attenuation for the standard linear solid	193
4.4.2	Q within the Earth	195
4.4.3	Temperature derivatives of seismic velocities	196
<b>4.5</b>	<b>Transient deformation throughout the seismic cycle</b>	199
4.5.1	Relaxation of an elastic plate over a viscous layer	200
4.5.2	Dislocation solution for a viscoelastic half-space	200
4.5.3	Earthquake cycle solution for a viscoelastic half-space	202
4.5.4	Postseismic response after earthquakes	202
	<b>Review questions and discussion topics 4</b>	206
<b>5</b>	<b>LITHOSPHERIC STRENGTH FROM COMPLEX ROCK RHEOLOGY</b>	207
<b>5.1</b>	<b>Microphysical mechanisms for viscous creep</b>	207
5.1.1	Pressure solution	207
5.1.2	Temperature dependence: The Arrhenius law	207
5.1.3	Diffusion creep	209
5.1.4	Dislocation creep	209
5.1.5	Mapping ductile crustal deformation	211
5.1.6	Laboratory-derived creep laws	213
5.1.7	Peierls creep/plasticity	216
	<b>Expanded details 13:</b> Fugacity and volatile concentration	217
	<b>Exercise 4:</b> Laboratory-derived creep laws	218
<b>5.2</b>	<b>Piezometers and grain size evolution</b>	221
	<b>Expanded details 14:</b> Grain size evolution laws	222
<b>5.3</b>	<b>Averaging of heterogeneous media</b>	224
5.3.1	Harmonic (weak) mean	224
5.3.2	Arithmetic (strong) mean	224
5.3.3	Geometric (intermediate) mean	225
5.3.4	Self-consistent averaging	225
<b>5.4</b>	<b>Deformation maps</b>	226
<b>5.5</b>	<b>Strength of the lithosphere and upper mantle</b>	228
5.5.1	Byerlee's law as a function of pressure	228
5.5.2	Brittle-ductile behavior	229
5.5.2.1	Oceanic plates	229
5.5.2.2	Continental plates	231
	<b>Review questions and discussion topics 5</b>	232
<b>6</b>	<b>TRANSFER OF MOMENTUM: FLUID DYNAMICS</b>	233
<b>6.1</b>	<b>Nondimensional numbers and flow regimes</b>	233
	<b>Expanded details 15:</b> Coriolis forces and geodynamo dynamics	235
	<b>Exercise 5:</b> Scaling analysis and nondimensional numbers	237

6.2	<b>Steady, unidirectional flow and the 1-D Stokes equation</b>	240
	<b>Expanded details 16:</b> Stokes (force balance) equation in 3-D	241
6.3	<b>Shear and pressure-driven flow</b>	243
6.3.1	Couette flow	243
6.3.2	Hagen-Poiseuille flow	244
6.3.3	Gravity-driven flow down a plane	245
6.4	<b>Density-driven flow: The Stokes sinker</b>	246
6.4.1	Stokes velocity	246
6.4.2	Rayleigh number from Stokes velocity and Peclet number	249
6.4.3	Dynamic topography of the Stokes sinker	249
	<b>Expanded details 17:</b> Role of viscosity variations for dynamic topography	251
6.5	<b>Stream function solutions</b>	252
6.5.1	Corner flow	253
6.5.2	Parabolic flow: Source in a uniform stream	254
6.5.3	Hale-Shaw flow and superposition	254
6.6	<b>Thin viscous sheets and gravitational potential energy</b>	255
6.7	<b>Postglacial rebound and glacial isostatic adjustment</b>	259
6.7.1	The Haskell constraint on mantle viscosity	260
6.7.1.1	Wavelength dependence of viscoelastic relaxation	262
	<b>Expanded details 18:</b> Glacial isostatic adjustment and sea level	266
	<b>Review questions and discussion topics 6</b>	267
<b>7</b>	<b>TRANSFER OF ENERGY: HEAT TRANSPORT</b>	269
7.1	<b>Conduction of heat and budgets</b>	270
7.1.1	Heat budgets and fractionation	272
7.1.1.1	Fractionation and rare earth elements	274
7.1.1.2	Total radiogenic budget of the mantle	275
7.1.1.3	Radioactive decay and time dependence of internal heating	276
7.2	<b>Diffusion of heat and the conduction equation</b>	277
7.2.1	Steady-state conduction solutions: Geotherms	279
7.2.1.1	Fixed surface temperature and heat flux	279
7.2.1.2	Fixed surface and base temperatures	280
7.2.1.3	Fixed surface temperature, constant flux at base	280
7.2.1.4	Fixed surface temperature, fixed deep flux	281
7.3	<b>Time-dependent solutions of the conduction equation</b>	282
7.3.1	Half-space cooling (HSC)	283
	<b>Expanded details 19:</b> Half-space cooling solution by separation of variables	284
	<b>Expanded details 20:</b> Periodic heating of a semi-infinite half-space	287
	<b>Exercise 6:</b> Finite difference solution of 1-D heat equation	289
7.3.2	Application of half-space cooling to the oceanic lithosphere	293
7.3.2.1	Oceanic plate bathymetry from HSC	294
	<b>Exercise 7:</b> Plate driving forces from half-space cooling	297
7.4	<b>Convection</b>	302
7.4.1	Instability analysis for the Rayleigh-Bénard problem	303

---

**Expanded details 21:** Linear instability analysis for Rayleigh-Bénard convection 304

---

- 7.4.1.1 Internal heating 308
- 7.4.2 Earth's mantle is convecting vigorously 309
- 7.4.3 Finite amplitude boundary layer model 310

---

**Expanded details 22:** Modified boundary layer models 312

---

- 7.4.3.1 Scaling laws for mantle convection 314
- 7.4.3.2 Layer thickness independence of heat flux in convection 314

---

**Expanded details 23:** Boundary layer instability and local Rayleigh number 315

---

- 7.4.4 Nondimensional equations and the Rayleigh number 316

---

**Review questions and discussion topics 7** 317

---

**8 MANTLE CONVECTION** 319**8.1 Numerical Rayleigh-Bénard convection experiments** 319

- 8.1.1 Role of internal heating 321

---

**Expanded details 24:** Compressibility and viscous heating 323

---

- 8.1.1.1 Top down or bottom up? 324
- 8.1.2 Earth's thermal initial condition 325
  - 8.1.2.1 Moon-forming impact 325

**8.2 Temperature and stress dependence of viscosity** 326

- 8.2.1 Approximations of rheological descriptions 326
  - 8.2.1.1 Partial melt parameterization 327
- 8.2.2 Temperature dependence and the stagnant lid 328
- 8.2.3 Non-Newtonian flow 331

---

**Expanded details 25:** Power-law based Rayleigh numbers 332

---

**8.3 Effect of phase transitions** 333

- 8.3.1 Kinetics, metastability, and multiminerality 336

**8.4 Effects of 3-D spherical geometry and toroidal flow** 337

- 8.4.1 Generation of toroidal flow 338

---

**Expanded details 26:** Generation of toroidal flow 341

---

**8.5 Plate-generating convection models** 342

- 8.5.1 Viscoplasticity to break the stagnant lid 342
  - 8.5.1.1 The low-yield stress problem 344
  - 8.5.1.2 Hysteresis of heat transport state? 346
- 8.5.2 The role of the asthenosphere 347
- 8.5.3 Effects of continents and the supercontinental cycle 347
- 8.5.4 Localization and memory: Rheological hysteresis 350

---

**Review questions and discussion topics 8** 354

---

---

**PART III Tectonics and Mantle Dynamics** 355

---

**9 GLOBAL MANTLE CIRCULATION** 357**9.1 The mantle wind: Predicting mantle flow** 357**9.2 Surface topography** 360

- 9.2.1 Residual and dynamic topography 361

9.2.2	Estimates of dynamic topography	362
9.2.2.1	Fréchet kernels	363
9.2.3	Residual vs. dynamic surface topography	365
<b>9.3</b>	<b>Time reversal of mantle convection</b>	<b>367</b>
<b>9.4</b>	<b>The geoid constraint on viscosity</b>	<b>368</b>
9.4.1	Venus, volatile storage capacity, and geoid-topography ratios	370
9.4.2	Typical viscosity profiles and nonuniqueness	371
<b>9.5</b>	<b>Plate driving and crustal deformation studies</b>	<b>372</b>
9.5.1	Plate driving forces	373
<hr/>		
	<b>Exercise 8: Modeling global mantle circulation with SEATREE</b>	<b>377</b>
9.5.2	Crustal stress and lithospheric deformation	380
9.5.3	Opportunities for model refinement	381
<b>9.6</b>	<b>Seismic anisotropy as a constraint for mantle flow</b>	<b>382</b>
9.6.1	Origin of upper mantle seismic anisotropy	385
9.6.2	Development of CPO anisotropy in upper mantle flow	386
9.6.2.1	Mechanical anisotropy	388
9.6.2.2	Absolute plate motion and net rotations	389
9.6.2.3	Memory of deformation	391
<hr/>		
<b>Review questions and discussion topics 9</b>		<b>393</b>

## **10 DIVERGENT MOTIONS AND CREATION OF THE LITHOSPHERE** 395

<b>10.1</b>	<b>The role of plumes in mantle convection</b>	<b>395</b>
10.1.1	Hotspots and plumes	395
10.1.2	Large igneous provinces	397
10.1.3	Plumes and the evolution of tectonics	399
10.1.4	Hotspot swells and plume heat transport	401
10.1.5	Hotspot reference frames and moving plumes	406
10.1.6	Thermal anomaly underneath hotspots and imaging plumes	407
10.1.7	Hotspots as probes of deep mantle reservoirs	408
10.1.7.1	Mixing of chemical heterogeneity in convection	410
10.1.7.2	Origin and geometry of geochemical reservoirs	412
10.1.8	Flood basalts and mass extinctions	413
<b>10.2</b>	<b>Rifting: Breaking continents apart</b>	<b>415</b>
10.2.1	Anatomy of a rift zone	416
10.2.2	Style and mechanics of rifting	421
10.2.3	Dynamics of rifting	426
10.2.4	The East African rift (EAR)	431
10.2.5	The Basin and Range	436
<b>10.3</b>	<b>Oceanic spreading: Generating lithosphere</b>	<b>439</b>
10.3.1	Structure of the oceanic crust	446
10.3.2	Slow to fast spreading and melt generation	448
10.3.3	Hydrothermal circulation	450
10.3.4	Partial melting	451
10.3.4.1	Two-phase flow	452
10.3.4.2	Melt parameterizations	453
10.3.5	Deviations from half-space cooling at old ages	455
10.3.5.1	Plate model	455
10.3.5.2	Chablis model	457

	10.3.5.3	Physical processes for deviations from HSC	458
	10.3.5.4	Regional deviations from HSC and reheating	459
<b>10.4</b>		<b>Plates as thermochemical boundary layers</b>	<b>460</b>
	10.4.1	Compositional density anomalies in the oceanic lithosphere	460
	10.4.2	The continental tectosphere	462
	10.4.2.1	Continental keels	464
	10.4.2.2	Midlithospheric discontinuities	465
		<b>Review questions and discussion topics 10</b>	<b>466</b>
<b>11</b>		<b>LATERAL MOTION OF THE LITHOSPHERE: STRIKE SLIP</b>	<b>467</b>
<b>11.1</b>		<b>Introduction</b>	<b>467</b>
	11.1.1	Hazard and risk	469
<b>11.2</b>		<b>Anatomy of a strike-slip fault zone</b>	<b>472</b>
<b>11.3</b>		<b>Tectonic context of strike-slip systems</b>	<b>473</b>
	11.3.1	Oceanic transforms	475
	11.3.1.1	Origin of oceanic transform faults	477
	11.3.2	Continental transforms	479
	11.3.2.1	Strike slip in collisional settings	479
	11.3.2.2	Tibetan collision	481
	11.3.2.3	Anatolian system	482
	11.3.3	Strike-slip systems in an active subduction setting	484
<b>11.4</b>		<b>Continental transforms and earthquake dynamics</b>	<b>487</b>
	11.4.1	Strain localization underneath faults	487
	11.4.2	Seismic hazard assessment and fault systems	489
	11.4.2.1	Time-dependent hazard estimates	489
	11.4.2.2	Constant fault geometry seismicity dynamics	490
	11.4.2.3	Fault system evolution	492
	11.4.3	Off-fault deformation	493
		<b>Review questions and discussion topics 11</b>	<b>494</b>
<b>12</b>		<b>RECYCLING THE LITHOSPHERE: SUBDUCTION</b>	<b>495</b>
<b>12.1</b>		<b>Introduction</b>	<b>495</b>
<b>12.2</b>		<b>Anatomy of a subduction zone</b>	<b>498</b>
<b>12.3</b>		<b>Trench forearc and sedimentary systems</b>	<b>499</b>
<b>12.4</b>		<b>Temperature, magmatism, and metamorphism</b>	<b>504</b>
	12.4.1	Thermal parameter and shear heating	504
	12.4.2	Volatile fluxes	509
	12.4.3	Petrological constraints	510
<b>12.5</b>		<b>Arc volcanism</b>	<b>515</b>
	12.5.1	Slab-associated, off-arc volcanism	519
<b>12.6</b>		<b>Back-arc systems</b>	<b>519</b>
<b>12.7</b>		<b>Slab and trench kinematics: Rollback</b>	<b>520</b>
<b>12.8</b>		<b>Flat slabs</b>	<b>525</b>
<b>12.9</b>		<b>Slab dynamics from force balance considerations</b>	<b>526</b>
	12.9.1	Viscous force balance	528
	12.9.1.1	Effective strength of the subducting lithosphere	530

<b>12.10</b>	<b>Subduction zone seismicity</b>	533
12.10.1	The megathrust interface	533
12.10.1.1	Megathrust deformation cycles	536
12.10.1.2	The spectrum of fault slip	538
12.10.1.3	Megathrust evolution and tectonics	540
12.10.2	Bulk deep slab deformation from moment release rates and style	541
12.10.3	Deep earthquake mechanisms	542
<b>12.11</b>	<b>Tectonics and dynamics of subduction evolution</b>	543
12.11.1	Subduction initiation	543
12.11.2	Subduction systems of the Pacific	546
12.11.2.1	The motion of the Pacific and back-arc extension	546
12.11.2.2	Izu-Bonin-Mariana and slab-slab interactions	549
12.11.2.3	Double slab systems	550
12.11.3	Slab rollback in the Mediterranean	552
<b>12.12</b>	<b>Slab transport through the transition zone</b>	557
12.12.1	Controls on regional slab and transition zone dynamics	561
12.12.2	Surface geology record of slab penetration	563
	<b>Review questions and discussion topics 12</b>	565
<b>13</b>	<b>OROGENY: MAKING MOUNTAINS</b>	567
13.1	Introduction	567
13.2	Anatomy of orogenic belts	570
13.3	The kinematics of mountain building	576
13.4	Mechanics of mountain building	578
13.5	The elevation of mountain belts	582
13.5.1	Wedge dynamics	587
13.5.1.1	Critical taper and Coulomb wedge theory	587
	<b>Expanded details 27: Coulomb wedge equations</b>	588
13.6	Tectonics, climate, and erosion	591
13.6.1	What is uplifting relative to what?	591
13.6.2	Uplift rates and surface transport	594
	<b>Expanded details 28: Stream power and surface transport laws</b>	595
13.6.3	Fingerprinting topography	598
13.7	Exhumation of deep-seated rock units	601
13.8	Dynamics of mountain building	607
13.9	Regional case histories	609
13.9.1	Cordilleran orogeny: The Andes	610
13.9.2	Accretionary orogeny: The Mediterranean	618
13.9.3	Collisional orogeny: Himalaya-Tibet	621
13.10	Orogeny, the Wilson cycle, and supercontinental assembly	630
	<b>Review questions and discussion topics 13</b>	635
<b>14</b>	<b>PLATE TECTONICS AND PLANETARY EVOLUTION</b>	637
14.1	Onset of plate tectonics	637
14.2	Different modes of early Earth heat transport	638

- 14.3 Parameterized thermal and volatile evolution models 639
- 14.4 Plate tectonics on other planets 644
  - 14.4.1 Should exoplanets have plate tectonics? 645

## OUTLOOK 647

## PART IV Appendixes 649

---

- A REFERENCE DATA AND ADDITIONAL FIGURES 651**
  - A.1 Important constants and typical parameter values 651
  - A.2 Geological timescale and magnetic reversals 651
  - A.3 Phase diagrams 651
  - A.4 Gravitational potentials for terrestrial planets 655
    - A.4.1 Comparison to Venus and Mars: Aphroditoid and areoid 657
  - A.5 Plate geometry, names, and motion statistics 659
- B ADDITIONAL TOPICS IN CONTINUUM MECHANICS 663**
  - B.1 General conservation laws: One law to derive them all 663
  - B.2 Strain compatibility equations 666
  - B.3 Finite strain 668
  - B.4 Relationship between moment tensors and fault plane solutions 670
  - B.5 Rayleigh-Taylor instabilities 670
- C MATH AND STATISTICS NOTES 675**
  - C.1 Useful conventions and basic mathematical functions 675
    - C.1.1 Scientific notation, unit prefixes, and messing with exponents 675
    - C.1.2 Logarithms 675
    - C.1.3 Oscillations and trigonometric (or harmonic) functions 676
      - C.1.3.1 Hyperbolic functions 678
    - C.1.4 Complex numbers and trigonometric functions 678
      - C.1.4.1 Quadratic equation 679
  - C.2 Calculus concepts 679
    - C.2.1 Full and partial derivatives 679
    - C.2.2 Taking derivatives 680
    - C.2.3 Series approximations 682
    - C.2.4 Integrals 683
    - C.2.5 Singularities 685
  - C.3 Linear algebra 685
    - C.3.1 Vectors 685
      - C.3.1.1 Norms 686
    - C.3.2 Matrices 687
      - C.3.2.1 Operations on square matrices 687
    - C.3.3 Adding and multiplying vectors and matrices 688
      - C.3.3.1 Addition 688
      - C.3.3.2 Dot vector product,  $\delta_{ij}$ , and  $\varepsilon_{ijk}$  688

	C.3.3.3	Cross vector product	689
	C.3.3.4	Dyadic vector product	690
	C.3.3.5	Multiplication of a matrix with a scalar	690
	C.3.3.6	Multiplication of a matrix with a vector	690
	C.3.3.7	Multiplication of two matrices	691
	C.3.3.8	Inner product of two tensors	691
C.3.4		<b>Matrix flavors and additional operations</b>	691
	C.3.4.1	Identity matrix	691
	C.3.4.2	Matrix inverse	691
	C.3.4.3	Orthogonal or rotation matrices	692
	C.3.4.4	Euler angles and rotation matrices	692
	C.3.4.5	Matrix decomposition	693
	C.3.4.6	Eigenvalues and eigenvectors	693
	C.3.4.7	Linear inverse problems	694
<b>C.4</b>		<b>Coordinate systems and spherical trigonometry</b>	694
	C.4.1	Cartesian and spherical coordinate systems	694
	C.4.2	Useful formulas for spherical trigonometry	696
<b>C.5</b>		<b>Vector calculus: Divergence, curl, and tensors</b>	698
	C.5.1	The Gauss and Stokes theorems	701
	C.5.2	Tensors	701
		C.5.2.1 The wedge operator	702
<b>C.6</b>		<b>Spectral analysis</b>	702
	C.6.1	Fourier series	702
	C.6.2	Spherical harmonics	703
		C.6.2.1 Helmholtz decomposition of vector fields	706
<b>C.7</b>		<b>Simple statistics and curve fitting</b>	707
	C.7.1	Means, variance, and standard deviation	707
		C.7.1.1 Averaging of directional and orientational data	708
	C.7.2	Distributions and moments	709
	C.7.3	Linear regression	710
	C.7.4	Correlation	711
	C.7.5	Estimates of uncertainties	711
