

CONTENTS

Bernard Bolzano Lecture

<i>Pavel Drábek</i> : Two notions which affected nonlinear analysis	18
---	----

Plenary Speakers

<i>Christian Bonatti</i> : Towards a global view of dynamical systems, for the C^1 -topology	19
<i>Marek Fila</i> : Extinction of solutions of the fast diffusion equation	20
<i>Ernst Hairer</i> : Long-term analysis of numerical and analytical oscillations	21
<i>Herbert Koch</i> : Parabolic equations with rough initial data	22
<i>Vladimir Maz'ya</i> : Bounds for eigenfunctions of the Laplacian on noncompact Riemannian manifolds	23
<i>Felix Otto</i> : A quantitative theory in stochastic homogenization	24
<i>Laure Saint-Raymond</i> : From Newtonian system of particles to heat equation	25
<i>Giuseppe Savaré</i> : Heat flow, optimal transport and curvature	26

Invited Speakers

<i>Nalini Anantharaman</i> : Quantum ergodicity on large regular graphs	27
<i>Miroslav Bulíček</i> : On Hölder continuity of solution to elliptic systems & variational integrals ...	28
<i>Sylvain Ervedoza</i> : On the local exact controllability of the 1-d compressible Navier-Stokes equation	29
<i>Martin J. Gander</i> : Multigrid for Helmholtz equations just does not work! Or does it?	30
<i>P. E. Kloeden</i> : Random ordinary differential equations and their numerical approximation	31
<i>Irena Lasiecka</i> : Global wellposedness of a third order in time nonlinear wave equation arising in high intensity ultrasound (HIU)	32
<i>Jean Mawhin</i> : Nonlinear boundary value problems involving the extrinsic mean curvature operator	33
<i>Alessio Porretta</i> : Long time average of Mean Field Games	34
<i>Carlos Rocha</i> : Sturm global attractors and Morse decompositions	35
<i>Daniel Ševčovič</i> : On a gradient flow of plane curves minimizing the isoperimetric ratio in the relative geometry	36
<i>Philippe Souplet</i> : Nondegeneracy of blow-up points for the parabolic Keller-Segel system	37
<i>Roman Srzednicki</i> : A topological approach to computing the Conley index of Poincaré maps	38
<i>Zdeněk Strakoš</i> : On adaptivity, convergence and inexact algebraic computations in numerical solution of partial differential equations	39
<i>Marius Tucsnak</i> : Some recent advances on time optimal control problems for infinite dimensional systems	40
<i>Alberto Valli</i> : The electrostatics problem with a dipole source: theoretical results and numerical approximation	41
<i>Juan J. L. Velázquez</i> : Singularity formation in some kinetic models	42
<i>Tobias Weth</i> : Liouville type theorems for a class of non-cooperative elliptic systems	43
<i>Eiji Yanagida</i> : Removable and non-removable singularities in parabolic equations	44

Minisymposia

MS1: Methods of nonlinear analysis in the theory of differential inclusions and control theory

Organizer: Valeri Obukhovskii

<i>Vladimir V. Goncharov</i> : Exposed solutions of differential inclusions	45
<i>Valeri Obukhovskii</i> : On applications of the method of guiding functions in some problems of differential inclusions and control systems	46
<i>Paola Rubbioni</i> : Multivalued fixed point theorems in Banach spaces	47
<i>Valentina Taddei</i> : Semilinear evolution equations without strong compactness: solvability and controllability	48

MS2: Critical point theory and applications to nonlinear differential problem

Organizer: Gabriele Bonanno

<i>Giuseppina Barletta</i> : Sign-changing solutions for quasilinear elliptic equations with Neumann boundary conditions	49
<i>Gabriele Bonanno</i> : Dirichlet problems with critical growth via a local minimum theorem	50
<i>Pasquale Candito</i> : Existence and multiplicity results for parameter-dependent quasilinear elliptic equations	51
<i>Salvatore A. Marano</i> : Non-smooth critical point theory on closed convex sets	52

MS3: Qualitative theory of quasilinear differential equations

Organizer: Ondřej Došlý

<i>Ondřej Došlý</i> : Recent trends in the half-linear oscillation theory	53
<i>Serena Matucci</i> : Existence of globally positive and bounded solutions for second order equations with changing sign weight	54
<i>Yuriy V. Rogovchenko</i> : Oscillation of a class of nonlinear neutral differential equations	55
<i>Jitsuro Sugie</i> : Asymptotic stability of an underwater pendulum with quadratic damping	56

MS4: Variational methods for quasilinear elliptic problems

Organizer: Peter Takáč

<i>Jesús Hernández Alonso</i> : Positive solutions to a nonlinear nonlocal elliptic system arising in desertification	57
<i>Stephen B. Robinson, Pavel Drábek</i> : On the solvability of resonance problems with respect to the Fucik Spectrum	58
<i>Andrzej Szulkin</i> : On a quasilinear Schrödinger equation	59
<i>Peter Takáč</i> : On travelling waves in nonlinear diffusion models	60

MS5: Geometrical aspects of spectral theory

Organizer: David Krejčířík

<i>José M. Arrieta</i> : High order selfadjoint operators and domain perturbation	61
<i>Yehuda Pinchover</i> : Optimal Hardy-type inequalities and the spectrum of the corresponding operator	62

<i>Matěj Tušek</i> : The magnetic Laplacian in shrinking tubular neighbourhoods of hypersurfaces	63
<i>Timo Weidl</i> : Spectral estimates of the magnetic Dirichlet Laplacian in domains	64
MS6: Differential equations with singularities and impulses	
Organizer: Irena Rachůnková	
<i>José Ángel Cid</i> : Periodic oscillations in a singular equation modelling valveless pumping	65
<i>Ivan Kiguradze</i> : Positive solutions of two-point boundary value problems for higher order nonlinear differential equations	66
<i>Irena Rachůnková</i> : Boundary value problems with state-dependent impulses	67
<i>Mirostawa Zima</i> : Positive solutions of periodic boundary value problem at resonance	68
MS7: Analysis and numerical methods in nonlinear solid mechanics	
Organizer: Gerhard Starke	
<i>Piotr Minakowski</i> : Plasticity of crystalline solids treated as material flow through adjustable crystal lattice	69
<i>Benjamin Müller</i> : LSFEM for geometrically and physically nonlinear elasticity problems	70
<i>Patrizio Neff</i> : Extending Korn's first inequality to incompatible tensor fields	71
<i>Gerhard Starke</i> : First-order system finite elements for nonlinear models in solid mechanics	72
MS8: Recent trends in nonlinear boundary value problems	
Organizer: Alberto Cabada	
<i>Alberto Cabada</i> : Existence results for equations with reflection	73
<i>Antonio Iannizzotto</i> : On a problem of Huang concerning best constants in Sobolev embeddings	74
<i>Gennaro Infante</i> : New criteria for the existence of multiple solutions in cones	75
<i>Stepan A. Tersian</i> : On homoclinic solutions of semilinear p -Laplacian difference equations	76
MS9: Geometric aspects of elliptic PDEs and related inequalities	
Organizer: Andrea Cianchi	
<i>Andrea Cianchi</i> : Sharp constants in Sobolev trace inequalities in BV	77
<i>Wolfgang Reichel</i> : A stability result for an overdetermined problem in potential theory	78
<i>Julio D. Rossi</i> : Discontinuous gradient constraints and the infinity Laplacian	79
<i>Cyril Tintarev</i> : Concentration profiles for Moser-Trudinger functional are shaped like toy pyramids	80
MS10: Quantum dynamics on graphs	
Organizer: Pavel Exner	
<i>Gregory Berkolaiko</i> : Nodal count of graph eigenfunctions as an index of instability	81
<i>Claudio Cacciapuoti</i> : Nonlinear Schrödinger equation on graphs	82
<i>Pavel Exner</i> : Resonances in quantum graphs	83
<i>Olaf Post</i> : Shrinking fat graphs and convergence of operators and spectra	84

MS11: Qualitative theory of nonlinear elliptic and parabolic equations

Organizer: Kazuhiro Ishige

<i>Chiun-Chuan Chen</i> : A Simple PDE model of spot replication	85
<i>Kazuhiro Ishige</i> : Parabolic power concavity and parabolic boundary value problems	86
<i>Michinori Ishiwata</i> : On the scale-invariant critical Hardy's inequality and related variational problems	87
<i>Michael Winkler</i> : Finite-time blow-up in parabolic Keller-Segel systems	88

MS12: Functional differential equations

Organizer: Alexander Domoshnitsky

<i>Alexander Domoshnitsky</i> : Maximum principles for functional differential equations with ordinary or partial derivatives and nonlocal boundary conditions	89
<i>Mário Frengue Getimane, Sergey Labovskiy</i> : On discreteness of spectrum of a functional-differential operator on axis	90
<i>Zdeněk Opluštil</i> : Some oscillation criteria for the second-order linear delayed differential equation	91
<i>László Simon</i> : Second order quasilinear functional equations	92

MS13: Coupled variants of the Cahn-Hilliard equation

Organizer: Elisabetta Rocca

<i>Günther Grün</i> : On convergent numerical schemes for two-phase flow of incompressible fluids with different mass densities	93
<i>Alain Miranville</i> : Some generalizations of the Cahn-Hilliard equation	94
<i>Elisabetta Rocca</i> : A nonlocal model H with nonconstant mobility	95
<i>Giulio Schimperna</i> : A nonisothermal model for two-phase fluids	96

MS14: Analysis and simulations of fluid-structure interaction

Organizer: Mária Lukáčová-Medvid'ová

<i>Suncica Canic, Boris Muha, Martina Bukac</i> : Fluid-structure interaction with multiple structural layers	97
<i>Céline Grandmont</i> : Existence and collision results for some fluid-elastic coupling	98
<i>M. Lukáčová-Medvid'ová, A. Hundertmark-Zaušková, G. Rusnáková</i> : Kinematic splitting algorithm for fluid-structure interaction in hemodynamics	99
<i>A. Hundertmark-Zaušková, M. Lukáčová-Medvid'ová, Š. Nečasová</i> : On the existence of weak solution to the coupled fluid-structure interaction problem for non-Newtonian shear-dependent fluid	100

MS15: Thin poroelastic media and applications

Organizers: Anna Marciniak-Czochra and Andro Mikelić

<i>Suncica Canic, Boris Muha, Martina Bukac</i> : Regularizing effects of a thin elastic interface with mass in fluid-multi-layered structure interaction problems	101
<i>Anna Marciniak-Czochra, Andro Mikelić</i> : A rigorous derivation of the equations for the clamped Biot-Kirchhoff-Love poroelastic plate	102

<i>Šárka Nečasová, Takéo Takahashi, Marius Tucsnak</i> : Weak solutions for the motion of a self-propelled deformable structure in a viscous incompressible fluid	103
<i>E. Rohan, B. Miara, V. Lukeš</i> : Homogenization in vibro-acoustic problems involving perforated plates	104

MS16: Hamiltonian wave equations

Organizer: Gerald Teschl

<i>Mats Ehrnstrom</i> : On the existence and stability of solitary-wave solutions to a class of evolution equations of Whitham type	105
<i>Tamara Grava</i> : Hamiltonian PDEs and dispersive shock waves	106
<i>Helge Holden</i> : A closer look at conservative and dissipative solutions for the Camassa-Holm equation	107
<i>Gerald Teschl</i> : On the long-time asymptotics for the dispersionless Camassa-Holm equation	108

MS17: Weak solutions to the Navier-Stokes equations and their regularity

Organizer: Reinhard Farwig

<i>Reinhard Farwig</i> : Optimal initial values and regularity conditions of Besov space type for weak solutions to the Navier-Stokes system	109
<i>Jiří Neustupa</i> : Some recent results on regularity of weak solutions to the Navier-Stokes equations	110
<i>Witold Sadowski</i> : Stability of local existence and numerical verification of regularity in 3D Navier-Stokes equations	111
<i>Joerg Wolf</i> : On the local pressure and local regularity for suitable weak solutions to the Navier-Stokes equations and related systems	112

MS18: Degeneration and singularity

Organizer: Piotr Bogusław Mucha

<i>Patrick Guidotti</i> : Well-posedness for a quasi-stationary droplet model	113
<i>Julio D. Rossi</i> : Mass transport problems for the Euclidean distance obtained as limits of p -Laplacian type problems with obstacles	114
<i>Piotr Mucha, Monika Muszkieta, Piotr Rybka</i> : Examples of singular diffusion equations in one and two dimension: facets and more	115
<i>Ewelina Zatorska</i> : Chemically reacting mixtures in terms of degenerated parabolic setting	116

MS19: Topological methods in differential equations

Organizer: Luisa Malaguti

<i>Jan Andres</i> : Limit-periodic solutions of differential and difference equations	117
<i>Grzegorz Gabor</i> : Structure of the solution sets to impulsive differential inclusions	118
<i>Luisa Malaguti</i> : Topological methods for semi-linear evolution equations in abstract spaces	119
<i>Martin Váth</i> : Instability of a reaction-diffusion system with unilateral obstacles	120

MS20: Slow-fast and hysteretic models of population dynamics

Organizer: Dmitrii Rachinskii

- Pavel Gurevich, Sergey Tikhomirov*: Reaction-diffusion systems with spatially distributed relays 121
- Alexander Pimenov, Andrei Korobeinikov, Dmitrii Rachinskii*: Modelling permanent effects of a temporary stimulus (PETS) in predator-prey and SIR systems 122
- Dmitrii Rachinskii, Gary Friedman, Pavel Gurevich*: Memory in switching two-phenotype populations 123
- Vincenzo Recupero*: BV solutions of rate independent differential inclusions 124

MS21: Recent trends in PDE-constrained control and shape design

Organizer: Dietmar Hömberg

- Dietmar Hömberg*: An optimal shape design approach towards distortion compensation 125
- Antoine Laurain*: Shape optimization of the ground state for two phase conductors 126
- Christian Meyer*: Optimal control of static elastoplasticity with hardening 127
- Andrzej Myśliński*: Hybrid level set phase field method in shape optimization 128

MS22: Asymptotic behavior of functional differential equations

Organizer: Mihály Pituk

- Jan Čermák*: Stability and asymptotic properties of neutral delay differential equations 129
- Rafael Obaya*: Almost periodic and almost automorphic dynamics for non autonomous functional differential equations 130
- Mihály Pituk*: Asymptotic behavior of functional differential equations 131
- Gergely Röst*: Global dynamics for spatial epidemic and population models in patchy environment with delays 132

MS23: Hyperbolic conservation laws

Organizer: Piotr Gwiazda

- Boris Andreianov, Shyam Sundar Ghoshal*: Degenerate parabolic problems with discontinuous flux 133
- Piotr Gwiazda*: Hyperbolic conservation laws: classical results and new perspectives 134
- Agnieszka Świerczewska-Gwiazda*: Multi-dimensional scalar conservation laws with fluxes discontinuous in the unknown and the spatial variable 135
- Petra Wittbold*: Hyperbolic conservation laws with multiplicative stochastic perturbation 136

MS24: Structure-preserving numerical schemes and related topics

Organizer: Shigetoshi Yazaki

- Michal Beneš, Miroslav Kolář, Daniel Ševčovič*: Numerical solution of constrained mean curvature flow 137
- Daisuke Furihata*: An attempt to create fast numerical schemes with the discrete variational derivative method 138
- Brynjulf Owren*: Geometric properties of Kahan's method 139
- Shigetoshi Yazaki*: On a structure-preserving numerical scheme for moving boundary problems .. 140

MS25: Selected Navier-Stokes problems

Organizer: Reimund Rautmann

<i>Mikhail V. Korobkov, Konstantin Pileckas, Remigio Russo</i> : Solution of Leray's problem for stationary Navier-Stokes equations in plane domains	141
<i>Reimund Rautmann</i> : Bounds to the change of vorticity by transition from slip- to no-slip fluid flow	142
<i>Mindaugas Skujus</i> : On the correct asymptotic conditions at infinity for the time-periodic Stokes problem set in a system of semi-infinite pipes	143
<i>Werner Varnhorn</i> : Necessary and sufficient conditions for the existence of Helmholtz decompositions in general domains	144

MS26: Large time behavior of solutions to nonlinear and nonlocal problems

Organizer: Grzegorz Karch

<i>Piotr Biler</i> : Blowup and self-similar solutions for two component drift-diffusion systems	145
<i>Jan Cholewa</i> : Cahn-Hilliard equation in $H^1(R^N)$	146
<i>Dominika Pilarczyk</i> : L^2 -asymptotic stability of mild solutions to Navier-Stokes system	147
<i>Anna Pudelko</i> : Asymptotic behavior of some nonlocal convection-diffusion equations	148

MS27: Recent results in continuum and fracture mechanics

Organizer: Werner Varnhorn

<i>Christian Heinemann</i> : Degenerating Cahn-Hilliard systems coupled with mechanical effects and complete damage processes	149
<i>Maria Specovius-Neugebauer, Martin Steigemann, Sergej A. Nazarov</i> : The energy criterion in quasistatic crack propagation: some special aspects	150
<i>Martin Steigemann, Maria Specovius-Neugebauer</i> : Change of energy caused by crack propagation in 3-dimensional anisotropic solids	151
<i>Florian Zanger</i> : Uniqueness of solutions of fully implicit nonlinear difference schemes	152

MS28: Fourier analysis and compressible Navier-Stokes equations

Organizer: Raphaël Danchin

<i>Frédéric Charve</i> : Convergence of capillary fluid models: from the non-local to the local Korteweg system	153
<i>Raphaël Danchin</i> : A survey on Fourier analysis methods for compressible flows	154
<i>Boris Haspot</i> : Existence of global strong solution for Korteweg system with large infinite energy initial data	155
<i>Xian Liao</i> : On the well-posedness of the low Mach number limit system	156

MS29: Partial differential equations in fluid mechanics

Organizer: Antonín Novotný

<i>N. V. Chemetov, Š. Nečasová</i> : The motion of the rigid body with collisions in a bounded domain. Global solvability result	157
<i>Taoufik Hmidi</i> : On the rotating patches for inviscid flows	158
<i>Hari Shankar Mahato</i> : Homogenization of a system of multi-species semilinear diffusion-reaction equations in an $H^{1,p}$ setting	159

Antonín Novotný: On the Euler-Boussinesq asymptotics of the Navier-Stokes-Fourier system ... 160

MS30: Long term behavior of difference equations and systems of difference equations

Organizer: Stevo Stević

Jaromír Bařtinec, Josef Diblík: Sufficient conditions for existence of a positive solution of discrete equations of $(k + 1)$ -st order 161

Josef Diblík: Ważewski’s method for discrete equations 162

Stevo Stević: Long term behavior of positive solutions of some classes of difference equations and systems of difference equations 163

Zdeněk Svoboda: Positive solutions of p -type retarded functional differential equations 164

MS31: Recurrence and stability of nonlinear models arising in the applied sciences

Organizer: Pedro J. Torres

Jifeng Chu, Barreira Luis, Claudia Valls: A nonuniform dichotomies with different growth rates 165

Alessandro Margheri: Some analytical results about periodic orbits in the restricted three body problem with dissipation 166

C. Rebelo: Some results about epidemiological models 167

Pedro J. Torres: Periodic solutions of a fluid particle induced by a prescribed vortex path in a circular domain 168

Students’ Minisymposium: Differential equations and their applications

Organizer: Jan Pospíšil

Radim Hošek: From generalization of bistable equation to Fibonacci sequence 169

Pavel Jirásek: Compactness conditions for p -Laplacian 170

Lukáš Kotrla: Differentiability properties of p -trigonometric functions 171

Iveta Looseová: The asymptotes of Fučík curves for asymmetric difference operator 172

Milan Mrázek: Calibration and simulation of Heston stochastic volatility model 173

Martin Rohleder: Existence of oscillatory solutions of nonlinear singular ODE 174

Tomáš Sobotka: Implementation of fractional stochastic volatility model 175

Jana Vampolová: Singular second order ODE with regularly varying coefficients 176

Jonáš Volek: Transport equation on semidiscrete domains 177

Contributed Talks

Toyohiko Aiki: Large time behavior of a solution to a two-scale problem as mathematical model for sulfate attack in sewer pipes 178

Richard Andrášik: Primal-dual nonlinear rescaling method with dynamic scaling parameter update for the optimization arising from 3D contact problems 179

María Anguiano: Asymptotic behaviour of non-autonomous systems 180

Alejandro Omón Arancibia: The size of vorticity and its connection with pressure in nonlinear Navier-Stokes equations 181

Alejandro Omón Arancibia: On the stability of the initial conditions for the parabolic Gelfand Problem 182

<i>Irina V. Astashova</i> : On asymptotic behavior of solutions to Emden-Fowler type higher-order differential equations	183
<i>Gia Avalishvili</i> : On investigation of a dynamical thermoelastic model with two phase-lags	184
<i>Miroslav Bartušek</i> : Limit-point/limit-circle problem for quasilinear second order equations with damping	185
<i>Jiří Benedikt</i> : Estimates of the principal eigenvalue of the p -Laplacian and the p -biharmonic operator	186
<i>Cristian Bereanu</i> : Dirichlet problems with the mean curvature operator in Minkowski space	187
<i>Dana Bereanu</i> : Periodic solutions for singular perturbations of the singular φ -Laplacian operator	188
<i>Handan Borluk</i> : New numerical results on some Boussinesq-type wave equations	189
<i>Abdallah Bradji</i> : A new error estimate for a fully finite element discretization scheme for parabolic equations using Crank-Nicolson method	190
<i>Abdallah Bradji</i> : Some new error estimates for finite element methods for second order hyperbolic equations using the Newmark method	191
<i>Alessandro Calamai</i> : Forced oscillations for second order ODEs on a class of implicitly defined manifolds	192
<i>Luis P. Castro</i> : Boundary value problems governed by the Helmholtz equation in a half-plane with an obstacle perpendicular to the boundary	193
<i>Aurelian Cernea</i> : On the existence of solutions for a nonlinear differential inclusion	194
<i>V. B. Cherepennikov</i> : Polynomial quasisolutions method for some linear differential difference equations of mixed type	195
<i>Gyeong-Mi Cho</i> : Kernel function based interior-point algorithms for symmetric optimization problems	196
<i>Jaydev Dabas</i> : Impulsive neutral fractional functional differential equation with state dependent delay and an integral condition	197
<i>Giuseppina D'Agui</i> : Elliptic problems with variable exponent and nonhomogeneous Neumann conditions	198
<i>Lukasz Dawidowski</i> : Scales of Banach spaces, theory of interpolation and their applications	199
<i>Raj Narayan Dhara, Agnieszka Kałamajska</i> : On one extension theorem dealing with weighted Orlicz-Slobodetskii space on the boundary of domain	200
<i>Nilay Duruk Mutlubaş</i> : On periodic solutions of a model equation for surface waves of moderate amplitude in shallow water	201
<i>Aldona Dutkiewicz</i> : On the existence of solutions of ordinary differential equations in Banach spaces	202
<i>J. Džurina, B. Baculiková</i> : Oscillation of the even order delay differential equation	203
<i>Chikahiro Egami</i> : Rhythmic phenomenon of the Belousov-Zhabotinsky reaction catalyzed by cerium and ferriin	204
<i>Michela Eleuteri</i> : Fatigue accumulation in oscillating thermoelastoplastic structures with hysteresis - part I (modelling)	205
<i>Husnu A. Erbay</i> : The Cauchy problem for a general class of doubly dispersive nonlocal nonlinear wave equations	206
<i>Saadet Erbay</i> : Existence of solitary waves for a class of nonlocal nonlinear equations	207
<i>Albert Erkip</i> : Thresholds for global existence and blow-up in a general class of doubly dispersive nonlocal wave equations	208

<i>Carlos Escudero</i> : Existence results for a fourth order PDE arising in condensed matter physics .	209
<i>Everaldo de Mello Bonotto, Jaqueline da Costa Ferreira</i> : Method of Lyapunov functions for impulsive semidynamical systems	210
<i>Alexey V. Filinovskiy</i> : On the estimates to the eigenvalues of a Robin problem	211
<i>Simona Fišnarová</i> : Local and global estimates for modified Riccati equation in half-linear oscillation theory	212
<i>Matteo Franca</i> : Multiplicity results for the scalar curvature equation	213
<i>Jan Franců, Petra Nováčková</i> : On modeling torsion of a bar with multi-connected profile	214
<i>Dana Fraňková</i> : A norm and two metrics in the space of regulated functions	215
<i>Sergio Frigeri</i> : Recent results on nonlocal diffuse-interface models for binary fluids	216
<i>Takeshi Fukao</i> : Abstract theory of variational inequality and application to nonlinear PDE	217
<i>Dorota Gabor</i> : Homotopy invariants detecting global bifurcations of solutions to multiparameter differential problems	218
<i>Valery A. Gaiko</i> : The termination principle and bifurcation geometry of polynomial dynamical systems	219
<i>Evgeny Galakhov</i> : Blow-up for differential inequalities with singularities on unbounded sets	220
<i>Dan Gamliel</i> : Time delay in chemical exchange during an NMR pulse	221
<i>Isaac A. García</i> : Non-isolated T -periodic orbits of T -periodic differential equations through inverse Jacobi multipliers	222
<i>Aigars Gedroics</i> : On semi-discrete problems' analytic solutions for some equations of mathematical physics with periodic boundary conditions	223
<i>Anna Gołębiewska</i> : Bifurcation of periodic solutions of asymptotically linear autonomous Hamiltonian system	224
<i>Isabell Graf</i> : Homogenization of a carcinogenesis model with different scalings with the homogenization parameter	225
<i>Jaume Giné, Maite Grau, Xavier Santallusia</i> : Centers in the trigonometric Abel equation	226
<i>Pelin Güven Geredeli</i> : On the quasilinear degenerate parabolic equations	227
<i>Petr Hasil</i> : Oscillation constant for half-linear equations with asymptotically almost periodic coefficients	228
<i>Didier Henrion</i> : Semidefinite optimization for measure-valued differential equations	229
<i>Dieu Hung Hoang, Michal Beneš, Tomáš Oberhuber</i> : Anisotropic level-set equation in relative geometry	230
<i>Kota Ikeda</i> : Interactions of traveling spots in a reaction-diffusion system	231
<i>Sachiko Ishida</i> : Boundedness of global solutions to degenerate Keller-Segel systems	232
<i>Naoyuki Ishimura, MasaAki Nakamura</i> : Attractors for the magnetic Bénard problem	233
<i>Tetsuya Ishiwata</i> : Spiral-shaped solutions to crystalline motion with a moving tip	234
<i>Angela Jimenez-Casas</i> : General model of traffic flow in a network	235
<i>Manuel Z. Jimenez</i> : Weak almost periodic motions, minimality and stability in impulsive semidynamical systems	236
<i>Ryuji Kajikiya</i> : Positive solutions of the p -Laplace Emden-Fowler equation in hollow thin symmetric domains	237
<i>Petr Kaplický</i> : Regularity of weak solutions to p -Laplace and p -Stokes systems	238

<i>János Karsai, Ágnes Méri, Irma Szimjanovszki, Éva V. P. Rácz</i> : Meanfield and cellular automata models of competitions in metapopulations with overcolonization	239
<i>Nobuyuki Kato</i> : Abstract size-structured population dynamics in Banach spaces	240
<i>Tatsuki Kawakami</i> : Large time behavior of solutions of a semilinear elliptic equation with a dynamical boundary condition	241
<i>Nobuyuki Kenmochi, Atsushi Kadoya</i> : A mathematical model for the recovery of human and economic activities in disaster regions	242
<i>Andrii Khrabustovskyi</i> : Periodic differential operators with asymptotically predefined spectral gaps	243
<i>Tomáš Kisela</i> : Stability regions for fractional difference equations	244
<i>Piotr Kokocki</i> : Connecting orbits for nonlinear evolution equations at resonance	245
<i>Jana Kopfová</i> : Fatigue accumulation in oscillating thermoelastoplastic structures with hysteresis, part II (mathematics)	246
<i>Aleksey Kostenko</i> : Forward-backward diffusion equations and indefinite spectral problems	247
<i>J. Kraljević, D. Žubrinić</i> : Quasilinear elliptic equations with positive exponent on the gradient .	248
<i>David Krejčířík</i> : The Brownian traveller on manifolds	249
<i>Ondřej Kreml</i> : Global ill-posedness for compressible isentropic Euler system	250
<i>Wojciech Kryszewski</i> : The generalized Krasnosel'skii formula for semilinear differential equations and periodic solutions	251
<i>Kota Kumazaki</i> : Large time behavior of a solution for carbon dioxide transport model in concrete carbonation process	252
<i>Minkyu Kwak</i> : Regularity of solutions of 3D Navier-Stokes equations in a Lipschitz domain for small data	253
<i>Eun Kyoung Lee</i> : Three solutions theorem for p -Laplacian problems with a sign-changing singular weight and its application	254
<i>Yong-Hoon Lee</i> : A new solution operator for p -Laplacian systems with sign-changing singular weights	255
<i>Tomáš Ligurský</i> : A continuation problem for computing solutions of discretised evolution problems	256
<i>Jian-Jhong Lin</i> : Existence, uniqueness and stability of traveling wave fronts for delayed cellular neural networks	257
<i>Rodica Luca-Tudorache</i> : Multiple positive solutions for a higher-order multi-point boundary value problem	258
<i>Václav Mácha</i> : L^q theory for generalized Stokes system under perfect slip boundary condition ..	259
<i>Marek T. Malinowski</i> : On set-valued and fuzzy stochastic differential equations	260
<i>Rainer Mandel</i> : Minimal energy solutions for repulsive nonlinear Schrödinger systems	261
<i>Stepan S. Manko</i> : Approximations of quantum-graph vertex couplings by singularly scaled potentials	262
<i>Robert Mařík</i> : Riccati technique for delayed half-linear differential equation	263
<i>Hideaki Matsunaga</i> : Formal adjoint theory and asymptotic formula of solutions of integral equations with infinite delay	264
<i>Hiroshi Matsuzawa</i> : Sharp estimate of the spreading speed determined by nonlinear free boundary problems	265
<i>Susanna Maza</i> : Properties of monodromic singularities on center manifolds in \mathbb{R}^3 characterized from Lie symmetries	266

<i>Dagmar Medková</i> : The Robin problem for the scalar Oseen equation	267
<i>Milan Medveď</i> : Functional-differential equations with Riemann-Liouville fractional integrals in the nonlinearities	268
<i>Alexander A. Minakov</i> : Parametrices for the modified Korteweg-de Vries equation in a modulated elliptic wave region	269
<i>Sara Monsurro</i> : L^p and $W^{2,p}$ -estimates for solutions of elliptic equations in unbounded domains	270
<i>Giselle A. Monteiro</i> : Continuous dependence of solutions of generalized linear differential equations on a parameter	271
<i>Yoshihisa Morita</i> : Spectral comparison in a reaction-diffusion system	272
<i>Yusuke Murase</i> : Solvability of mathematical modeling for brewing process of Japanese Sake with unknown finish time	273
<i>Petra Nábělková</i> : Porous media flow with Preisach hysteresis	274
<i>Luděk Nechvátal</i> : On a linear fractional difference equation	275
<i>Emil Novruzov</i> : Blow-up phenomena for Dullin-Gottwald-Holm equation with dissipative term ..	276
<i>Hirokazu Ohya</i> : Embedding properties for weighted Sobolev spaces in unbounded domains	277
<i>Masakazu Onitsuka</i> : Attractivity implies stability for half-linear differential systems with time-varying coefficients	278
<i>Tomasz Piasecki</i> : Strong solutions to the stationary compressible Navier-Stokes-Fourier system .	279
<i>Alexander Pimenov, Natalia Rebrova, Dmitrii Rachinskii, Andrei G. Vladimirov</i> : Effects of noise on a periodic solution of a system of nonlinear delay-differential equations in application to semiconductor lasers	280
<i>Milan Pokorný</i> : Steady compressible Navier-Stokes-Fourier system	281
<i>Zdeněk Pospíšil</i> : Travelling wave in a time-discrete reaction-diffusion equation	282
<i>Nataliya P. Protsakh</i> : Direct and inverse problems for semilinear higher order ultraparabolic equation	283
<i>Petra Pustějovská, Miroslav Bulíček</i> : On existence analysis of steady flows of generalized Newtonian fluids with concentration dependent power-law index	284
<i>Josef Rebenda</i> : Stability of functional differential systems with a finite number of delays	285
<i>Lutz Recke</i> : Hopf bifurcation for dissipative hyperbolic PDEs	286
<i>Pavel Řehák</i> : Extreme solutions to a system of n nonlinear differential equations and regularly varying functions	287
<i>Anastasia Maltseva, Volker Reitmann</i> : Bifurcations of invariant measures in discrete-time parameter dependent cocycles	288
<i>Svitlana P. Rogovchenko</i> : Dynamics of a single species in a fluctuating environment	289
<i>Svajūnas Sajavičius</i> : Radial basis function method for multidimensional elliptic equation with nonlocal conditions	290
<i>Naoki Sato</i> : Solvability of a one dimensional free boundary problem for adsorption phenomena .	291
<i>Anton Savostianov, Sergey Zelik</i> : Smooth attractors for quintic wave equations with fractional damping	292
<i>Sebastian Schwarzacher</i> : BMO estimates for p -parabolic systems	293
<i>Karel Segeth</i> : Smooth approximation of data and its application	294
<i>Naoki Shioji</i> : Uniqueness of positive radial solutions of $\Delta u + g(r)u + h(r)u^p = 0$ and its applications	295

<i>Inbo Sim</i> : Existence and uniqueness results for $p(x)$ -Laplacian with degeneracy	296
<i>Antonín Slavík</i> : Diffusion-type dynamic equations with discrete-space domains	297
<i>Siniša Slijepčević</i> : An ergodic Poincaré-Bendixson theorem for extended scalar reaction-diffusion equations	298
