

Table of Contents

Authors' Preface	5
1. Introduction	11
Notation	15
References to Chapter 1	16
2. Mass Transfer with Chemical Reaction	17
2.1 Simple Reaction of Dissolved Gas Component in the Liquid Phase	19
2.1.1 Criterion for Reaction Location	20
2.1.2 Limiting Cases	21
2.1.2.1 Reaction in the Bulk of the Liquid	21
2.1.2.2 Reaction in the Liquid Film	22
2.1.3 Application of Approximative Models	23
2.1.4 The Effect on the Reaction Rate of Reactor Type	26
2.1.5 Reaction Time	28
2.1.6 Reversible Reactions	31
2.2 Consecutive Reactions	31
2.2.1 Reactions of the Type $A \rightleftharpoons B \rightleftharpoons R$	32
2.2.1.1 Irreversible Reactions	32
2.2.1.2 Reversible Reactions	33
2.2.2 Reactions of the Type $A + B \rightleftharpoons R$ $R + B \rightleftharpoons S$	33
2.2.2.1 Irreversible Reactions	33
2.2.2.2 Reversible Reactions	34
2.2.3 Reactions of the Type $A + B \rightarrow R$ $A + R \rightarrow S$	34
2.2.3.1 Fast-Reaction Regime	34
2.2.3.2 Instantaneous-Reaction Regime	36
2.2.4 Complex Reaction of a Single Gas with a Single Liquid	37
2.2.5 Modelling of Consecutive Reactions Based on the Film Theory of Mass Transfer	38
2.2.5.1 The Effect of Mass Transfer Parameters on Selectivity of Reaction Intermediate Formation	43
2.2.5.2 Applicability of the Approximative Model	48

2.2.6	Approximative Model of Consecutively-Parallel Reactions in Gas-Liquid Systems	52
2.3	Simultaneous Absorption of Two Gases Reacting with the Absorbent	65
2.3.1	Calculation of Absorption Rates	70
2.4	Reactions in Three-Phase Systems	71
2.4.1	Reactions in Systems Gas-Liquid-Suspended Solid Particles	71
2.4.1.1	Absorption with Non-Catalytic Equilibrium Reactions	71
2.4.1.2	Reactions of Dissolved Gas Components with the Liquid in the Presence of Catalyst Particles	77
2.4.2	Reactions in Gas-Liquid-Liquid Systems with Two Immiscible Liquid Phases	78
	Notation	82
	References to Chapter 2	84
3.	Flow of Phases in Gas-Liquid Reactors	86
3.1	Ideal and Non-Ideal Flow	91
3.2	Modelling of Non-Ideal Flow in Gas-Liquid Systems and Experimental Determination of its Characteristics	96
3.2.1	Non-Ideal Flow Models	96
3.2.1.1	Differential Models	96
3.2.1.2	Discrete Models	102
3.2.2	Experimental Determination of Backmixing Characteristics	111
3.2.2.1	Stationary Method	113
3.2.2.2	Dynamic Methods	114
3.2.2.3	Experimental Procedures	115
3.2.2.4	Evaluation of Mixing Models Parameters	118
3.3	Experimental Characteristics of Backmixing in Various Types of Gas-Liquid Reactors	130
3.3.1	Film Reactors	131
3.3.1.1	Trickle-Bed Reactors	132
3.3.1.2	Annular-Flow Reactors	138
3.3.2	Reactors with Dispersed Gas Phase	138
3.3.2.1	Single-Stage Bubble Column Reactors	140
3.3.2.2	Horizontal Sparged Reactors	179
3.3.2.3	Multistage Bubble Column Reactors	181
3.3.2.4	Packed Bubble Column Reactors	199
3.3.2.5	Tower Reactors with Circulating Liquid Phase	214
3.3.2.6	Mechanically Stirred Reactors	222
3.3.3	Spray Reactors	226
3.4	The Effect of Gas and Liquid Phase Macromixing on Conversion and Selectivity of Gas-Liquid Reactions	230
	Notation	235
	References to Chapter 3	238
4.	Characteristics of Reactors with Dispersed Gas Phase	244
4.1	Reactors with Power Input Due to Gas Compression	246
4.1.1	Evaluation of the Present State of the Art on Bubble Bed Hydrodynamics	246

4.1.1.1	Bubbling Regimes	248
4.1.1.2	Bubble Size	250
4.1.1.3	Gas Holdup	254
4.1.1.4	Interfacial Mass Transfer	260
4.1.2	Energy Dissipation in Bubble Beds	266
4.1.3	Gas Holdup	269
4.1.3.1	Turbulent Bubbling Regime	269
4.1.3.2	Homogeneous Bubbling Regime	270
4.1.4	Interfacial Area	271
4.1.4.1	Homogeneous Bubbling Regime	272
4.1.4.2	Turbulent Bubbling Regime	276
4.1.5	Mass Transfer from Bubbles to the Liquid Phase	279
4.1.5.1	Mass Transfer Coefficient in the Liquid Film Adjacent to a Bubble	280
4.1.5.2	Volumetric Liquid-Side Mass Transfer Coefficient	283
4.1.5.3	Effect of Surface Active Additives on k_L	284
4.1.6	Plate Columns	286
4.1.7	Reactors with Natural Circulation	289
4.1.7.1	Liquid Velocity in Air-Lift Reactors	290
4.1.7.2	Gas Holdup in Aerated Sections of Air-Lift Reactors	293
4.1.7.3	Mass Transfer and $k_L a$ in Air-Lift Reactors	296
4.1.7.4	Mixing Time	298
4.1.7.5	Heat Transfer in Air-Lift Reactors	299
4.2	Reactors with Power Input from Liquid Pumping	300
4.2.1	Hydrodynamic and Mass Transfer Characteristics of Bubble Beds in Ejector-Distributor Reactors	301
4.2.2	Energy Effectiveness of Phases Contacting in Units with Sieve-Tray and Ejector-Type Gas Distributors	307
4.3	Reactors with Power Input by Mechanically Driven Insertions	309
4.3.1	Working Characteristics of Aerated Stirred-Tank Reactors	313
4.3.2	Gas Holdup in Aerated Mixing Vessels	315
4.3.3	Interfacial Surface Area	319
4.3.4	Volumetric Liquid-Side Mass Transfer Coefficient	321
4.3.5	The Effect of Reactor Construction on Hydrodynamic and Transport Characteristic of Mechanically Agitated Bubble Beds	327
4.3.5.1	Reactors with Multiple Impellers	327
4.3.5.2	Mechanically Agitated Draught Tube Reactors	328
4.3.5.3	Multistage Mechanically Agitated Reactors	330
	Notation	332
	References to Chapter 4	334
	5. Criteria for Reactor Type Selection	340
5.1	Minimization of Reactor Volume	340
5.1.1	Heterogeneous Reaction Kinetics as the Decisive Parameter for Reactor Type Selection and for Calculation of Reactor Volume	342
5.1.1.1	Reactions Occurring in the Bulk Liquid Phase	344
5.1.1.2	Reactions Occurring in Liquid Film	346
5.1.1.3	General Principles of Reactor Selection on the Basis of Reaction Kinetic	346
5.1.2	Reactor Selection on the Basis of Flow Patterns Consideration	353

5.1.2.1	Calculation of Reactor Height for Ideal Flow of Both Phases	353
5.1.2.2	Calculation of Reactor Height for Non-Ideal Flow of Phases	358
5.1.3	Minimization of Reactor Volume for Cases of Unknown Reaction Kinetics . . .	367
5.1.4	Reactor Selection on the Basis of Volume Calculation	367
5.2	Minimization of Energy Supply	368
5.2.1	Reactor Selection According to Mimimum Energy Input	369
5.2.2	Reactor Selection According to Maximum Energetic Efficiency of Phase Contacting	370
5.2.2.1	Utilization of Dissipated Energy for Gas Dispersion	372
5.2.2.2	Overall Energy Effectiveness of Gas-Liquid Reactors	383
Notation	389
References to Chapter 5	391
Author Index	393
Subject Index	400
