

Content

Introduction	5
1. Hydroclimate and Temperature Co-variability – Past, Present and Future	6
1.1. Introduction	6
1.2. A too-simplified picture	7
1.3. The need for a longer perspective	8
2. Frontiers in Tree-ring Research with a Special Emphasis on the Black Death	11
2.1. Introduction	11
2.2. On the cross-disciplinary potential of dendroecology to illuminate the Black Death	12
2.3. Conclusions	17
3. How is Drought Affecting Forest Growth and How Can Stable Isotopes Contribute to Answer this Question?	21
3.1. Introduction	21
3.2. Materials and methods	21
3.3. Results	22
3.4. Discussion	23
4. Drivers of the Soil Moisture Trends in the Czech Republic between 1961 and 2012	26
4.1. Introduction	26
4.2. Data and Methods	26
4.3. Results	27
4.4. Discussion	28
5. A Satellite-based Composite Index Approach for Agricultural Drought Monitoring – Current Work and Future Directions	30
5.1. Introduction	30
5.2. Data and Methods	31
5.3. Operational VegDRI and Results	32
5.4. Discussion	33
6. Lessons Learned in Monitoring and Predicting Hydroclimatic Extremes in the Greater Horn of Africa	36
6.1. Introduction	36
6.2. Model Development Plan and Activities	37
6.3. Lessons Learned: preliminary assessment	39
6.4. Future plans	40
6.5. Conclusion	40
7. Monitoring of Water Use, Drought and Yield Impacts Using Imagery from Multiple Satellites	42
7.1. Introduction	42
7.2. Data and Methods	43
7.3. Preliminary applications over the Czech Republic	43
7.4. Discussion and Next Steps	45
8. The Role of Remote Sensing for Regional Monitoring of U.S. Crop Conditions and Yield	47
8.1. Introduction and background	47
8.2. Methods	48
8.3. Results	50
8.4. Discussion and Conclusions	52

9. Alternative Method for Remote Sensing of Evapotranspiration: The Operational Simplified Surface Energy Balance (SSEBop) Approach and its Applications	54
9.1. Introduction	54
9.2. Materials and methods	55
9.3. Results	56
9.4. Discussion	58
10. Improving Agricultural Drought Indicators – How Satellite–derived Soil Moisture Can Fill the Gap	60
10.1. Introduction	60
10.2. Operational Drought Indices	61
10.3. Other Operational Indicators	62
10.4. Strengths and Limitations of Satellite–derived Soil Moisture	63
10.5. Microwave Remote Sensing	63
10.6. Combining Technologies	63
10.7. Extending the ESA CCI SM Dataset with Near Real–time Observations	64
10.8. Conclusions	64
11. Recent Lessons in Drought Risk Management	69
11.1. Introduction	69
11.2. Drought Risk Management	69
11.3. Recent Lessons for Drought Risk Management	70
11.4. Case Studies and Examples	71
11.5. Conclusion	75
12. Colorado’s Drought Mitigation and Response Plan: Using Actionable Science to Inform Drought Policy, Planning and Preparedness in Colorado	77
12.1. Introduction	77
12.2. Plan Components	78
12.3. Monitoring	78
12.4. Mitigation	78
12.5. Response Framework	79
12.6. Vulnerability Assessment	81
12.7. Climate Change Analysis	82
12.8. Integration with broader planning processes	83
12.9. Discussion	83
13. The European Drought Observatory – Current Status and Future Directions	84
13.1. Edo concepts	84
13.2. Input data and derived indices	85
13.3. Edo web–portal interfaces and structure	88
13.4. Conclusions and outlook	90
14. Exploring drought controls on spring phenology	92
14.1 Introduction	92
14.2 Data and Methods	92
14.3 Results	94
14.4 Discussion	94
