1	Basic Concepts of Love in Evolutionary Perspectives	1
1.1	What Researchers Study When We Study <i>Love</i>	1
1.1.1	Love Is What People Think Love Is	1
1.1.2	The Concepts That Researchers Consider as Love	3
1.2	What Is Love Conceptually and Factually?	6
1.2.1	Conceptual Definitions of Love	6
1.2.2	What Is Love Factually?	8
1.3	How Researchers Study Love Traditionally and Evolutionarily	9
1.3.1	Research Methods to Study Love	9
1.3.2	The Challenges and Opportunities to Study Love Evolutionarily	12
	References	16
2	Basic Foundations of the Biological Evolution of Love	19
2.1	Major Principles of Biological Evolution	19
2.1.1	The Scientific Value of Evolutionary Perspectives	19
2.1.2	Basics of Biological Evolution	21
2.1.3	Who Evolves in Biological Evolution	22
2.1.4	Developmental and Evolutionary Processes	24
2.2	How Biological Evolution Works	25
2.2.1	Basic Needs and Affordances of Animals	25
2.2.2	The Biological Adaptation to Environment	28
2.2.3	Natural Selection of Individuals and Traits in Biological Evolution	30
2.3	Evolutionary Coexistence, Competition, and Cooperation	31
2.3.1	Resources and Coexistence of Species and Individuals in Habitat	31
2.3.2	Competitive Relationships in Habitat	32
2.3.3	Symbiotic Cooperative Relationships in Habitat	33
2.3.4	Cooperative Relationships in Habitat	34

2.3.5	How Competition and Cooperation Lead to the Evolution of Hate and Love	37
2.4	How Organisms Navigate Their Relationships With Others in Nature	38
2.4.1	Nature Is the World of Diversity and Homogeneity	38
2.4.2	Genotypical and Phenotypical Similarities and Differences Among Organisms	39
2.4.3	How Animals Recognize and Categorize Others	41
2.4.4	Imprinting of Phenotypes in Animals' Social Recognition	45
2.5	How Animals Learn to Love Others	47
2.5.1	Birds and Animals Tend to Love Those Who Looks Familiar	47
2.5.2	Who and How Animals Learn to Love from Their Experiences	50
2.5.3	Animals Tend to Love Those Who Are Associated With Something Good	51
2.5.4	Animals Tend to Love Those Who Reward Them	52
2.5.5	Learning to Love Due to Social Learning by Observation	54
2.5.6	Basic Types of Love and Their Evolutionary Driving Forces	56
	References	58
3	How Bodily and Nervous Systems Enable Love	69
3.1	How Bodies and Brains Evolved and Developed the Ability to Love	69
3.1.1	An Overview of the Evolution of Physiological and Neural Systems	69
3.1.2	Brain Regions Involved in Experiencing Different Types of Love	72
3.1.3	Role of the Endocrine System in the Evolution of Love	75
3.2	Chemical Messengers of Love: How They Work in the Body and Brain	76
3.2.1	Neurotransmitters, Peptides, and Hormones of Prosocial Emotions	76
3.2.2	Chemical Patterns of Love as Interpersonal Bonding	78
3.2.3	Hormones of Sexual Love	81
3.2.4	Hormones of Passionate Love	83
3.2.5	How Hormones Make Us in the Mood for Love	84
3.3	How Peripheral Nervous System Evolved to Enable Love	85
3.3.1	The Peripheral Nervous System Processes Involved in Experiencing Love	85
3.3.2	Somatic Experiences of Love	86

3.3.3	How the Autonomic Nervous System Enabled Mammals to Love	87
