Preface		ix
Chapter 1	Behavioral Analysis of Trajectory Formation: The Speed-Accuracy Trade-Off as a Tool to Understand Strategies of Movement Control	1
	<i>Kyoung-nae Kim, Monique McMillan, Howard N. Zelaznik</i>	
	Woodworth (1899)	2
	Fitts' Law and the Linear Speed-Accuracy Trade-Off	3
	Processes in Motor Development	4
	Linear Speed-Accuracy Trade-Off and Trajectory Formation	6
	Summary and Recommendations	10
	References	10
Chapter 2	Reaction Time Analysis of Central Motor Control	13
	<i>Stuart T. Klapp</i>	
	Foundation Concepts	13
	Case 1: Response Complexity Influences Choice RT More Than Simple RT	15
	A Theory for Case 1	21
	Methodology	24
	Case 2: Response Complexity Influences Simple RT More Than Choice RT	26
	What Determines Whether Case 1 or Case 2 Applies	28
	Theoretical Interpretation for Contrasting Cases	29
	Conclusion	31
	References	31
Chapter 3	Information Feedback for Motor Skill Learning: A Review	37
	<i>Stephan P. Swinnen</i>	
	What Is Learned?	37
	How Does Learning Occur? On the Necessity of Augmented Information Feedback	38
	Changing Viewpoints About the Role of KR Through the History of Motor Learning Research: The Guidance Hypothesis	42

	Searching for a Balance Between the Positive and Negative Effects of KR	51
	KR in Relation to Other Sources of Information Feedback	54
	Future Developments in the Study of Augmented Information Feedback: Some Speculations	56
	Conclusion	60
	References	60
Chapter 4	Neural Basis of Motor Learning in Humans	67
	<i>Charles J. Worringham, Ann L. Smiley-Oyen, Carol L. Cross</i>	
	Cerebral Cortex	69
	Cerebellum	71
	Basal Ganglia	76
	Conclusions	80
	References	83
Chapter 5	Visual Control of Prehension	87
	<i>Melvyn A. Goodale and Philip Servos</i>	
	Elements of Prehension	88
	Sources of Visual Information	95
	Perception Versus Action	105
	The Future	114
	References	115
Chapter 6	Electromyographic Analysis of Performance Enhancement	123
	<i>Daniel M. Corcos, Slobodan Jaric, Gerald L. Gottlieb</i>	
	Dual-Strategy Hypothesis of Motor Control and Performance Enhancement	124
	Performance Enhancement in Different Groups of Individuals	138
	Performance Enhancement in Multidegree-of-Freedom Movements	143
	Conclusion	149
	References	149
Chapter 7	Dynamic Pattern Perspective of Rhythmic Movement: An Introduction	155
	<i>Stephen A. Wallace</i>	
	Introduction to Nonlinear Behavior	155
	Brief Historical Perspective on Self-Organization in Complex Systems	161
	Dynamic Pattern Perspective in the Coordination of Movement	168
	Conclusions: Exploring Your System	189
	References	191

Chapter 8	Dynamical Perspective on Motor Learning <i>R.C. Schmidt, Paula Fitzpatrick</i>	195
	Information-Processing, Connectionist, and Dynamical Theories of Behavioral Control	195
	Dynamical Theory of Motor Control	199
	Dynamical Theory of Motor Learning	203
	Dynamical Models of Skill Learning	206
	Summary	218
	References	219
Chapter 9	Trajectory Formation in Arm Movements: Minimization Principles and Procedures <i>Mitsuo Kawato</i>	225
	Approaches to Resolving Ill-Posed Problems	228
	Invariant Features of a Multijoint Arm Trajectory	230
	Minimum Jerk Model	233
	Minimum Torque Change Model	235
	Minimum Muscle Tension Change Model	240
	Minimum Motor Command Change Model	242
	Neural Network Models	245
	Conclusion	255
	References	255
Chapter 10	Neural Network Modeling of Sensory-Motor Control in Animals <i>Daniel Bullock, Stephen Grossberg, Frank Guenther</i>	261
	Integrative Example: Reaching to a Visible Target, or How Light Gets Into the Muscles	262
	Forming a Head-Centered Representation of Target Position	264
	Forming a Body-Centered Representation of Target Position	268
	DIRECT: Trajectory Formation and Inverse Kinematics	273
	FLETE: Accurate Reaching Despite Variations in Tension	279
	Concluding Remarks	285
	References	286
	Appendix	290
