<b>Foreword</b> .....	<b>xiii</b>
<b>Preface</b> .....	<b>xv</b>
<b>Author</b> .....	<b>xvii</b>
<b>Chapter 1</b> <b>Basic Rolling Bearing Theory</b> .....	<b>1</b>
1.1    Introduction.....	1
1.2    Rolling Bearing Types .....	3
1.3    Lubrication Methods for Rolling Bearings.....	3
1.4    Rolling Bearing Materials.....	6
1.5    Rolling Bearing Selection.....	6
1.6    Internal Speeds in Simple Rolling Motion .....	7
1.6.1    Basic Rolling Bearing Geometry .....	7
1.6.2    Internal Speeds in Pure Rolling .....	7
1.6.3    Sliding in Rolling Bearings.....	9
1.7    Internal Load Distribution .....	11
1.7.1    Radially Loaded Bearings.....	13
1.7.2    Sjövall Integral Tabulation for Combined Loading .....	14
1.7.3    Simple Computer Program for Load Distribution .....	15
1.8    Contact Pressures and Stresses .....	19
1.8.1    Hertz Theory – Normal Stationary Elastic Contacts.....	19
1.8.2    Subsurface Stresses .....	23
1.8.3    Non-Hertzian Elastic Contact – Normal and Tangential Loading .....	24
1.9    Surface Temperatures – Frictional Heating .....	25
1.9.1    Moving Heat Source on a Half-Space .....	25
1.9.2    Analytical Solutions for Average and Maximum Surface Temperatures.....	27
1.9.3    General Numerical Solution for Temperatures in Frictional Heating .....	29
1.10    Rolling Bearing Lubrication .....	33
1.10.1    Numerical Solution of the EHL problem.....	36
1.10.2    The Ertel-Grubin Approximated Solution .....	36
1.10.3    Film Thickness Equations.....	40

1.10.4	Film Thickness Calculation Example in a Rolling Bearing.....	41
1.10.5	Film Thickness Reduction Factors.....	44
1.10.6	Grease Lubricated Ball Bearings.....	48
1.10.7	Surface Roughness.....	49
1.10.8	Lubrication Quality in Rolling Bearings.....	51
1.11	Rolling Bearing Lubrication with Media Dilution.....	52
1.12	Discussion.....	54
<b>Chapter 2</b>	<b>Classical Theories of Rolling Bearing Life.....</b>	<b>58</b>
2.1	Introduction.....	58
2.2	Weibull Statistics and Testing.....	60
2.2.1	Weibull Theory of Strength of Materials.....	60
2.2.2	Weibull Probability Distribution.....	62
2.2.3	Reformulation of Weibull Equation for Survival Calculation.....	64
2.2.4	Two or Three Parameters Weibull Distribution?.....	65
2.2.5	Testing Rolling Bearings.....	66
2.3	Lundberg and Palmgren.....	69
2.3.1	Bearing Life Concept.....	69
2.3.2	Relevant Parameters in Bearing Life.....	69
2.3.3	Lundberg-Palmgren Theory.....	70
2.4	Dynamic Load Rating for other Values of $L$ .....	76
2.5	Lubrication Effects and Tallian's Contributions.....	77
2.6	Ioannides and Harris.....	79
2.6.1	Stress-Based Model.....	79
2.6.2	The Composed Life in a Rolling Bearing.....	81
2.6.3	Load-Based Model.....	82
2.7	ISO Models.....	84
2.7.1	ISO 281:2007.....	84
2.7.2	ISO 16281:2025.....	85
2.7.3	Lubrication Quality for ISO 281 and ISO 16281.....	85
2.8	Discussion.....	85
<b>Chapter 3</b>	<b>Generalized Bearing Life Model (GBLM).....</b>	<b>89</b>
3.1	Separation of Surface Survival.....	89
3.1.1	Relative Surface Fatigue Index.....	91
3.2	Solution for the Subsurface Integral.....	92
3.3	Solution for the Surface Integral.....	92
3.4	Simplified Surface Solution.....	94
3.4.1	Calibration of Constants with Endurance Testing.....	96
3.5	Application to Hybrid Rolling Bearings.....	97
3.6	Other Application Examples.....	98

	3.6.1	Sporadic Indentations.....	99
	3.6.2	Frictional Heating Damage .....	100
	3.6.3	General Contacts and Gears.....	103
	3.7	Discussion.....	103
<b>Chapter 4</b>		<b>Micro-Elastohydrodynamic Lubrication and Roughness Effects.....</b>	<b>106</b>
	4.1	Introduction.....	106
	4.2	Stochastic Models of Roughness in Lubrication .....	108
	4.2.1	Analytical Flow Factors for Striated Roughness ...	110
	4.2.2	Analytical Flow Factors for General Roughness ...	114
	4.2.3	The Peklenik Anisotropy Index for Roughness .....	115
	4.2.4	Surface Analysis Examples.....	116
	4.3	Deterministic Models for Roughness in Lubrication.....	118
	4.3.1	Transverse Sinusoidal and “Real” Stationary Roughness .....	118
	4.3.2	Non-Newtonian Effects.....	126
	4.3.3	Modification for Hydrodynamic Lubrication.....	127
	4.3.4	Amplitude Reduction Theory .....	127
	4.3.5	Rapid Methods for Micro-EHL .....	129
	4.3.6	Dry Contact Model for Roughness .....	133
	4.3.7	Partial (Mixed) Lubrication Modification.....	136
	4.3.8	Surface Temperatures with Micro-Geometry .....	138
	4.3.9	Application Examples: Indentations and Surface Features .....	139
	4.4	Discussion.....	142
<b>Chapter 5</b>		<b>Mild Wear with Micro-Geometry.....</b>	<b>148</b>
	5.1	Introduction.....	148
	5.2	General Archard Model .....	148
	5.3	Mild Wear in Partial Lubrication .....	150
	5.4	Model Validation .....	151
	5.5	Application Examples.....	152
	5.5.1	Structured Surface Example .....	152
	5.5.2	Indentation with Real Roughness Example .....	154
	5.6	Discussion.....	156
<b>Chapter 6</b>		<b>Surface Distress .....</b>	<b>158</b>
	6.1	Basic Mechanisms .....	158
	6.2	Main Influencing Factors .....	159
	6.3	Model for Surface Distress .....	162
	6.3.1	Dang Van Fatigue Criterion .....	163
	6.3.2	Stress History Calculation.....	165

6.4	Validation .....	166
6.5	Application Examples.....	169
6.5.1	Wear Effects Around Indentations .....	169
6.5.2	Film Thickness Influence on Surface Distress .....	170
6.6	Electrical Damage Effects .....	174
6.6.1	Frosting .....	175
6.6.2	Electrical Capacitance in a Rolling Bearing .....	177
6.6.3	Fluting .....	177
6.6.4	Interaction with Fatigue .....	178
6.7	Discussion.....	178
<b>Chapter 7</b>	<b>Wear – Fatigue Interaction .....</b>	<b>182</b>
7.1	Basic Mechanism.....	182
7.2	Adhesive Wear Model.....	182
7.3	Abrasive Wear Model .....	183
7.4	Model Wear – Fatigue.....	184
7.5	Validation.....	186
7.6	On the Archard Wear Coefficient .....	189
7.7	Application Example .....	189
7.8	Application Example: Small Amplitude Oscillatory Contacts .....	193
7.8.1	Incipient Sliding.....	193
7.9	Discussion.....	197
<b>Chapter 8</b>	<b>Spall Propagation.....</b>	<b>199</b>
8.1	Model.....	201
8.2	Validation.....	202
8.2.1	Experiments .....	202
8.2.2	Simulations .....	205
8.3	Application Example .....	208
8.3.1	Spall Growth in a Deep Groove Ball Bearing.....	208
8.3.2	Effect of the Load Sequence .....	209
8.4	Discussion.....	212
<b>Chapter 9</b>	<b>Pitting Corrosion .....</b>	<b>215</b>
9.1	Introduction.....	215
9.2	Engineering Model for Pitting Corrosion .....	216
9.2.1	Nucleation Model.....	217
9.2.2	Modelling Corrosion Pitting .....	219
9.3	Spall Generation and Propagation .....	220
9.3.1	Example of Spall Propagation .....	221
9.4	Parametric Investigation for Spall Propagation .....	222
9.4.1	Practical Use of Results .....	225

	9.5	Surface Distress Influenced by Corrosion .....	227
	9.6	Application Example .....	227
	9.7	Discussion.....	228
<b>Chapter 10</b>		<b>Particle Entrapment and Damage .....</b>	<b>230</b>
	10.1	Particle Entrapment .....	230
	10.1.1	Non-Spherical Particles .....	233
	10.2	Indentation Process.....	234
	10.2.1	Particle Deformation Model .....	234
	10.2.2	Elastic-Plastic Model .....	237
	10.2.3	Indentation of Particles .....	238
	10.2.4	Model Validation.....	239
	10.3	Damage Effects.....	242
	10.3.1	Engineering Model.....	243
	10.3.2	Elongated Indentations, Scratches or Grooves .....	245
	10.3.3	Roughness Effects on Indentations .....	245
	10.4	Diagnosis via Inspection.....	246
	10.4.1	Life Ratio Calculation.....	247
	10.4.2	Diagnosis Methodology .....	247
	10.4.3	Application Example of Step 5 .....	249
	10.5	Discussion.....	253
<b>Chapter 11</b>		<b>Frictional Heating Damage and Seizure.....</b>	<b>256</b>
	11.1	Transition Diagrams in EHL and Rolling Bearings.....	256
	11.2	Micro-Geometry Model for Thermal Damage .....	260
	11.2.1	Frictional Heating Softening Damage .....	260
	11.2.2	Concurrent Surface Distress and Frictional Heating Damage.....	261
	11.3	Model Validation .....	262
	11.4	Application Examples.....	264
	11.4.1	Transition Diagram Calculation.....	264
	11.4.2	Concurrent Surface Fatigue and Frictional Heating Damages .....	266
	11.5	Discussion.....	269
<b>Chapter 12</b>		<b>Inclusions and Grain Effects.....</b>	<b>272</b>
	12.1	Lubrication Effects of Near-Surface Inhomogeneities .....	273
	12.2	Surface Elastic Deformations with Near-Surface Inhomogeneities.....	274
	12.3	Dry Contact Stress Effects of Inclusions .....	276
	12.4	Application Examples.....	276
	12.5	Effects of Grains on Fatigue .....	278
	12.6	Discussion.....	279

<b>Chapter 13</b>	<b>Perspectives and Future Work</b> .....	282
	13.1 Lubrication Conditions .....	283
	13.2 Energy Consumption .....	284
	13.3 Bearing Life Estimation.....	285
	13.4 Low and High Speeds .....	286
	13.5 High Temperatures.....	287
	13.6 Environment Effects .....	287
	13.7 High Loads.....	288
	13.8 Dynamic Conditions .....	288
<b>Appendix A</b>	<b>MATLAB or GNU OCTAVE Programs</b> .....	290
	A.1 Calculation of a Rolling Bearing Internal Load Distribution, Chapter 1 .....	291
	A.2 Calculation of Hertz Pressure and Contact Dimensions, Chapter 1.....	297
	A.3 Calculation of Subsurface Stresses on a Plane from a Hertzian Pressure, Chapter 1 .....	300
	A.4 Calculation of Surface Temperatures for a Moving Uniform Squared Heat Source, Chapter 1 .....	303
	A.5 Calculation of the Dimensionless Central Film Thickness from Ertel-Grubin Method, Chapter 1.....	305
	A.6 Calculation of Effect of Kinematic Starvation in an EHL Contact, Chapter 1 .....	308
	A.7 Plotting Weibul Cumulative, Density and Reliability Functions, Chapter 2.....	310
	A.8 Calculation of the Dynamic Capacity of a Bearing, Chapter 2.....	312
	A.9 Calculation of Real Roughness Parameters of a Surface, Chapter 4.....	317
	A.10 Calculation of Real Roughness Pressure and Clearance Fluctuation in an EHL Pure Sliding Contact, Chapter 4 ....	321
	A.11 Dry Contact Solution for 1-D Problems using FFT, Chapter 4.....	325
	<b>References</b> .....	333
	<b>Index</b> .....	351
