| Editor Biographies .....   | xv    |
| List of Contributors .....   | xxi   |
| Preface.....   | xxv   |
| Foreword .....   | xxvii |
| Acknowledgments.....   | xxix  |
| <br>   |       |
| <b>Chapter 1</b> Circular Economy for Energy Materials—State-of-the-Art<br>Initiatives and Regulatory Issues ..... | 1     |
| <i>Harjit Kaur and Nidhi Singhal</i>   |       |
| 1.1 Introduction to Circular Economy and Energy Materials.....   | 1     |
| 1.1.1 Definition, Principles and Implementation Strategies.....  | 3     |
| 1.1.2 Principles of Circular Economy .....   | 5     |
| 1.1.3 Circular Economy Processes or Strategies.....  | 8     |
| 1.1.4 Evolution and Global Adoption of Circular<br>Economy Concepts.....   | 9     |
| 1.1.5 Circular Economy in Various Industries.....  | 10    |
| 1.2 The Energy Sector and Its Environmental Impact.....  | 11    |
| 1.2.1 Overview of the Energy Sector .....  | 11    |
| 1.2.2 Environmental Challenges and Sustainability Issues ....  | 12    |
| 1.2.3 Role of Circular Economy in Addressing Energy<br>Sector Challenges .....                                     | 12    |
| 1.3 Importance of Circular Economy in the Energy Sector.....   | 13    |
| 1.3.1 Resource Scarcity and Energy Security .....  | 13    |
| 1.3.2 Reducing Environmental Footprint and Emissions ...   | 13    |
| 1.3.3 Transition to a Sustainable and Resilient Energy<br>System .....   | 14    |
| 1.4 Circular Economy Approaches in the Energy Sector.....  | 15    |
| 1.4.1 Energy Material Efficiency and Optimization.....   | 15    |
| 1.4.2 Renewable Energy and Circular Systems.....   | 15    |
| 1.4.3 Energy Storage and Circular Solutions .....  | 16    |
| 1.4.4 Circular Economy in Fossil Fuel Industries.....  | 16    |
| 1.5 Circular Economy and the Energy Transition .....   | 17    |
| 1.5.1 Role of Circular Economy in the Shift to<br>Clean Energy .....   | 18    |
| 1.5.2 Circular Economy and Decentralized Energy<br>Systems.....  | 18    |
| 1.5.3 Circular Economy and Circular Cities .....   | 19    |
| 1.6 Barriers and Challenges in Implementing Circular<br>Economy in the Energy Sector.....                          | 19    |
| 1.6.1 Technological and Infrastructural Challenges .....   | 19    |
| 1.6.2 Policy and Regulatory Barriers.....  | 20    |

|                  |       |   |           |
|------------------|-------|---|-----------|
|                  | 1.6.3 | Financial and Economic Implications.....  | 20        |
|                  | 1.6.4 | Stakeholder Engagement and Collaboration<br>Challenges .....  | 21        |
|                  | 1.7   | Conclusion .....  | 21        |
| <b>Chapter 2</b> |       | <b>Circular Economy: An Industrial Perspective for<br/>Sustainable Future .....</b>   | <b>25</b> |
|                  |       | <i>Amandeep Kaur, Sandeep Singh, Niraj Bala, Surinder Singh,<br/>and Sushil Kumar Kansal</i>                                    |           |
|                  | 2.1   | Concept of Circular Economy .....   | 25        |
|                  | 2.2   | Difference between Linear Economy and Circular<br>Economy .....   | 27        |
|                  | 2.3   | Relationship between Circular Economy and Sustainable<br>Development.....   | 30        |
|                  | 2.4   | Principles for a Sustainable Circular Economy.....  | 34        |
|                  | 2.4.1 | Concurrent Efforts to Sustain the Economy to Raise<br>Living Amenities under Environmental Constraints .....                    | 34        |
|                  | 2.4.2 | Equity between Generations .....  | 35        |
|                  | 2.4.3 | An Integrated Viewpoint: Environmental, Economic,<br>and Human Systems Connecting the Local and<br>International Platforms..... | 36        |
|                  | 2.4.4 | A Change in Social Principles Is Required to<br>Maintain Equilibrium between Economy and<br>Environment.....                    | 36        |
|                  | 2.4.5 | Utilizing Resources Sustainably, Leaving the<br>Linear Economy, and Instead Developing a<br>“Resource Flowing Society” .....    | 36        |
|                  | 2.4.6 | Sustainable Assets, or the Sum of Human-Made<br>and Environmental Capital, Does Not Deteriorate<br>with Time .....              | 37        |
|                  | 2.4.7 | Cooperative Change .....  | 37        |
|                  | 2.4.8 | Execution Is Context Dependent.....   | 38        |
|                  | 2.5   | Circular Economy as a Promoter of Sustainable<br>Development in Business Management.....  | 38        |
|                  | 2.5.1 | Strategic Planning (SP) .....   | 39        |
|                  | 2.5.2 | Cost Management (CM).....   | 40        |
|                  | 2.5.3 | Circular Supply Chain Management (CSCM) .....   | 40        |
|                  | 2.5.4 | Quality Management (QM).....  | 41        |
|                  | 2.5.5 | Environmental Management (EM) .....   | 41        |
|                  | 2.5.6 | Process Management (PM) .....   | 42        |
|                  | 2.5.7 | Logistics and Reverse Logistics (L&RL).....   | 42        |
|                  | 2.5.8 | Service Management (SM).....  | 43        |
|                  | 2.5.9 | Research and Development (R&D).....   | 44        |
|                  | 2.6   | Conclusions.....  | 44        |

|                  |  |    |
|------------------|--|----|
| <b>Chapter 3</b> | Lithium as New Gold for Advanced Energy Material, Availability in Nature, Recovery from Waste, and Sustainability..... | 51 |
|                  | <i>Majeti Narasimha Vara Prasad and Chanchal Kumar Mitra</i>   |    |
| 3.1              | Introduction .....   | 51 |
| 3.2              | Circular Economy.....  | 52 |
| 3.3              | Energy as a Material Resource.....   | 54 |
| 3.4              | Costs Associated with Energy Production .....  | 54 |
| 3.5              | Lithium in Energy Storage .....  | 56 |
| 3.6              | Lithium Battery .....  | 56 |
|                  | 3.6.1 How Does a Typical Battery Work?.....  | 56 |
|                  | 3.6.2 Why Lithium?.....  | 58 |
| 3.7              | Where the Lithium Comes From.....  | 60 |
|                  | 3.7.1 Lithium and Health .....   | 66 |
|                  | 3.7.2 Lithium Production .....   | 68 |
| 3.8              | Lithium Recycling .....  | 69 |
| 3.9              | Conclusions and Other Considerations.....  | 70 |
| <b>Chapter 4</b> | Photocatalytic Materials for Production of Hydrogen from Water Using Solar Energy .....                                | 77 |
|                  | <i>Nandana Chakinala, Praveen K. Surolia, Raksh Vir Jasra, and Anand G. Chakinala</i>                                  |    |
| 4.1              | Introduction .....   | 77 |
| 4.2              | Fundamental and Thermodynamic Aspects.....   | 78 |
| 4.3              | Performance Measurement of an Efficient Photocatalyst .....  | 80 |
| 4.4              | Photocatalytic Water-Splitting Methods .....   | 80 |
|                  | 4.4.1 Heterogeneous Photocatalytic Water Splitting.....  | 81 |
|                  | 4.4.2 Homogeneous Photocatalysis .....   | 86 |
|                  | 4.4.3 Hybrid Photocatalysis.....   | 86 |
| 4.5              | Strategies for the Modification of Photocatalysts.....   | 87 |
|                  | 4.5.1 Doping of Metals and Non-Metals.....   | 87 |
|                  | 4.5.2 Semiconductor Composite Formation.....   | 88 |
|                  | 4.5.3 Introduction of Porosity.....  | 89 |
|                  | 4.5.4 Controlled Size and Shape Synthesis .....  | 89 |
|                  | 4.5.5 Defect Engineering.....  | 89 |
|                  | 4.5.6 Bionic Engineering.....  | 90 |
|                  | 4.5.7 Sensitization of Semiconductor .....   | 90 |
| 4.6              | Challenges of Photocatalytic Water Splitting.....  | 90 |
|                  | 4.6.1 Energy Losses, Low Quantum Efficiency.....   | 90 |
|                  | 4.6.2 Product Separation .....   | 91 |
|                  | 4.6.3 Mass Transfer Limitations .....  | 91 |
|                  | 4.6.4 Utilizing Incident Photon Energy Efficiently.....  | 91 |
|                  | 4.6.5 Minimizing the Use of Sacrificial Reagents .....   | 92 |

|                  |        |   |            |
|------------------|--------|---|------------|
|                  | 4.6.6  | Addressing Fresh Water Availability .....   | 92         |
|                  | 4.6.7  | Reactor Configurations.....   | 92         |
| 4.7              |        | Integrating Circular Economy Principles in Photocatalytic<br>Water Splitting.....   | 93         |
| 4.8              |        | Future Outlook .....  | 94         |
| <b>Chapter 5</b> |        | <b>Valorization of Lignocellulosic Biomass into High-Value<br/>Chemicals: Forging a Route towards the Circular Economy .....</b>                                | <b>98</b>  |
|                  |        | <i>Mangat Singh, Sahil Kumar, Hadi Ali, Surinder Singh,<br/>and Sushil Kumar Kansal</i>   |            |
| 5.1              |        | Introduction .....  | 98         |
|                  | 5.1.1  | Structure of Plant Cell Wall .....  | 100        |
| 5.2              |        | Composition of Lignocellulosic Biomass .....  | 100        |
|                  | 5.2.1  | Cellulose.....  | 100        |
|                  | 5.2.2  | Hemicellulose.....  | 102        |
|                  | 5.2.3  | Lignin .....  | 103        |
|                  | 5.2.4  | Extractives.....  | 105        |
|                  | 5.2.5  | Ash and Minerals .....  | 106        |
| 5.3              |        | Valorization of Lignocellulosic Biomass.....  | 107        |
|                  | 5.3.1  | Pre-Treatment of Biomass .....  | 107        |
| 5.4              |        | Platform Chemicals from Biomass.....  | 108        |
|                  | 5.4.1  | Furfural .....  | 108        |
|                  | 5.4.2  | Hydroxymethylfurfural .....   | 109        |
|                  | 5.4.3  | Glycerol .....  | 110        |
|                  | 5.4.4  | 2,5-Furandicarboxylic Acid .....  | 111        |
|                  | 5.4.5  | Lactic Acid .....   | 112        |
|                  | 5.4.6  | Succinic Acid .....   | 113        |
|                  | 5.4.7  | Levulinic Acid.....   | 113        |
|                  | 5.4.8  | 3-Hydroxypropionic Acid.....  | 114        |
|                  | 5.4.9  | Sorbitol .....  | 115        |
|                  | 5.4.10 | Xylitol .....   | 116        |
|                  | 5.4.11 | Itaconic Acid .....   | 118        |
| 5.5              |        | Conclusion and Perspective .....  | 119        |
| <b>Chapter 6</b> |        | <b>Sustainable Electrode Materials/Composites for Batteries<br/>and Fuel Cells for Achieving Supercapacitance and<br/>Environmentally Benign Mobility .....</b> | <b>134</b> |
|                  |        | <i>Naveen Kumar, Surinder Singh, Neena Mehta, Alex Ibhaddon,<br/>and S.K. Mehta</i>   |            |
| 6.1              |        | Introduction .....  | 135        |
|                  | 6.1.1  | Advances in Electrode Materials of Batteries<br>and Fuel Cells.....   | 136        |
|                  | 6.1.2  | Electrical Double Layer Capacitors .....  | 137        |
|                  | 6.1.3  | Pseudocapacitors .....  | 137        |

|                  |  |            |
|------------------|--|------------|
| 6.2              | Electrode Material.....  | 138        |
| 6.3              | Carbon-Based Material.....   | 139        |
| 6.3.1            | Biomass-Derived Materials.....   | 139        |
| 6.3.2            | Graphene-Based Electrode Material.....   | 143        |
| 6.4              | Transition Metal-Derived Electrode Materials.....  | 147        |
| 6.4.1            | Synthetic Strategies.....  | 147        |
| 6.4.2            | Transition Metal Oxide/Hydroxide-Based<br>Electrode Materials.....   | 148        |
| 6.5              | Conclusion.....  | 151        |
| <b>Chapter 7</b> | <b>Carbon-Based Heterostructures: A Circular Economy<br/>Energy Application towards Electrochemical Sensors.....</b> | <b>159</b> |
|                  | <i>Ragu Sasikumar and Byungki Kim</i>  |            |
| 7.1              | Introduction.....  | 160        |
| 7.2              | Electrochemical Techniques.....  | 162        |
| 7.3              | Carbon-Based Heterostructures Properties and<br>Application to Electrochemical Sensors.....                          | 163        |
| 7.3.1            | Graphene (GR).....   | 164        |
| 7.3.2            | Carbon Quantum Dots (CQDs).....  | 166        |
| 7.3.3            | Carbon Nanotubes (CNTs).....   | 168        |
| 7.3.4            | Graphitic Carbon Nitride (g-C <sub>3</sub> N <sub>4</sub> ).....   | 171        |
| 7.4              | Challenges and Future Perspectives.....  | 172        |
| 7.5              | Conclusions.....   | 173        |
| 7.6              | Acknowledgments.....   | 173        |
| <b>Chapter 8</b> | <b>Technologies for Conversion of Biomass to Valuable<br/>Chemicals and Fuels.....</b>                               | <b>177</b> |
|                  | <i>Uplabdhi Tyagi and Neeru Anand</i>  |            |
| 8.1              | Introduction.....  | 177        |
| 8.1.1            | Potential of Bio-Based Products in Terms of<br>Circular Economy.....   | 178        |
| 8.1.2            | Transition in Circular Economy Based on Biomass-<br>Derived Energy and Products Sustainability.....                  | 181        |
| 8.2              | Process Advancement and Technologies for Biomass<br>Pretreatment.....  | 183        |
| 8.2.1            | Physio-Chemical Conversion.....  | 183        |
| 8.2.2            | Thermo-Chemical Conversion.....  | 187        |
| 8.3              | Advancements in Biowaste Refining Process and<br>Techniques for the Development of Bioenergy<br>and Bioproducts..... | 190        |
| 8.3.1            | Anaerobic Digestion and Co-Digestion for the<br>Generation of Bioenergy.....   | 191        |
| 8.3.2            | Composting or Co-Composting Techniques.....  | 193        |

|                   |  |            |
|-------------------|--|------------|
| 8.4               | Implication and Challenges .....   | 193        |
| 8.5               | Future Implications.....   | 196        |
| 8.6               | Conclusion .....   | 197        |
| <b>Chapter 9</b>  | <b>Microgrid Structure for Tapping Renewable Energy .....</b>                            | <b>202</b> |
|                   | <i>Manjeet Singh, Kulbir Singh, Surinder Singh,<br/>Arashdeep Singh, and Harjot Gill</i> |            |
| 9.1               | Introduction .....   | 202        |
| 9.2               | Microgrid Structure Selection .....  | 203        |
| 9.2.1             | Microgrid.....   | 205        |
| 9.3               | Components of Microgrid Structure .....  | 205        |
| 9.3.1             | Control Methods of Microgrid Structures.....   | 207        |
| 9.3.2             | Control Modes for Microgrid Operation in<br>Grid-Connected Mode .....                    | 207        |
| 9.3.3             | Control Modes for Microgrid Operation in<br>Islanded Mode .....                          | 207        |
| 9.4               | Concerns of Microgrid Structure .....  | 208        |
| 9.5               | Standards for Microgrid Structures.....  | 209        |
| 9.6               | Parameters in Microgrid Design .....   | 209        |
| 9.7               | Guidelines for Distribution of Electricity in India .....                                | 210        |
| 9.8               | Cost of Renewable Energy.....  | 211        |

| <b>Chapter 12</b> | <b>MOF-Based Nanocomposites for Energy Storage and Supercapacitor Applications.....</b> | <b>289</b> |
|                   | <i>Rekha Gaba and Ramesh Kataria</i>  |            |
| 12.1              | Introduction .....  | 289        |
| 12.2              | Classification of Supercapacitors.....  | 290        |
| 12.2.1            | Electric Double-Layer Capacitors .....  | 290        |
| 12.2.2            | Pseudocapacitor .....   | 291        |
| 12.2.3            | Hybrid Supercapacitors .....  | 291        |
| 12.3              | Structure of MOFs.....  | 292        |
| 12.3.1            | Method of Synthesis of MOF .....  | 293        |
| 12.3.2            | MOF-Derived Metal Oxide/Carbon Nanocomposites for Supercapacitors .....                 | 295        |
| 12.3.3            | MXene/MOF Composites .....  | 296        |
| 12.3.4            | Redox Polymer Nanocomposites.....   | 298        |
| 12.4              | MOF for the Circular Economy (Trash to Treasure).....                                   | 299        |
| 12.4.1            | Purification and Activation of MOF in the Interpretation of Circular Economy .....      | 300        |
| 12.5              | Conclusions.....  | 301        |
| <b>Chapter 13</b> | <b>A Circular Economy Approach to Solar Energy.....</b>                                 | <b>308</b> |
|                   | <i>Ashok Prabhakar</i>  |            |
| 13.1              | Introduction .....  | 308        |
| 13.1.1            | Solar Energy Demand, Production, and Waste Generation .....                             | 308        |
| 13.1.2            | Solar Waste Handling.....   | 309        |
| 13.2              | Circular Economy Strategy .....   | 310        |
| 13.2.1            | Various Perspectives of the Circular Economy .....                                      | 310        |
| 13.3              | Pathways to Circular Economy via PV Making/Recycling ....                               | 312        |
| 13.3.1            | Material Strength and Recycling.....  | 312        |
| 13.3.2            | Reutilization of Materials from Other Industries via Recycling .....                    | 312        |
| 13.3.3            | Use of Electricity from Renewable Energy Sources ....                                   | 313        |
| 13.3.4            | Design of PV Module for Circular Economy .....  | 313        |
| 13.3.5            | Sustainable Role of Purchase for Circular Economy.....                                  | 314        |
| 13.4              | Key Aspects at End-of-Life Uses .....   | 315        |
| 13.4.1            | Addressing EOL Issues for Circular Economy .....  | 317        |
| 13.4.2            | Environmental and Social Benefit.....   | 319        |
| 13.5              | Indian Perspective of Circular Economy in Solar Energy ....                             | 319        |
| 13.5.1            | Installed PV Capacity in India.....   | 319        |
| 13.5.2            | Installed PV Capacity Projection for Targeted Expansion of RE.....                      | 320        |
| 13.6              | Conclusion .....  | 321        |

|                   |   |     |
|-------------------|---|-----|
| <b>Chapter 14</b> | Recycling within the Chemical Industry: The Circular Economy Approach—Industrial Perspectives .....         | 329 |
|                   | <i>Brijnandan Singh Dehiya</i>  |     |
| 14.1              | Introduction .....  | 329 |
| 14.1.1            | Key Principles of Circular Economy in Chemical Industries.....  | 333 |
| 14.2              | Circular Economy in Chemical Production .....   | 335 |
| 14.3              | Circular Economy in Chemical Product Design .....   | 337 |
| 14.4              | Circular Economy in Chemical Waste Management .....   | 338 |
| 14.5              | Challenges and Opportunities .....  | 339 |
| 14.6              | Conclusions.....  | 341 |
| <b>Chapter 15</b> | Future Perspectives of Global Circular Economy Transition and Comprehensive Cost Analysis .....             | 347 |
|                   | <i>Surinder Singh, Himanshi Bansal, Surendra Kumar Sharma, Suresh Sundaramurthy and Sushil Kumar Kansal</i> |     |
| 15.1              | Circular Economy Introduction.....  | 347 |
| 15.1.1            | Principles of Circular Economy .....  | 349 |
| 15.2              | Drivers of Circular Economy Transition .....  | 350 |
| 15.3              | Long-Term Value Maximization Using Circular Economy.....  | 355 |
| 15.4              | Comprehensive Cost Analysis in Circular Economy .....   | 356 |
| 15.5              | Cost-Benefit Analysis of Circular Economy Transition .....  | 358 |
| 15.6              | Future Trends and Prospects .....   | 358 |
| 15.6.1            | ColdHubs: Solar-Powered, Cooling-as-a-Service Solution.....   | 358 |
| 15.6.2            | Bangladesh's Award-Winning Hospital .....   | 359 |
| 15.6.3            | Brazilian Cosmetics Brand Natura Flips the Script on Deforestation.....                                     | 359 |

| <b>Index</b>      | .....   | 365 |

Suresh Sundaramurthy (NIT Rourkela, India) Prof. Suresh Sundaramurthy is a Faculty and former Head of Department of Chemical Engineering, Maulana Azad National Institute of Technology (MA-NIT) Bhopal, India. He received a Ph.D. in chemical engineering from Indian Institute of Technology Kharagpur, India. Prof. Suresh was the recipient of a Post-Doctoral Fellow award by IUSSTEC, Govt. of India, at the time, he was associated at the City University of New York.
