

## CONTENTS

- I. THE FUNDAMENTAL NOTIONS 13
- The beginnings—Dr Plot's paper of 1698—Fundamental particles (atoms and electrons and others)—Wilson's cloud-chamber apparatus—Theory of electrification—Electrostatics—Gold-leaf electroscope—Charges on asymmetrical bodies—Actions of points—Charging by influence or induction—Modern electrostatic generator—Electric current—Electromotive force and current—Units—Instruments.
- II. FURTHER ESSENTIAL FACTS 29
- Conductors and insulators—Inorganic compounds—Ionic bond—Organic compounds—Metals—Conduction in liquids—Dissociation in solution—Conduction in gases—Current and heat—Standard of safety—Electric circuit (meaning)—Circuit diagrams—Resistance—Chief electrical effects (heating, chemical, magnetic).
- III. SOURCES OF E.M.F. 48
- Four methods of making electricity—Primary cells—Simple voltaic cell—Polarization—Modern cells—Secondary cells—Lead-acid type—Charge and recharge—E.m.f.—Hydrometers for testing cells—Alkaline accumulators—Series and parallel—Batteries—Thermo-electric effect—Generators—Internal resistance—Regulation—A.C. and D.C.—Measuring instruments.

- IV. THE FUNDAMENTAL LAWS 69  
 Georg Simon Ohm—His life and work—Ohm's Law—Modern expression of it—Derivation of practical units of measurement—Resistivity—Representative examples—Resistors, fixed and variable—Non-ohmic resistors—Potential difference.
- V. THE LAWS APPLIED 93  
 Internal resistance — Representative figures quoted—External e.m.f.—Load (what it means) —Regulation—Limitations of sources—Resistances in series — Resistances in parallel — Equivalent resistance—Current in parallel circuits—Ammeters in circuits—Extending the range of an ammeter—Voltmeter resistance—Extending the range of a voltmeter—Measurement of resistance—Multi-range instruments —Short circuit—Potential divider—Dropping voltage—Electrostatic voltmeter.
- VI. MAGNETICS—I 123  
 Magnetic phenomena—William Gilbert and others—Magnetic fields—Units of measurement — Magnetic induction—Permeability — Permanent magnets—Remanence and coercivity.
- VII. MAGNETICS—II 138  
 The earth's magnetism—Declination—Changes in the earth's magnetism, periodic and non-periodic—Dip—The magnetic mine and degaussing—Theories of magnetism—Ferromagnetics, paramagnetics, diamagnetics.
- VIII. ELECTROMAGNETICS—I: MAGNETISM FROM ELECTRICITY 147  
 Oersted—Magnetic effect in straight wire—Corkscrew rule—Early galvanometer—Ampère and others—Sturgeon and the electromagnet—Polarity rule—Making permanent magnets—The motor effect—Ammeters and voltmeters.

## CONTENTS

- IX. ELECTROMAGNETICS—II: ELECTRICITY FROM MAGNETISM** 166  
Michael Faraday—Electromagnetic induction—Faraday's solution of the problem by experiment—Size of e.m.f. induced—The transformer—The induction coil.
- X. GENERATING ELECTRICITY** 181  
Conductor moving in a magnetic field—Fleming's right-hand rule—Loop in magnetic field—Rotation—Form of e.m.f. generated—The commutator—Practical generators—Four-pole machines—Siemens armature—Gramme ring-armature—D.C. and A.C. generators (alternators)—Stator and rotor—Eddy currents—Power and its measurement—Electric motors.
- XI. THE MAINS** 201  
Type of e.m.f.—Change of load—Voltage drop—Types of supply—Three-wire D.C. system—Advantages of A.C. supply—Phase—The National Grid—Central Electricity Board—Overhead transmission—Underground transmission—Rates—Earthing—The company's responsibility.
- XII. INSTALLATION IN THE HOME** 219  
The Board of Trade unit—Rules and regulations—I.E.E.—Earth-free situations—Flexible cords—Wiring systems—Colouring the conductors—Arrangement of circuits—Points—Ceiling-rose—Socket outlets—Earthing—Switches—Tumbler switches—Pear switch—Fuses—Fuse-box—Procedure in repairing a fuse—Fittings—Lampholders—Adaptors—Rational wiring.
- XIII. ALTERNATING CURRENT** 256  
Inductance—Inductive reactance—Capacitance—Capacitive reactance—Condenser—Modification of word 'circuit'—Alternating current—R.M.S. value—Ohm's Law and A.C.—Impedance—Rectification—Thermo-junction.

## ELECTRICITY

- ✓ XIV. ELECTRIC LIGHTING 266  
Three ways of producing light by electricity—  
The filament-lamp—Heating effect—Swan and  
Edison—First electric lamp—Carbon filament  
— Tungsten filament — Gas-filled lamp —  
Methods of connexion—Electrical power and  
candle-power — Arc lamps — Gas-discharge  
lamps—Fluorescent lighting.
- XV. SOME NATURAL PHENOMENA 283  
Lightning and thunder—Creation of electric  
charge in clouds—Human body and electricity  
— Effect of current — Contact resistance —  
Ohm's Law applied—Dangers of moisture.
- ✓ XVI. ELECTRIC HEATING 288  
Heat and energy—J. P. Joule—Mechanical  
equivalent of heat—The conductor—The elec-  
tric fire—Electric iron—Water heaters—Elec-  
tric cookers—Other devices—Electric-arc fur-  
nace — Infra-red heating — High-frequency  
heating—Electronics.
