

# Contents

PREFACE . . . . .	v
ILLUSTRATIONS . . . . .	xiii
1. ENERGY AND THE STRUCTURE OF MATTER . . . . .	3
Conservation of Matter and Energy. Relativity. Atomic Structure. Atomic Arrangement.	
2. STRUCTURE OF FLUIDS AND THE PHASE RULE . . . . .	12
Gram Molecules. Equation of State of a Gas. Critical Temperature. Gibb's Phase Rule. Calculation of Criti- cal Temperature. Supercooled Liquids.	
3. STRUCTURE OF THE SOLID STATE . . . . .	19
Crystals versus Molecules. Conductivity. Electrons. Interrelation of Physical Properties. Structure of Com- pounds. Structure of Supercooled Liquids.	
4. SPECIFIC HEAT . . . . .	26
Specific Heat. Debye Function. Kopp's Rule. Spe- cific Heats at Constant Volume and at Constant Pressure.	
5. CHANGES OF STATE AND LATENT HEAT . . . . .	32
Latent Heat of Fusion. Trouton's Rule. Vapor Pres- sure. Clausius-Clapeyron's Equation. Specific Heat of Gases. Hess's Rule.	

6. FREE ENERGY AND EQUILIBRIUM IN SINGLE-COMPONENT SYSTEMS . . . . . 38  
Free Energy and Entropy. Free Energy versus Temperature and Pressure.
7. FREE ENERGY AND BINARY EQUILIBRIUM . . . . . 45  
Partial Molal Free Energy. Van't Hoff's Isochore. Van Laar's or Schroeder's Equation. Valence Electrons and Solid Solubility.
8. SUPERCOOLING . . . . . 55  
Surface Free Energy.
9. ELECTRIC FURNACES AND HEAT LOSSES IN STEADY STATE . . . . . 60  
Solar Origin of Energy. Electrical Energy. Steady State of Heat Transfer through Furnace Walls.
10. CARBON COMBUSTION . . . . . 69  
Flame Temperature. Mass Law. Computation of Flame Temperature.
11. CARBON AND HYDROGEN COMBUSTION . . . . . 80  
Producer Gas. Water Gas. Carbon-Hydrogen-Oxygen Equilibriums. Calculation of Flame Temperature.
12. RELATION OF FREE ENERGY AND THE EQUILIBRIUM CONSTANT—ACTIVITY . . . . . 92  
Composition of Minimum Free Energy. Free Energy and Equilibrium Constant of a Reaction. Pressure and Equilibrium Constant. Equilibrium Constant in Solutions. Activity.
13. HEAT TRANSFER IN UNSTEADY STATE . . . . . 103  
Diffusivity. Heating of a Slab. Heating of a Sphere. Schmidt Solution.
14. HEATING OF FURNACE CHARGES . . . . . 111  
Heat Transfer to Charge. Heat Transfer by Radiation. Preferred Direction of Flow in Passages.

## CONTENTS

xi

15. MEASUREMENT OF HIGH TEMPERATURES . . . . . Thermocouples. Radiation Laws.	116
16. VAPORIZATION AND OXIDATION OF ALLOYS . . . . . Vaporization in Melting. Oxygen Pressure.	119
17. DIRECTION OF REACTIONS . . . . . Direction of Reactions. Free Energy of a Reaction. Reversible Processes. Equilibrium Constant. Nernst Partition Principle. Carbon-Oxygen Equilibrium in Steelmaking. Deoxidation by Manganese. Basic and Acid Slags. Manganese Sulphide. Solubility of Gases.	124
18. RATE OF REACTIONS. . . . . Thermal Coefficient of Reaction Velocity. Reaction Velocities. Limitations on Reaction Velocities.	133
19. ORIGIN AND CONTROL OF CARBON IN FERROUS ALLOYS . . . . . Source and Concentration of Carbon. Carbon-Oxygen- Gamma Iron. Solid Cementite-Solid Graphite-Liquid Iron. Carbon Content of Cupola Metal. Chemistry of the Reverberatory Furnace. Decarburization in the Converter. Reduction of $\text{SiO}_2$ by C.	136
20. MICROSTRUCTURE OF IRON-CARBON ALLOYS . . . . . The Iron-Carbon Diagram. Low-Carbon Steels. The Nonmetallic Phases. Purpose of Normalizing. Freezing of Cast Irons. Effect of Sonims on Graphite Formation. Supercooling and Graphite Form. Graphitization in Solid White Cast Iron. Reaction Rates during Graphiti- zation of White Cast Iron. Diffusion.	150
21. EFFECT OF ALLOYING ELEMENTS ON MICROSTRUC- TURE OF IRON-CARBON ALLOYS . . . . . Equilibriums in Three-Phased Systems. Representation of Three-Phased Equilibriums. Iron-Carbon-Silicon. Conjugate Compositions. Silicon and Freezing of Gray Iron. Multicomponent Systems. Effect of Alloys on Graphitization in the Solid State. Hardenability of Alloy Steels. Grossmann's Relation of Composition and Hardenability.	171

22. MATERIALS OF MOLDS . . . . .	188
Metal Molds. Sand Molds. Permeability and Grain Size. Clay Bond. Organic Binders.	
23. FLUID MECHANICS OF CASTING . . . . .	201
Viscosity of Liquids. Surface Tension. Hydraulics. Surface Tension and Penetration. Surface Tension and Wetting.	
24. GATING AND FEEDING . . . . .	214
Gas Pressure in Molds. Removal of Slag. Proportions of Runners. Freezing Time. Risers. Shrinkage Voids. Chills. Residual Stresses. Centrifugal Casting.	
25. DISTRIBUTION OF FLAME IN FURNACES . . . . .	237
Flow of Hot Gases. Heat Exchangers.	
26. STATISTICAL CONTROL OF PROCESSES . . . . .	246
Normal Distribution of a Property. Standard Deviation, a Measure of Scatter. Probability of Errors Exceeding a Given Magnitude. Significant Differences. Standard Error of a Sum or Difference. Correlation. Regression Coefficients. Quality Control Charts.	
SUPPLEMENTARY READING . . . . .	263
NAME INDEX . . . . .	271
SUBJECT INDEX . . . . .	273
