

# Brief Contents

Preface v

Acknowledgments ix

List of Contributors xix

- 1 What Is Inorganic Chemistry, and Why Study It? 1
- 2 A Brief Review of Physical Chemistry 13
- 3 Basics of Bonding: The 2-Center 2-Electron (2c2e) Bond 46
- 4 The Shapes of Main-Group Molecules: The VSEPR Model 89
- 5 Symmetry and Group Theory 100
- 6 Group Theory and Molecular Orbital Theory 152
- 7 Hybridization-Based Theories of Bonding: Applications Within the Main Group 193
- 8 Main-Group Bonding 212
- 9 Applying Bonding Principles to Main-Group Reactivity and Properties 245
- 10 Introduction to Transition-Metal Chemistry 293
- 11 Basics of Transition-Metal Bonding 1: Simple Ligands Including Olefins, Diatomics, Phosphines, and Hydrides 329
- 12 Basics of Transition-Metal Bonding 2: Conjugated  $\pi$ -Systems, Metal-Ligand Multiple Bonds, and Other Ligand Types 368
- 13 Thermodynamic Considerations in Reactivity: Acid-Base Theory and Redox Reactions 413
- 14 Understanding Transition-Metal Complexes Using Hybridization-Based Theory 448
- 15 The 1-Electron Picture of Transition-Metal Electronic Structure 467
- 16 Optical Spectroscopy and Excited-State Electronic Structure 529
- 17 Kinetics and Mechanisms of Ligand Substitutions 577
- 18 Reactivity in Organometallic Chemistry 621
- 19 Solid-State Chemistry 665
- 20 Bioinorganic Chemistry 703
- 21 *f*-Element Chemistry 761

Appendix A Polar Covalence 793

Appendix B Some Representative Bond Distances and Bond Energies 798

Appendix C Tabulated Values for Determination of Bond Order:  
 $r_0$  and  $b$  800

Appendix D	Character Tables	802
Appendix E	Review of Matrix Manipulations	817
Appendix F	Expansion of the AOM to Include $S^4$ Terms	820
Appendix G	Matrices Associated with Strong Field Parameters	822
Appendix H	Changes in Atomic Radius with Charge and Coordination Number	834
Appendix I	Imaginary Numbers and Complex Conjugates	835
Appendix J	Standard Reduction Potentials	839
Appendix K	Valence Orbital Energies	842
Appendix L	Shapes of the $f$ -Orbitals	844
Appendix M	Linear Combination of Atomic Orbitals (LCAO) Molecular Orbital Method Review	846
Appendix N	Pascal's Constants and the Diamagnetic Susceptibility	849
Index		853
