<b>Introduction to Essentials of Light Microscopy</b>	<b>1</b>
<b>1. The light microscope</b>	<b>4</b>
1.1 Introduction	4
1.2 Why we need microscopes	4
1.3 The size of the microscope specimen	6
1.4 Types of light microscope	7
1.5 The compound microscope	8
1.6 Function of the condenser, objective and eyepieces	8
1.7 The parts of the compound light microscope	9
1.8 How the stereo-microscope differs from the compound microscope	16
1.9 Ergonomics	18
<b>2. How to set up and adjust a light microscope</b>	<b>20</b>
2.1 Introduction	20
2.2 The function of the lamp collector lens	22
2.3 Conjugate planes	22
2.4 The purpose of Köhler illumination	26
2.5 How to set up and adjust a transmitted-light microscope with a built-in light source for Köhler illumination	28
2.6 Depth of field and depth of focus	34
2.7 Adjusting the stereo-microscope	36
2.8 The microscope objective	36
2.9 Useful and empty magnification	38
2.10 Optical aberrations	38
2.11 The three classes of objective correction	42
2.12 Finite and infinity correction in objectives	45
2.13 Information written on the objective	47
2.14 How to use an oil-immersion objective	48
2.15 Working distance	50
2.16 Care of objectives	51
2.17 The eyepiece	52
2.18 The microscope condenser	56
2.19 Sources of illumination	59
<b>3. Contrast in microscopy</b>	<b>62</b>
3.1 Introduction	62
3.2 Light and the specimen	62
3.3 Absorption, transmission and reflection of light by the specimen	63
3.4 Scattering and diffraction	66

## vi Contents

3.5	Refraction and polarised light	67
3.6	Phase change	68
3.7	Fluorescence	69
3.8	Brightfield and oblique illumination	69
3.9	Darkfield contrast	70
3.10	Placing modulators and filters in conjugate planes in the illumination path	73
3.11	Phase-contrast microscopy	73
3.12	Differential interference contrast (DIC)	79
<b>4.</b>	<b>Reflected-light microscopy</b>	<b>84</b>
4.1	Introduction	84
4.2	Coverslip requirement and stray light	85
4.3	Optical pathways in reflected-light microscopy	86
4.4	Contrast mechanisms in reflected-light microscopy	88
<b>5.</b>	<b>Polarised-light microscopy</b>	<b>98</b>
5.1	Introduction	98
5.2	Polarised light, double refraction and optical path difference (OPD)	98
5.3	Formation of polarised light	103
5.4	Elliptical and circular polarised light	105
5.5	The polarised-light microscope	105
5.6	The behaviour of anisotropic material seen with a single polar	109
5.7	Behaviour of anisotropic materials between crossed polars	110
5.8	Newton's interference colour scale and the Michel-Lévy chart	110
5.9	Compensators	115
<b>6.</b>	<b>Fluorescence microscopy</b>	<b>119</b>
6.1	Introduction	119
6.2	How fluorescence occurs	121
6.3	Fluorophores	124
6.4	Fluorescence microscope design	126
6.5	Fluorescence filtersets	128
6.6	The drawbacks of fluorescence	130
6.7	Overlaying a brightfield and fluorescence image	134
6.8	Optical sectioning	134
<b>7.</b>	<b>Advanced fluorescence microscopy for life-sciences</b>	<b>136</b>
7.1	Introduction	136
7.2	Optical sectioning	136
7.3	The confocal microscope	138
7.4	Pixel reassignment	141
7.5	Multi-photon microscopy	142
7.6	Lightsheet microscopy	143
7.7	Deconvolution	145
7.8	Which microscope to choose?	148
7.9	Experimental planning and open-source freeware	155

7.10 Niche fluorescence microscopy methods	156
7.11 Live-cell imaging	157
7.12 Colocalisation	159
7.13 Super-resolution microscopy	163
<b>8. Recording digital images</b>	<b>176</b>
8.1 Introduction	176
8.2 How digital images are formed and encoded	177
8.3 How digital detectors acquire images	179
8.4 Bit depth and dynamic range	181
8.5 Encoding colour in digital images	182
8.6 The Nyquist sampling criterion	183
8.7 Matching the microscope magnification to the CCD/CMOS pixel size	186
8.8 Digital image resolution	188
8.9 Digital camera noise	189
8.10 Binning	190
8.11 Flat-field correction	190
8.12 Altering images post-acquisition	191
8.13 Scale bars	193
8.14 Data handling and saving	195
8.15 Smartphone adaptors for microscopes	195
8.16 Digital imaging ethics	196
<b>9. Optical principles</b>	<b>198</b>
9.1 Introduction	198
9.2 The nature of light	201
9.3 Reflection, refraction and dispersion of light	202
9.4 Lenses	205
9.5 The phenomena of interference and diffraction	209
9.6 Numerical aperture	217
9.7 Resolution in the microscope — the Abbe criterion	218
9.8 Airy patterns	221
9.9 Resolution in the light microscope — the Rayleigh criterion	223
9.10 Basics of Fourier transforms	225
<i>Appendix 1: Setting up a light microscope</i>	227
<i>Appendix 2: Cleaning and maintenance of the light microscope</i>	228
<i>Appendix 3: Historical background</i>	231
<i>Appendix 4: Other imaging techniques</i>	233
