<i>Preface</i>	<i>vii</i>
<i>Notation</i>	<i>xviii</i>
CHAPTER 1 Introduction	1
1.1 What Is a Signal?	1
1.2 Classification of Signals	2
1.3 Basic Operations on Signals	11
1.4 Elementary Signals	19
1.5 What Is a System?	38
1.6 Overview of Specific Systems	39
1.7 Systems Viewed as Interconnections of Operations	52
1.8 Properties of Systems	54
1.9 Noise	68
1.10 Theme Examples	71
1.11 Exploring Concepts with MATLAB	80
1.12 Summary	86
Further Reading	87
Additional Problems	88
Advanced Problems	94
Computer Experiments	97
CHAPTER 2 Time-Domain Representations of Linear Time-Invariant Systems	99
2.1 Introduction	99
2.2 The Convolution Sum	100
2.3 Convolution Sum Evaluation Procedure	104
2.4 The Convolution Integral	118
2.5 Convolution Integral Evaluation Procedure	120
2.6 Interconnections of LTI Systems	132
2.7 Relations Between LTI System Properties and the Impulse Response	138
2.8 Step Response	144
2.9 Differential and Difference Equation Representations of LTI Systems	146
2.10 Solving Differential and Difference Equations	153
2.11 Characteristics of Systems Described by Differential and Difference Equations	163
2.12 Block Diagram Representations	169

2.13	State-Variable Descriptions of LTI Systems	174
2.14	Exploring Concepts with MATLAB	184
2.15	Summary	190
	Further Reading	191
	Additional Problems	192
	Advanced Problems	201
	Computer Experiments	203

CHAPTER 3 Fourier Representations of Signals and Linear Time-Invariant Systems 205

3.1	Introduction	205
3.2	Complex Sinusoids and Frequency Response of LTI Systems	206
3.3	Fourier Representations for Four Classes of Signals	209
3.4	Discrete-Time Periodic Signals: The Discrete-Time Fourier Series	212
3.5	Continuous-Time Periodic Signals: The Fourier Series	225
3.6	Discrete-Time Nonperiodic Signals: The Discrete-Time Fourier Transform	241
3.7	Continuous-Time Nonperiodic Signals: The Fourier Transform	252
3.8	Properties of Fourier Representations	265
3.9	Finding Inverse Fourier Transforms by Using Partial-Fraction Expansions	311
3.10	Parseval Relationships	317
3.11	Time–Bandwidth Product	319
3.12	Duality	321
3.13	Exploring Concepts with MATLAB	327
3.14	Summary	335
	Further Reading	336
	Additional Problems	337
	Advanced Problems	348
	Computer Experiments	353

CHAPTER 4 Applications of Fourier Representations to Mixed Signal Classes 357

4.1	Introduction	357
4.2	Fourier Transform Representations of Periodic Signals	358
4.3	Convolution and Multiplication with Mixtures of Periodic and Nonperiodic Signals	364
4.4	Fourier Transform Representation of Discrete-Time Signals	375
4.5	Sampling	379
4.6	Reconstruction of Continuous-Time Signals from Samples	388
4.7	Discrete-Time Processing of Continuous-Time Signals	400
4.8	Fourier Series Representations of Finite-Duration Nonperiodic Signals	407
4.9	The Discrete-Time Fourier Series Approximation to the Fourier Transform	414
4.10	Efficient Algorithms for Evaluating the DTFS	422
4.11	Exploring Concepts with MATLAB	426
4.12	Summary	429
	Further Reading	430
	Additional Problems	431
	Advanced Problems	436
	Computer Experiments	440

CHAPTER 5 The Laplace Transform

5.1	Introduction	443
5.2	The Laplace Transform	443
5.3	The Unilateral Laplace Transform	451
5.4	Properties of the Unilateral Laplace Transform	452
5.5	Inversion of the Unilateral Laplace Transform	457
5.6	Solving Differential Equations with Initial Conditions	462
5.7	Laplace Transform Methods in Circuit Analysis	467
5.8	Properties of the Bilateral Laplace Transform	470
5.9	Properties of the Region of Convergence	473
5.10	Inversion of the Bilateral Laplace Transform	477
5.11	The Transfer Function	481
5.12	Causality and Stability	484
5.13	Determining the Frequency Response from Poles and Zeros	489
5.14	Exploring Concepts with MATLAB	502
5.15	Summary	505
	Further Reading	507
	Additional Problems	507
	Advanced Problems	511
	Computer Experiments	513

CHAPTER 6 The z -Transform

6.1	Introduction	515
6.2	The z -Transform	515
6.3	Properties of the Region of Convergence	524
6.4	Properties of the z -Transform	529
6.5	Inversion of the z -Transform	535
6.6	The Transfer Function	543
6.7	Causality and Stability	547
6.8	Determining the Frequency Response from Poles and Zeros	553
6.9	Computational Structures for Implementing Discrete-Time LTI Systems	559
6.10	The Unilateral z -Transform	562
6.11	Exploring Concepts with MATLAB	568
6.12	Summary	571
	Further Reading	572
	Additional Problems	572
	Advanced Problems	576
	Computer Experiments	579

CHAPTER 7 Application to Communication Systems

7.1	Introduction	581
7.2	Types of Modulation	581
7.3	Benefits of Modulation	585
7.4	Full Amplitude Modulation	587

7.5	Double Sideband-Suppressed Carrier Modulation	596
7.6	Quadrature-Carrier Multiplexing	601
7.7	Other Variants of Amplitude Modulation	602
7.8	Pulse-Amplitude Modulation	607
7.9	Multiplexing	611
7.10	Phase and Group Delays	616
7.11	Exploring Concepts with MATLAB	620
7.12	Summary	630
	Further Reading	631
	Additional Problems	632
	Advanced Problems	635
	Computer Experiments	637
CHAPTER 8 Application to Filters and Equalizers		639
8.1	Introduction	639
8.2	Conditions for Distortionless Transmission	639
8.3	Ideal Low-Pass Filters	642
8.4	Design of Filters	648
8.5	Approximating Functions	649
8.6	Frequency Transformations	656
8.7	Passive Filters	658
8.8	Digital Filters	659
8.9	FIR Digital Filters	661
8.10	IIR Digital Filters	670
8.11	Linear Distortion	675
8.12	Equalization	676
8.13	Exploring Concepts with MATLAB	680
8.14	Summary	685
	Further Reading	685
	Additional Problems	686
	Advanced Problems	688
	Computer Experiments	689
CHAPTER 9 Application to Linear Feedback Systems		691
9.1	Introduction	691
9.2	What Is Feedback?	691
9.3	Basic Feedback Concepts	693
9.4	Sensitivity Analysis	696
9.5	Effect of Feedback on Disturbance or Noise	698
9.6	Distortion Analysis	699
9.7	Summarizing Remarks on Feedback	701
9.8	Operational Amplifiers	701
9.9	Control Systems	707
9.10	Transient Response of Low-Order Systems	710
9.11	The Stability Problem	713

9.12	Routh–Hurwitz Criterion	717
9.13	Root Locus Method	721
9.14	Nyquist Stability Criterion	730
9.15	Bode Diagram	736
9.16	Sampled-Data Systems	741
9.17	Exploring Concepts with MATLAB	751
9.18	Summary	755
	Further Reading	756
	Additional Problems	757
	Advanced Problems	760
	Computer Experiments	765
CHAPTER 10 Epilogue		769
10.1	Introduction	769
10.2	Speech Signals: An Example of Nonstationarity	770
10.3	Time–Frequency Analysis	771
10.4	Nonlinear Systems	782
10.5	Adaptive Filters	789
10.6	Concluding Remarks	792
	Further Reading	792
APPENDIX A Selected Mathematical Identities		795
A.1	Trigonometry	795
A.2	Complex Numbers	796
A.3	Geometric Series	797
A.4	Definite Integrals	797
A.5	Matrices	798
APPENDIX B Partial-Fraction Expansions		800
B.1	Partial-Fraction Expansions of Continuous-Time Representations	800
B.2	Partial-Fraction Expansions of Discrete-Time Representation	803
APPENDIX C Tables of Fourier Representations and Properties		806
C.1	Basic Discrete-Time Fourier Series Pairs	806
C.2	Basic Fourier Series Pairs	807
C.3	Basic Discrete-Time Fourier Transform Pairs	807
C.4	Basic Fourier Transform Pairs	808
C.5	Fourier Transform Pairs for Periodic Signals	808
C.6	Discrete-Time Fourier Transform Pairs for Periodic Signals	809
C.7	Properties of Fourier Representations	810
C.8	Relating the Four Fourier Representations	812
C.9	Sampling and Aliasing Relationships	812

APPENDIX D	Tables of Laplace Transforms and Properties	814
D.1	Basic Laplace Transforms	814
D.2	Laplace Transform Properties	815
APPENDIX E	Tables of z-Transforms and Properties	817
E.1	Basic z -Transforms	817
E.2	z -Transform Properties	818
APPENDIX F	Introduction to MATLAB	819
F.1	Basic Arithmetic Rules	819
F.2	Variables and Variable Names	820
F.3	Vectors and Matrices	820
F.4	Plotting in MATLAB	823
F.5	M-files	824
F.6	Additional Help	825
INDEX		827
