

# Contents

1. Historical Survey	1
1.1 Origins of formal logic	1
1.2 Origins of analysis	2
1.3 Set theory	3
1.4 The axiom of choice	6
1.5 Theorems about logic	7
1.6 The unprovability of consistency	8
1.7 Computability	9
1.8 Turing machines	10
1.9 Incompleteness in set theory	11
1.10 Computational complexity	11
1.11 Suggestions for further reading	13
2. The Completeness of First-order Logic	14
2.1 Formal languages	14
2.2 The formal language $L_{\text{Order}}$	15
2.3 Interpretations	15
2.4 Completeness problem	18
2.5 The Gödel–Henkin Completeness Theorem	22
2.6 Suggestions for further reading	26
3. Model Theory	27
3.1 Equality	27
3.2 Limitations of first-order logic	29
3.3 The Compactness and Löwenheim-Skolem Theorems	33
3.4 Categoricity in power	40
3.5 Applications of Model Theory	44
3.6 Suggestions for further reading	46
4. Turing Machines	48
4.1 From Post to Turing	48
4.2 Turing machines	50
4.3 Computable (partial) functions	54
4.4 Standard description of Turing machines	55
4.5 An unsolvable problem	57
4.6 Universal Turing machines	58
4.7 Turing machines via word transformations	59
4.8 An aside on word problems in algebra	61
4.9 Turing machines and first-order logic	62
4.10 Turing completeness	64

4.11	Feasible computation	65
4.12	NP problems and NP-completeness	66
4.13	Suggestions for further reading	67
5.	Gödel's Incompleteness Theorems	68
5.1	Peano Arithmetic	69
5.2	Gödel numbering (or arithmetization of syntax)	70
5.3	Representability of computable relations	75
5.4	Gödel's First Incompleteness Theorem	77
5.5	Robinson arithmetic and essential undecidability	79
5.6	Concrete incompleteness: the Paris-Harrington theorem	81
5.7	The Second Incompleteness Theorem	81
5.8	Suggestions for further reading	82
6.	Computability in Practice	84
6.1	Introduction	84
6.2	Development	85
6.3	Interactive theorem-proving	88
6.4	The Curry-Howard isomorphism	88
6.5	Quis custodiet custodias?	90
6.6	A few of the very many results	91
6.7	Producing correct programs	92
6.8	Concluding remarks	92
6.9	Suggestions for further reading	93
7.	Set Theory	94
7.1	Axiomatizing set theory	94
7.2	Other axioms of Zermelo-Fraenkel set theory	95
7.3	Ordinal numbers	100
7.4	Cardinal numbers	101
7.5	The Continuum Hypothesis	104
7.6	Consistency of the Axiom of Choice	105
7.7	Independence of Axiom of Choice and Continuum Hypothesis	107
7.8	Inaccessibles	112
7.9	Recursion	114
7.10	Suggestions for further reading	115
8.	Beyond First-order Logic	116
8.1	Second-order logic	116
8.2	Infinitary logic	121
8.3	Cardinality quantifiers	125
8.4	Suggestions for further reading	128
9.	Further Topics	129
9.1	Computability and logic	129
9.2	Intuitionist logic	131
9.3	Category theory and logic	136

9.4 Free logic	138
9.5 Modal logic	140
9.6 Final remarks	142
9.7 Suggestions for further reading	142
